THE SOLAR SYSTEM

The solar system is composed of the Sun, the eight planets with their moons, and a number of comets and asteroids. The planets rotate on their axes, and at the same time revolve around the Sun in a counter-clockwise direction, in elliptical paths, or orbits, at varying distances from the Sun. They are held in their orbits by the centrifugal and centripetal forces resulting from their revolution around the Sun. The point nearest the Sun in the orbit of a planet is its Perihelion; the farthest, its Aphelion. The orbits of Uranus and Neptune are too large to be shown in their true proportions on this diagram.

THEORY OF THE SEASONS
(Northern Hemisphere)

The Zodiac is that portion of the heavens eight degrees on either side of the ecliptic, or apparent path of the Sun, and includes the orbits of all the planets. It is divided into twelve equal parts or signs, each named for a constellation of stars.

The Earth advances thirty degrees every month in one of these signs. This causes the Sun to do apparently the same thing in the opposite sign. Thus, when the Earth appears to be in Scorpio the Sun appears to be in Taurus, the opposite sign.

The axis of the Earth always points in the same direction. This, together with the curvature of the Earth, causes the surface to be heated unevenly in different latitudes at the same time. As the Earth revolves about the Sun, the heat received in each latitude varies, causing the seasons.

The Earth revolves around the Sun at about 19 miles a second, and makes one complete revolution in 365 days, 5 hours, 45 minutes, 45.51 seconds. This constitutes a solar year. A calendar year is 365 days. One day is added every fourth year to make up for the odd hours in the solar year.

Chronological Review

232 B.C.—Archimedes propounded law governing the flotation of bodies in liquids and gases.

1766—Properties of "inflammable air" or hydrogen, demonstrated by Henry Cavendish in England.

1783—June 5—Joseph and Etienne Montgolfier, at Annonay, France, successfully flew hot air balloon in public. It rose to height of 6,000 ft. and traveled 1½ miles.

Aug. 27—Hydrogen balloon constructed, at Paris, by Prof. Charles, the physicist, flew 15 miles.

Sept. 19—A Montgolfiere, as the hot-air balloons were called, made an ascent carrying a cock, a duck and a sheep. The animals were landed two miles away without injury.

Nov. 21—Des Roziers and the Marquis d'Arlandes made the first human flight. They flew over Paris, remaining in the air about 25 minutes and traveling 1¾ miles.

Dec. 1—Prof. Charles and M. Robert, at Paris, made the first human ascent in a hydrogen balloon, descending at Nesle, a distance of 25 miles. After dropping his passenger, Charles then soared to a height of two miles.

1784—July 17—First balloon ascent in America made by Peter Carnes at Baltimore, Md.

1785—Jan. 7—Jean Pierre Blanchard, one of the great pioneer balloonists, and Dr. Jeffries crossed the English Channel.

1794—The French revolutionary armies used a balloon for reconnaissances in their campaigns against the Austrians. The size of balloons, however, and the difficulties of transportation and inflation limited their usefulness as engines of war.

1821—Aug. 19—Charles Green made the first ascent in a balloon filled with coal gas at the coronation of King George IV. Since then, with few exceptions, hydrogen gas has been used only for dirigibles.

1836—Nov. 7—Green, Robert Holland and Monck Mason, flew from London to Weilburg, Germany, 500 miles away, in 18 hours.

1850—A model airship, shaped like a torpedo and driven by a screw propeller, was exhibited and flown at Paris, by the builders, Julien and Giffard, of France.

1852—Sept. 23—Giffard made a flight in an elongated balloon steered by a rudder and propelled by a steam engine driving a screw. It was the first successful dirigible, or steerable balloon.

1870—Autumn—Numerous escapes by balloon were made from Paris which was under siege. On Nov. 24, two aeronauts leaving there were caught in a gale which landed them 13 hours later in Norway, 600 miles away.

1872—Harlein, in Germany, built a dirigible driven by a gas engine, which drew its fuel from the balloon itself.

1873—Oct. 7—The first attempt to cross the Atlantic made by Donaldson, Ford and Lunt in the balloon "Graphic" from Brooklyn, N. Y. They landed at New Canaan, Conn.

1884—Aug. 9—Capts. Renard and Krebs, of the French Army, experimented with an electrically propelled airship, La France, making for the first time, a complete circle in the air.

1891—Lilienthal, Germany, began experimental glider flights near Berlin, Germany.

1895—P. S. Pilcher, England, experimented successfully with gliders in England.

1896—June—Octave Chanute, assisted by A. M. Herring and Avery, made successful glider flights in the sand dunes of northern Indiana.

1897—May—Auguste Andrée of Sweden and two companions in a large balloon took off from Dansk Gatt, northwest of Spitzbergen, in an attempt to fly to the North Pole. Their bodies were found on White Island, during the summer of 1930.

1898—Count Ferdinand von Zeppelin, Germany, began construction of his first rigid airship.

Sept.—Alberto Santos Dumont, Brazil, attempted his first flight in a non-rigid dirigible at Paris.

1900—Orville and Wilbur Wright experimented with gliders.

July 2—Zeppelin's first airship made its trial flight from its floating hangar on Lake Constance near Friedrichshafen, Germany.

1901—Oct. 18—Santos Dumont, in No. VI, won the prize of £4,000 for the first person to make a journey by air from the Aero Club Park around the Eiffel Tower, and back within 30 minutes.

1902—The Jaune, a semi-rigid dirigible built by the French engineer Julliot for the Lebaudy brothers, made 29 successful voyages within a year.

1903—Dec. 17—The first flight in a heavier-than-air, motor-driven plane was made by Wilbur and Orville Wright, United States, at Kitty Hawk, N. C.

1905—Sept. 26—First officially recorded flight was made by Orville Wright at Dayton, Ohio. He flew 11.12 miles in 18 minutes, 9 seconds.

Oct. 5—The Wright Brothers flew for a distance of about 25 miles in 38 minutes.

1906—Sept. 13—Santos Dumont, in France, made the first officially recorded airplane flight in Europe.

1908—March 29—Henry Farman made the first recorded flight with a passenger.

April 10—Leon-Lelagrange made the first recorded flight in Europe of more than a mile.

June—The LZ-4 remained in the air 12 hours, covering a distance of 270 miles.

July 8—Madame Peltier, taken up by L. Delagrange, was the first woman to fly.

1909—July 25—Louis Bleriot, France, flew the English Channel from Baraques to Dover, 32 miles.

July 30—The Wright airplane successfully completed the U. S. Government test, and was accepted by the War Department.

1910—Zeppelin completed his first passenger airship, the LZ-7. It had a speed of 45 miles per hour and made many successful trips. In the same year the German Air Travel Company was formed, which ran regular town to town services as well as excursions. In the first three years four air liners made 760 flights totalling nearly 100,000 miles, and carried 14,000 passengers without mishap or injury.

Jan. 25—The first airplane exposition was held at Bruxelles (Brussels), Belgium.

May—Glenn H. Curtiss flew from Albany to New York, a distance of 143 miles, in 2 hours, 50 minutes.

June—Glenn H. Curtiss made a successful landing on water at Hammondsport, New York.

Sept. 12—Ralph Johnstone set world's record for duration and distance by flying 101 miles in 3 hours, 14 minutes.

Sept. 23—Georges Chavez, France, flew across the Alps from Brig, Switzerland, to the Domodossola Valley, Italy.

Oct. 5—Walter Wellman and a crew of five attempted a transatlantic flight in a non-rigid dirigible. The start was made at Atlantic City, N. J. Three days later the crew was picked up by a steamer about 800 miles out at sea.

Dec. 30—Labuteau, France, made a non-stop flight at Buc, France, of 382 miles.

1911—The first airmail in the United States was carried from the Nassau Boulevard Airdrome, Long Island, to Mineola, Long Island.

Jan.—A list of certified pilots, 7 years after the Wright brothers had demonstrated the practicability of flight, showed France with 353; England, 57; Germany, 46; Italy, 32; Belgium, 27; and the United States with 26.

# of Aviation History

Jan. 29—McCurdy, United States, flew from Key West, Florida, to the shore near Habana, Cuba, a distance of 100 miles in 2 hours.

April 12—M. P. Prier, France, made the first non-stop flight from London to Paris, 250 miles, in 3 hours, 56 minutes.

Sept. 17—C. P. Rodgers started on the first flight across the United States, landing at Pasadena on November 5, after numerous forced landings.

1912—Airplanes were used in the Balkan Wars.

July 12 to Aug. 8—Lt. Andreadi flew from Sevastopol, U.S.S.R., to Leningrad (St. Petersburg), U.S.S.R., by way of Odessa, a distance of 1,860 miles.

Dec. 14 to Jan. 24—Janus flew from Omaha, Nebraska, to New Orleans, Louisiana, 1,975 miles.

1913—R. C. Fowler flew across the Isthmus of Panama in the Canal Zone.

April 15—Daacort made a non-stop flight from Paris to Berlin, 542 miles.

June—M. Brindejonc flew from Paris to Warszawa (Warsaw), Poland, 930 miles, in 11 hours.

June—B. des Moulinais, France, flew from Paris to Leningrad (St. Petersburg) and returned by way of Stockholm and Köbenhavn (Copenhagen).

Sept. 23—R. G. Garros, France, flew from St. Raphael, France, to Bizerte, Tunisia, 558 miles.

Dec.—Jules Vedrines, France, flew from Paris to Cairo, Egypt, covering about 3,500 miles.

1914—The event of the World War caused airplanes to be used for the first time on a large scale.

1917—Nov. 21—A Zeppelin left Jamboli, Bulgaria, to carry medical supplies to the army in German East Africa. When over Victoria Nyanza a radio message informed her that her destination had been captured by the British. The ship turned back and landed safely at Jamboli four days after the start, having made a non-stop flight of 5,500 miles at an average speed of 57 miles per hour.

1918—May 15—The first regular airmail service in the world was established between New York and Washington, D. C.

Dec. 13 to Jan. 16, 1919—Maj. McLaren and Gen. McEwen, England, flew from London to Calcutta, India.

1919—April 4—Lt. Cortinez, Chile, flew across the Andes Mountains, South America.

April 19—Capt. E. F. White, United States, made a non-stop flight from Chicago to New York, 727 miles.

May 16 to 31—Lt. Commander A. C. Read, U. S. Navy, in the flying boat N-C-4, made the first transatlantic flight from Newfoundland to Portugal by way of the Azores. He arrived in Plymouth, England, on the 31st.

May 18—H. Hawker and M. Grieve, England, attempted a transatlantic flight from St. Johns, Newfoundland; engine trouble forced them to alight 1,200 miles out where they were picked up by the Danish steamer "Mary."

May 24—Lt. Roget, France, made a non-stop flight from Paris to Morocco, 1,375 miles.

June 14—John Alcock and A. W. Brown, England, made the first non-stop flight across the Atlantic Ocean from St. Johns, Newfoundland, to Clifton, Ireland, in 16 hours and 12 minutes, thereby winning the *Daily Mail* $50,000 prize.

July 2—The R-34, British dirigible commanded by Maj. G. H. Scott, was the first lighter-than-air craft to make a non-stop transatlantic flight from Edinburgh, Scotland, to New York, 3,120 miles. On July 9th it returned to Polham, England, without mishap, a distance of 3,200 miles.

Nov. 12 to Dec. 10—Capt. Ross Smith, England, flew from London to Darwin, Australia, 11,500 miles.

1920—Feb. 14 to May 31—Lieutenants Masiero and Ferrari, Italy, flew from Roma, Italy, to Tokyo, Japan, a distance of about 12,000 miles.

March—Captain Ryneveld and Major Brent flew from Cairo, Egypt, to Cape Town, Union of South Africa.

July 7—The Radio Compass was used for the first time to direct the movement of aircraft.

July 15 to Aug. 24—Four U. S. Army Flyers, led by Lieutenant Street, flew from New York to Nome, Alaska.

Sept. 8—Transcontinental airmail service between New York and San Francisco was inaugurated.

1922—March 30 to June 17—Captains Sacdura and Coutinho, Portugal, flew from Lisboa, Portugal, to Rio de Janeiro, Brazil, by way of the Cape Verde Is., St. Paul Rocks, and Fernando Noronha Is.

Autumn—Walter Hinton, United States, and four companions flew from New York to Rio de Janeiro, Brazil.

Sept. 5-6—Lieutenant J. H. Doolittle, United States, flew from Jacksonville, Fla., to San Diego, Calif., in 21 hours 18 minutes, making one stop.

Nov. 3-4—Lieutenants Kelly and Macready, United States, made a non-stop flight from San Diego, California to Fort Benjamin, Harrison, Indiana, a distance of 2,060 miles.

1923—May 2-3—Lieutenants Kelly and Macready made a non-stop flight from New York to San Diego, 2,516 miles, in 26 hours, 50 minutes.

1924—April 6 to Sept. 28—United States Army Aviators, in four Douglas transport planes, left Seattle on round-the-world flight by way of Alaska, Japan, India, Persia, Iraq, Turkey, Austria, England, Greenland, and Newfoundland. Two completed the distance of 27,553 miles safely. Actual flying time 371 hours, 11 minutes, over a period of 175 days.

April 24 to May 20—Lieutenant P. Doisy and B. Vesin, France, flew from Paris, France, to Shanghai, China, a distance of 11,500 miles.

June 23—Lieut. Russell Maughan, U. S. made a "Dawn to Dusk" flight from New York to San Francisco.

July to Oct.—Major P. Zanni, Argentina, flew from Amsterdam, Netherlands, to Tokyo, Japan.

Oct. 12-15—The German dirigible ZR-3 (now the Los Angeles), commanded by Dr. Hugo Eckener, made a non-stop flight from Friedrichshafen, Germany, to Lakehurst, N. J., 5,066 miles, in 81 hours, 17 minutes, and was delivered to the U. S. Navy officials.

1925—Feb. 25—Captains Arrachart and Lemaitre, France, flew from Etampes, France, to Villa Cisnèros, Rio de Oro (Africa), a distance of 1,987 miles.

April 21 to Nov. 9—Commander Francesco de Pinedo, Italy, flew from Roma to Japan and return, by way of Melbourne, Australia, 35,000 miles.

June, July—Captain D. MacMillan used airplanes to aid in the exploration of the Arctic.

August—Ebe and Kawachi, Japan, flew from Tokyo, Japan, to Moskva (Moscow), U.S.S.R.

Aug. 31—Commander J. Rodgers, U. S. Navy, established a non-stop record for seaplanes by flying from San Francisco, California, to the vicinity of Honolulu, Hawaii, a distance of 1,992 miles.

Sept. 28 to Oct. 4—The first American commercial reliability tour for airplanes was flown by 17 commercial planes.

Nov. 16 to March, 1926—A. J. Cobham, England, flew from London, England, to Cape Town, Union of South Africa, 8,000 miles.

1926—Jan. 22 to Feb. 10—Commander Franco, Spain, flew from Spain to Buenos Aires, Argentina, by way of the Canary and Cape Verde Islands; a distance of 6,230 miles.

(*Continued on next page*)

Chronological Review

(Continued from preceding page)

April to May 13—Captains Loriga and Gualarza, Spain, flew from Madrid, Spain, to Manila, Philippine Islands, 11,000 miles.

May 9—Commander R. E. Byrd and Floyd Bennett flew from Kings Bay, Svalbard (Spitzbergen), to the North Pole and return in 15 hours.

May 11 to 14—The Amundsen-Ellsworth-Nobile expedition flew the semi-rigid dirigible "Norge" from Kings Bay, Svalbard, over the North Pole, to Teller, Alaska, about 2,700 miles.

June 11 to 17—P. D'Oisy, France, flew from Paris, France, to Peking, China.

June 26-27—Captain Arrachart, France, accompanied by his brother, made a non-stop flight from Paris, France, to Basra, Iraq, 2,675 miles.

June 30 to Oct. 1—A. Cobham, England, flew from London to Australia and back, 28,000 miles.

July 14-15—Captain Girier and Lieutenant Dordilly, France, made a non-stop flight from Paris, France, to Omsk, U. S. S. R., 2,930 miles.

Oct. 12 to Jan. 12, 1927—Lieutenant Bernard, France, flew from Marseille, France, to Madagascar, about 10,000 miles.

Oct. 28-29—Costes and Rignot, France, made a non-stop flight from Paris, France, to Jask, Persia, a distance of 3,313 miles.

Dec. 6 to Feb. 20, 1927—W. Mittelholzer, Germany, flew from Zürich, Switzerland to Cape Town, Union of South Africa, 12,000 miles.

Dec. 21 to May 2, 1927—U. S. Army airplanes made a good-will flight around the Latin-American countries, covering a distance of about 20,000 miles.

1927—Feb. 13 to June 16—Commander Francesco de Pinedo, Italy, made a four-continent flight by way of Africa, South America, North America, through the United States to Newfoundland, and back to Roma, Italy, via the Azores and Portugal.

May 20-21—Col. Charles A. Lindbergh, United States, made the first non-stop flight from the United States to Europe by flying from New York to Paris, a distance of 3,610 miles, in 33½ hours.

June to Sept.—Col. Charles A. Lindbergh made a tour of the United States for the purpose of stimulating interest in commercial aviation. He visited every state in the Union and stopped in 82 of the principal cities, covering a distance of 22,350 miles.

June 4-5—Clarence D. Chamberlin and Charles Levine, United States, made a non-stop flight from New York to Eisleben, Germany, 3,905 miles.

June 15 to 30—Van Lear Black, United States, accompanied by two Dutch pilots, made a flight from Amsterdam to the Dutch East Indies.

June 28-29—Lieutenants L. J. Maitland and A. J. Hegenberger, U. S. Army, made a non-stop flight from Oakland, California, to Honolulu, Hawaii, a distance of 2,400 miles, in 26 hours.

June 28-30—Commander R. E. Byrd, U. S. Navy, with Acosta, Balchen, and Noville, flew from New York to France, making a forced landing at Versur-Mer after missing Paris in a dense fog.

July 14-15—E. L. Smith and E. B. Bronte, United States, made a non-stop flight from Oakland, California, to Molokai, Hawaiian Islands.

Aug. 16-17—The "Woolaroc" with A. Goebel as pilot and Lieutenant W. V. Davis as navigator, and the "Aloha," piloted by M. Jensen with P. Schluter as navigator, were the only two planes to fly from Oakland, California, to Honolulu, Hawaii, in the Dole Prize Race. Two other planes were lost at sea.

Aug. 27 to Sept. 14—W. S. Brock and E. F. Schlee, United States, flew from Harbor Grace, Newfoundland, to Kasaminguara, Japan, 12,300 miles.

Oct. 10 to Apr. 14, 1928—Lts. D. Costes and J. M. Le Brix, France, flew around the world via Africa, S. America, N. America, Asia, and Europe, 36,000 miles. The Pacific was crossed by steamer.

Dec. 18-Feb. 13, 1928—Col. Charles A. Lindbergh made a "good will" tour of Latin America.

1928—April 12-13—Captain Koehl and Baron von Huenefeld, Germany, and Major Fitzmaurice, Irish Free State, flew from Dublin, I. F. S., to Greenly Island, Newfoundland, 2,215 miles, the first westward crossing of the Atlantic by airplane.

April 15-16—Capt. G. H. Wilkins, polar explorer, and his pilot C. B. Eielson, made a non-stop flight from Point Barrow, Alaska, to Svalbard (Spitzbergen), across the Arctic Sea.

May 31 to June 9—The "Southern Cross" with Capt. C. Kingsford-Smith and C. Ulm, Australia, and H. W. Lyon, and J. Warner, United States, flew from Oakland, California, to Sydney, Australia, stopping only at the Hawaiian Is., Fiji Is. and Brisbane, Australia, 7,200 miles.

June 17-18—Miss Amelia Earhart was the first woman to fly across the Atlantic when the "Friendship," piloted by W. Stultz and L. Gordon, successfully negotiated a flight from Trepassey Bay, Newfoundland, to Burry Port, Wales.

July 3-5—Capt. Arturo Farrarin and Maj. Carol P. Delprete of Italy made a non-stop flight from Roma, Italy, to Point Genipabu, Brazil, 4,450 miles.

Aug. 20—Arthur Goebel and Harry Tucker, in the "Yankee Doodle," made a non-stop flight from Los Angeles to New York in 18 hours, 58 minutes.

Sept. 18—Juan de la Cierva of Spain made the first long distance flight in an autogyro when he flew the "Windmill" from London to Paris. The autogyro can ascend and descend almost vertically, and remain practically stationary in the air, as well as fly in the ordinary manner.

Oct. 11-15—The Graf Zeppelin, German dirigible commanded by Dr. Hugo Eckener, made the first commercial transatlantic flight from Friedrichshafen, Germany, to Lakehurst, N. J., carrying 20 passengers. The return trip also was successful.

1929—Jan. 1-7—Five U. S. Army officers in the "Question Mark," established a new endurance record of 150 hours, 40 minutes, by refueling in flight.

March 25-26—Capt. Francisco Jiminez and Capt. Ignacio Iglesias, Spain, flew from Seville, Spain, to Bahia, Brazil, a non-stop flight of 4,200 miles.

May 9—World's altitude record for airplanes, 39,140 ft., made by Lt. A. Soucek, U.S.N., at Anacostia, D. C.

May 25—Curtiss Marine Trophy Race for seaplanes and flying boats won by Lt. W. G. Tomlinson, U.S.N.

May 26—Robbins and Kelly at Fort Worth, Tex., set a refueling endurance record of 172 hours, 31 minutes in the monoplane "Fort Worth."

May 26— World's altitude record, 41,794 ft., made by Willi Neuenhofer, Germany.

June 4—World's altitude record for seaplanes, 38,560 ft., made by Lt. A. Soucek, U.S.N., at Anacostia, D. C.

June 14—The French transatlantic plane "Yellow Bird" flying from Old Orchard, Me., to Paris was forced down by lack of fuel at Oyamers, Spain, after covering 3,128 miles.

June 27-29—Capt. Frank M. Hawks established three transcontinental records by flying from New York to Los Angeles in 19 hours, 10 minutes; returning to New York in 17 hours, 38 minutes; and making the round trip in 44 hours, 4 minutes.

June 30-July 6—Newcomb and Mitchell at Cleveland, O., established a refueling endurance record of 174 hours, 1 minute.

# of Aviation History

July 2-12—L. W. Mendel and R. S. Reinhart in the "Angelino," remained in the air 246 hours, 44 minutes, at Culver City, Cal.

July 8-10—Roger Q. Williams and Capt. Lewis A. Yancy in the "Pathfinder" flew from Old Orchard, Me., to Rome. They were forced down to refuel at Santander, Spain.

July 13-30—Dale Jackson and Forrest O'Brine in the "St. Louis Robin" exceeded the refueling endurance record by nearly 175 hours when they remained aloft 420 hours, 21 minutes at St. Louis.

July 31-Sept. 4—The Graf Zeppelin made its third Atlantic flight from Friedrichshafen, Germany to Lakehurst, N. J., in 95 hours, 23 minutes, carrying 20 passengers. Four days later the dirigible, commanded by Dr. Hugo Eckener, started on a world flight. Stops were made at Friedrichshafen, Tokyo and Los Angeles. The complete flight to Lakehurst took 21 days, 7 hours, 34 minutes, a new record for round-the-world travel by any method. The return trip to Friedrichshafen lowered the record to 20 days, 15 hours, 17 minutes.

Aug. 20—The first all-metal dirigible in the world, built for the U. S. Navy by the Detroit Aircraft Corp., made a successful trial flight at Detroit.

Sept. 15—Squadron Leader H. Orlebar, Great Britain, set a world speed record of 357.7 miles per hour at Calshot, Eng.

Oct. 21—The giant Dornier flying boat DO-X carried 169 persons in a one hour trial flight over Lake Constance, Switzerland.

1930—Mar. 30-Apr. 6—Capt. Hawks flew across the country in a glider which was towed by a plane. He made 19 stops.

Apr. 21—Lindbergh set a new record of 14 hours, 45 minutes for the flight from Los Angeles to New York, making one stop.

Apr. 26-May 2—Col. Lindbergh inaugurated air mail service between the United States, Buenos Aires and Montevideo, Uruguay, over a 7,000 mile route.

May 13—Jean Marmoz and two other Frenchmen flew the 1975 miles from St. Louis, Senegal, Africa, to Natal, Brazil, preparatory to opening of trans-oceanic air mail service.

May 18-June 6—The Graf Zeppelin made an 18,000 mile flight to Spain, Brazil, New York, and back to Friedrichshafen, Germany.

June 4—Lt. A. Soucek, U. S. Navy, set a world altitude record of 43,166 feet at Anacostia, D. C.

June 11-July 4—The Hunter brothers at Chicago set a refueling endurance record of 553 hours, 41 minutes.

June 24-25—Kingsford-Smith, in the "Southern Cross," flew from Ireland to Newfoundland.

July 18-Aug. 26—The British dirigible R-100 flew from England to Montreal and back.

July 21-Aug. 17—Jackson and O'Brine at St. Louis raised the refueling endurance record to 647 hours, 28 minutes.

Aug. 13—Capt. Hawks lowered the transcontinental record from Los Angeles to New York to 12 hours, 25 min., making three stops.

Sept. 5-6—Coste and Bellonte made a non-stop flight from Paris to New York.

Oct. 9-10—Capt. Boyd, Canada, and Lieut. Connor, U.S., flew from Newfoundland to England in the *Columbia*, the ship flown across the Atlantic in 1927 by Chamberlin and Levine.

Development of Aviation in the United States

YEAR	1924	1925	1926	1927	1928	1929
No. of routes	5	6	16	23	46	61
No. of station stops	20	18	56	54	101	197

GEOGRAPHICAL DESCRIPTION OF PRINCIPAL COUNTRIES

AFGHANISTAN

Area. The total area is 245,000 square miles with a population of about 12,000,000.

Afghanistan is peopled by many races, to only one of which the name Afghan is properly applied. This people is the tribe of the Durrani, a race which claims descent from the captive tribes of Israel. Most numerous is the tribe of the Ghilzáis, supposedly of Turkish descent. Other races are the Hazaras, Aimáks, Tájiks, and Uzbeks.

Physical Features. The greater part of Afghanistan consists of mountains and elevated plateaus, the latter nearly all over 4,000 feet with some over 7,000 feet. The principal range is the Hindu Kush, 20,000 feet.

Climate. The climate of Afghanistan is most unpleasantly variable and severe. The summers are intensely hot and dry, and sandstorms are frequent in the southwest. Winters are very cold, and many snowstorms occur.

Government. Afghanistan is a constitutional monarchy. There are a Legislature and State Assemblies, and a Cabinet over which the Amir presides. The country is divided into nine provinces, each under a governor.

Agriculture is largely dependent on irrigation. Two crops a year harvested in most parts, one sown in autumn, consisting chiefly of rice, millet, maize; and the other in spring, consisting of rice, millet, corn, arzna, and tobacco. Fruits are grown in abundance, and form the principal food for many of the people. Vegetable dyes, such as madder and saffron, are grown. The castor oil plant, assafetida, spices, and plants yielding gums (tragacanth, etc.) abound.

Stock-raising is an important industry. Horses, camels, goats, and fat-tailed sheep are numerous throughout the country.

Minerals. Iron, lead, antimony, sulphur and gold are produced. Copper and gems are also found.

Manufactures. The manufactured products are principally for local consumption, though large quantities of wool, sheepskins, silks, rugs, carpets, preserved fruits, rosaries, felts, sheepskin coats, and camels' hair goods are exported.

ALBANIA

Area, about 17,374 square miles, **population** 833,618.

Government. A Monarchy was proclaimed in 1928. The king is assisted in the administration by a council of appointed ministers and one elected chamber.

Industries and Resources. Except in the fertile regions of the Adriatic littoral and the Korytza basin, Albania is mountainous, without railways and with few roads. **Agriculture** is scant and primitive. Tobacco, wool, and olive oil are the chief products Southern Albania has large areas suitable for cotton and dairying.

ALGERIA

Area and Population. Algeria has a total area of 847,307 square miles. Nearly half of this area (to the south) is desert, with a few scattered oases. The total population, including European military forces is 6,066,380. Over five million live in the northern part of the country, along the coast.

Climate. The climate is like that of Spain and Italy, with the temperature equable though generally high. There are considerable variations according to altitude. On the coast lands, the mean annual temperature is about 66° Fahr. On the plateaus and tablelands, however, the winters are often severe. Throughout, a great daily range of temperature is experienced.

Rainfall is light, except immediately on the coast, where rainy and dry seasons alternate. From June to October, the climate is hot and rainless.

Government. Algeria is a French dependency, under the authority of a Governor-General. There is a consultative Council of Government. Each department is represented by one senator and two deputies in the National Assembly in France, which possesses the legislative power over the dependency.

Agriculture. A small area of land along the coast, capable of cultivation, is devoted to vineyards and cereals. Wheat, barley, oats, corn, potatoes, flax, and beans are important. Cotton and tobacco are raised, and silk is cultivated. The principal fruits are oranges, dates, mandarins, citrons, bananas, pomegranates, almonds, olives, and figs. Vast quantities of wine are exported, principally to France. The production of olive oil is also important.

There is considerable grazing area, on which many sheep, goats, mules, neat cattle, horses, camels, and swine are raised.

Forest products consist of cork and timber. Much bark is used for tanning. Forests cover over 10,000 square miles, chiefly in the mountainous country near the coast.

Fisheries are extensive, many varieties of food fish and shellfish abounding in the coast waters. Sardines, allaches, anchovies, sprats, and tunny are the most important species.

Minerals produced are iron, zinc, lead, mercury, copper, antimony, and petroleum. Phosphate rock is also produced in considerable quantities.

Manufactures are undeveloped. The few industries are principally engaged in the preparation of raw products for export. Imitation horsehair fiber is made from the leaves of the dwarf palm. Tobacco and cigars are manufactured for export.

ANDORRA

Area and Population. Andorra totals 191 square miles in area with about 5,231 inhabitants.

Andorra is an autonomous state under joint suzerainty of France and the Spanish Bishop of Urgel, and is governed by a Council of 24 members, which elects a first and second Syndic to administer public affairs. Andorra is the sole survivor of a number of independent medieval valley-settlements in the Pyrenees. The raising of cattle and sheep is the chief occupation.

ANGLO-EGYPTIAN SUDAN

Anglo-Egyptian Sudan is a dependency of Egypt and Great Britain. The chief administrator is a Governor-General, appointed by Egypt with the assent of Great Britain, and assisted by a Council. Administration is carried out under Governors of the 13 provinces, under whom are Inspectors in charge of districts. Capital, Khartoum.

The total area is about 1,008,100 square miles and the population is estimated at 6,469,041.

The principal products are gum arabic and ivory (world's chief supply); others are ostrich feathers, vegetables, cotton, vegetable ivory, dates, sesamé, senna, groundnuts, hides, and gold. Rubber is also obtained. Dura (a kind of millet) is the principal grain raised. Large quantities of cotton are being grown and exported. Cattle trade is increasing rapidly. The forests are rich in timbers (ebony, **gum acacia**, bamboo, fruits, and rubber).

ARABIA

The Arabian Peninsula is an undulating plain, sloping gently from sea-level in the east to over 2,000 feet in the west. Here, in Yemen and Hejaz, many summits exceed 8,000 feet, and the descent to the sea is short and steep. Along the Gulf of Oman hard rock rises, equalling in height the western altitudes, and across the center of the peninsula, in Nejd masses stand up over 5,000 feet.

Nejd is an independent Sultanate in central Arabia, including the Persian Gulf coast district of El Hasa and the former Kingdom of Hejaz and Emirate of Asir. Its boundaries are too indefinite to permit an estimate of its area. Its population is about 3,000,000. It produces dates, wheat, barley, fruit, hides, wool, honey, clarified butter, abas, camels, horses, donkeys, and sheep. Hejaz contains the Holy Places of Islam—Mecca, the birthplace of Mahomet, and Medina, his burial place. The capital of Nejd is Riyadh and the chief seaports are Jidda and Yenbo.

Asir, an Emirate, area 13,857 sq. mi., is now practically a part of Nejd. Population 750,000.

Yemen is an Imamate of some 75,000 square miles with a population of about 2,500,000. Its capital and chief city is Sana.

Aden Protectorate, including Aden, has an area of about 9,000 square miles with a population of 100,000. Its chief industries are the manufacture of salt and cigarettes. Capital, Aden.

Hadramut, on the southeast coast, has no king, the area being under loose British control.

Oman is a Sultanate in southwest Arabia now controlled by Great Britain. It has an area of 82,000 square miles, and a population (chiefly Arabs) of about 500,000. Maskat is the capital and the only port of call.

Kuweit is a Sultanate on the Persian Gulf, whose Sultan is subsidized by Great Britain. Its population is estimated at 50,000.

Bahrein Islands, off the coast of El Haza, are ruled by an Emir, under the protectorate of Great Britain. They comprise five islands, with population estimated at 120,000. Pearls, sail cloth, and reed mats are produced.

ARGENTINA

Area and Population. The area of Argentina is estimated at 1,153,119 square miles, giving it rank next to Brazil in size among the republics of South America. Population numbers 10,850,000 of whom about one-fourth are Italians, many with large industrial interests.

Physical Features. The greater part of the surface consists of grassy plains. In the center and east is the region of the pampas—vast, level, almost treeless expanses covered with tall grass. North of the pampas are the plains of Entre Rios, between the Paraguay and Uruguay rivers, and those of the Gran Chaco, reaching to the western highlands and northward to Paraguay and Bolivia, diversified by minor mountain ranges.

The western part of Argentina merges into the Cordilleran system of the Andes, comprising two nearly parallel ranges, the western and loftier forming the greater part of the boundary with Chile. The culminating peak of the entire system, and the highest peak in South America, is the extinct volcano Mount Aconcagua (22,985 feet).

The three principal rivers of Northern Argentina are the Paraná, Paraguay, and Uruguay.

Argentine Patagonia lying south of 39° S. lat., is a region of high, undulating plateaus rising in successive terraces, and dissected by many valleys and ravines.

Climate. Except for a small tract in the extreme north, the Republic lies wholly in the temperate zone. In the north, the climate is oppressively hot; on the pampas, temperate, but subject to droughts; in the extreme south, cool. Rainfall in general decreases from north to south, and from east to west. At Buenos Aires, the mean annual temperature is 63°, ranging from 50° in July to 75.6° in January, and the average annual rainfall is 34 inches.

Government. Executive power is vested in a President, who is chosen for a six-year term by provincially appointed electors, and assisted by a Cabinet of eight Ministers. The President and Vice-President must be Roman Catholics and Argentines by birth, and are not eligible to immediate re-election. Legislation power rests in a Congress of two elected houses.

Agriculture. Pastoral and agricultural industries are the chief sources of wealth, especially large areas being devoted to wheat. Other principal crops are corn, oats, and flaxseed. Sugar, cotton, tobacco, and grapes are also grown, and wine is made in large quantities.

Argentina is almost unrivaled as a grazing country, vast herds of beef and dairy cattle, sheep, horses, goats, and pigs being reared.

Forests. About 20 per cent of the area of the Republic is forest-covered, the main timber supply being in the Gran Chaco region. The principal trees are the Antarctic beech, Chilean "pehuen," apple, wax-palm, mimosa, quebracho, and "incense tree."

Minerals. Gold, silver, copper, tungsten ore, coal, and petroleum are worked, but the mining industry has been but little developed.

Manufactures. Argentina has made notable progess in manufactures. Sugar, liquors, flour, and animal products are the leading items. There are immense establishments engaged in slaughtering cattle and sheep for freezing, canning, and export. Most of the frozen beef and mutton is shipped to British markets.

Buenos Aires is the chief commercial center, and the largest South American city.

AUSTRALIA

Area and Population. Australia, smallest of the continents, comprises 2,974,581 square miles, including Tasmania. The population is 6,363,219.

Physical Features. Except for the Great Dividing Range along the entire east coast, and a few straggling ranges in the interior, Australia is generally flat. From Lake Eyre, 36 feet below sea level, the land rises gently, forming a low plateau, 1,000 to 2,000 feet high in the western half of the continent, surrounded on three sides by a low coastal plain. The interior depression is broken by many uplifts of moderate height, but, especially in west, consists mainly of level or rolling sandy and stony desert covered with spinifex and containing many salt marshes, with occasional reaches of grassland. The Great Barrier Reef, 60 miles off shore, parallels the east coast for 1,250 miles south from Torres Strait.

Nearly all round the mountainous coast, and in the east and southeast, stretching far inland from the coastal range, lie fertile, well-watered slopes forming the great pastureland of Australia.

The only great river system is that of the Murray and its tributaries, the Darling, Murrumbidgee, and Lachlan, rising on the western slope of the Alps. The largest lakes are Eyre and Gardner in South Australia, both brackish and shallow.

Climate. Since the northern third of Australia is within the tropics, the temperature is generally high, the annual mean ranging from 45° in the south to 80° in the north. On the whole, the climate is dry and healthful. In summer, the average temperature ranges from 60° to 95° and over, but along the coast the extremes are greatly modified by the ocean, and the annual range is small. In the southeast, the most populous region, the range is between 85° and 40°, though extremes of 110° and 27° have been recorded. The northern and eastern coasts have heavy rainfall, which diminishes to 5 inches and less in parts of the interior plateau, and rises along the south and west coasts to 10 to 20 inches.

Government. Australia is a self-governing Dominion. Executive power is vested in the Governor-General who acts under the advice of an Executive Council. Legislation is in the hands of a Federal Parliament consisting of the King's Representative, a Senate, and a House of Representatives, the latter two elected by universal adult (male and female) suffrage.

Each State (except Queensland, which abolished its Upper House) has a separate Parliament of two Houses, retaining residuary power of government over its own territory somewhat after model of the United States. The chief State executive is the Governor, assisted by a Lieutenant-Governor and a responsible Cabinet.

Agriculture. Australia is a great wheat and live-stock country. Other cereals are oats, corn, barley. The yield per acre of grains, though comparatively low, is increasing. Hay, potatoes, sugar-cane, and grapes are important crops. Tobacco and large quantities of fruit are raised.

The most important branch of agriculture is stock-farming. Great areas in the south, west, and northeast are particularly well adapted for sheep raising, and Australia's production of wool is of great importance in the world's markets. Sheep provide also other important export products, such as tallow, skins, and frozen meat. The raising of cattle, horses, and pigs is of relatively minor importance.

Much of the interior is agriculturally irredeemable, but vast semi-arid areas are being brought under cultivation by irrigation.

Forests cover about 153,000 square miles, the important timbers being eucalyptus, pine, cedar, mahogany, rosewood, gum, sandalwood, etc.

Fishing. Food fishes are numerous. Pearl-shell fishing is most profitable on the west, north, and northeast coasts.

Minerals. Gold (first discovered near Bathurst, N. S. W., 1851) is found in all parts of Australia. Western Australia, until 1885 thought to be without gold, has become the chief gold-producing State. Here are the famous Coolgardie and Kalgoorlie fields, scene of a rush in 1892–93 like that to the Klondike in the Canadian Yukon in 1897. Large coal fields have been opened; silver, lead, copper, tin, and zinc are also produced and exported. Tasmania is the world's chief source of supply of the rare platinum metal osmiridium. Other minerals are iron, nickel, cobalt, tungsten, manganese, mercury, antimony, bismuth, alum, asbestos, marble, and various gems.

Manufactures. Manufactures, though relatively not extensive, are of increasing importance. Among manufactured exports are smeltings, frozen and preserved meats, butter, skins, leather, and metal goods. Flour mills and sawmills are thriving.

AUSTRIA

Area and Population. Total area is 32,360 square miles. Pre-war area, 115,903 square miles. Population, 6,686,600, pre-war 28,574,155.

Physical Features. Austria is one of the most mountainous countries of Europe, three-fourths of its surface consisting of mountains or hills—mainly offshoots of the lofty Eastern Alps, which extend eastward to the valley of the Danube. The principal rivers are the Danube, the Drava, and the Adige. The Neusiedler See is a large, shallow lake which occasionally dries up.

Climate. Owing to its inland location and striking irregularities of surface, Austria has climate of great diversities. In the west the modifying influences of the Atlantic and Mediterranean are felt, but toward the east the range between extremes becomes greater. The climate, on the whole, is that of the temperate zone, but ranges to Arctic conditions on the Alpine heights. The mean annual temperature at Wien (Vienna) is 48.8°. Rainfall is adequate for all agricultural purposes, but decreases toward the east.

Government. Austria is a federal, democratic republic. Legislative power is vested in a Federal Diet of two houses —an assembly (*Nationalrat*) popularly elected for 4 years, and an advisory First Chamber (*Bundesrat*) chosen by the Provincial Diets. The President is elected for 4 years, by the two houses in joint session, and may be re-elected once only. Each "Land" or Province has its own popular Diet, and each Commune has its own Council.

Agriculture is the main occupation of the people of Austria, about 20 per cent of the total area being under cultivation. Foodstuffs produced, however, are insufficient for domestic needs, and imports of food are necessary. The principal grains, in order of volume, are rye, oats, wheat, and barley, and large quantities of potatoes and turnips are grown. The vine is extensively cultivated, and much wine produced. The principal live stock raised are horses, oxen, and beef and dairy cattle, the richest grazing lands being in upper Styria, Salzburg, and Tyrol. **Forest** wealth is abundant. **Minerals** are important, chiefly the rich deposits of anthracite coal, lignite, and iron. Copper, zinc, silver and gold ore, lead, and salt are also produced. **Manufactures:** Valuable industries are still carried on in new Austria, including the manufacture of pianos, motor cars, textiles, clothing, jewelry, leather, furniture, metal wares, etc. There are also blast furnaces producing annually about 500,000 tons of pig iron.

BAHAMA ISLANDS

This is a group of twenty inhabited and many uninhabited islands and rocks off the southeast coast of Florida. The total area of the islands is 4,396 square miles; population, 60,367. The climate of the Bahamas makes the islands a favorite winter resort for tourists. The Governor is assisted by an Executive Council, a Legislative Council, and an elected representative Assembly. Fruit culture is extensive, the products chiefly pineapples, oranges, and tomatoes. Turtle, sponge, and pearl fisheries are carried on extensively. Lumbering, pineapple canning, and the manufacture of sisal are the chief manufacturing industries.

BALUCHISTAN

Area and Population. The area totals 134,638 square miles. Inhabitants number 799,625, comprising many tribes, the most numerous races of which are the Bráhui, Pathan, and Baluchi.

Climate. Baluchistan is subject to great variations in temperature, especially in the mountains. In summer it is the hottest country of the continent, though the winters are comparatively cold.

Government. Since 1876, British control has gradually been extended. The country is divided into three main divisions: British Baluchistan proper, British Agency Territories, and the Native States of Kalát and Las Bela.

The British and administered territories are under an Agent to the Governor-General. The Native States of Kalát and Las Bela are each governed by a Chief, who is amenable to the advice of the Agent to the Governor-General.

Agriculture. Owing to the mountainous and largely arid nature of the country, agriculture is confined to valleys. Grains, fruits, and potatoes are grown where climate and soil permit. Sheep, goat, horse, camel, buffalo, and cattle grazing is extensive.

Minerals. Mineral resources are undeveloped. Coal and salt mines are worked, and iron, lead, copper, asbestos, chromite and petroleum are found.

Manufactures are unimportant. Felts, blankets, rugs, leatherwork, needlework, and pottery are the principal products.

BASUTOLAND

A territory under British jurisdiction, with an area of 11,716 square miles; population, 498,781 including 1,603 Europeans.

A Resident Commissioner governs the territory under the direction of the High Commissioner for South Africa. Native chiefs preside over the districts. Capital, Maseru. European settlement prohibited. Rainfall is abundant and the climate pleasant.

Products are wool, wheat, mealies, and Kaffir corn. Very fertile tracts abound. Coal, iron, and copper occur. Large herds of cattle are raised on the extensive pasture lands.

BECHUANALAND

A British protectorate lying south of Rhodesia and west of Transvaal. Area, 275,000 square miles; population, 152,983 (1,743 Europeans). The country is occupied by tribes under native chiefs. A Resident Commissioner directs the government from Mafeking (in Cape Province), with the advice of the High Commissioner. Two Assistant Commissioners reside in the protectorate.

Products are maize, Kaffir corn, and cattle. Large numbers of cattle are exported, chiefly to the Transvaal. Gold and silver are mined in small quantities.

BELGIUM

Area and Population. The total area is 11,780 square miles, supporting a population of 7,995,558.

Belgium is the most densely populated country of Europe (680 per square mile). French and Flemish are the official languages.

Climate. Belgium enjoys a cool and temperate climate, much similar to that of Holland.

Government. Belgium is a constitutional monarchy, governed by the King, Senate, and Chamber of Representatives. The Senate is elected in part directly by the people, and in part indirectly by the provincial councils. The lower house is elected by direct vote.

Agriculture. The Agricultural districts are mainly in the north and west, the chief products being oats, rye, potatoes, wheat, barley, and beets. Dairying is well developed.

Forests. Though large areas were deforested by the waste of war, there is still much timber land in Belgium.

Fisheries. The annual catch consists principally of herring.

Minerals and Manufactures. The mines and manufactures provide a livelihood for the majority of the population. From Mons to Liége stretch the great coal fields which have attracted the extensive metal industries for which the country is famous. Iron, copper, zinc, and lead are also mined.

The principal manufactured products are pig iron, steel, motor cars, glass, artificial silk, lace, linen, and gloves. There are also many sugar manufactories, distilleries, and refineries.

Colonies. Belgian Congo, with an area of 920,656 square miles and a population of 8,723,276, includes most of the region drained by the Congo River and its many tributaries. In its extensive forests Belgium has an almost unlimited supply of forest and mineral resources, both of which are being extensively developed. The chief products are rubber, palm-nuts and palm-oil, ivory, rice, cotton, coffee, tobacco, gold, copper, gems, and lumber.

BERMUDA

The British Colony of Bermuda, consisting of a group of 360 small islands 580 miles east of North Carolina, comprises an area of 19 square miles; population 30,814. The Bermudas are noted for their climate and scenery, and are a famous winter and summer resort. The mean annual temperature is 70°, the thermometer never registering below 40°. Government is administered by a Governor, assisted by an Executive Council, a Legislative Council, and a representative House of Assembly. The chief products are vegetables (onions, potatoes, etc.) and lily-bulbs. Bermuda is an important naval base. Chief town, Hamilton.

BHUTAN

The State of Bhutan is governed by a hereditary Maharaja; but control of foreign relations was surrendered to Great Britain in 1910. The area is 18,000 square miles; population 300,000, almost all Buddhists. Cereals, wax, lac, musk, and silk chief products. Ponies are raised. The forests are valuable. Cloth and silks, leather, gums, and swords, are the chief manufactures.

BOLIVIA

Area and Population. The Republic of Bolivia has an area of about 514,464 square miles. It has no coast, being inclosed on the north and east by Brazil, on the south by Paraguay and Argentina, and on the west by Chile and Peru. Its boundary with Paraguay is undetermined. The population is estimated at 2,911,283, about 50 per cent being Indians (of whom very few are civilized), about 12½ per cent whites, and the remainder chiefly negroes.

Physical Features. In the west is a mountainous region traversed by ranges of the Andes system, the tableland between them, 60 to 150 miles wide, constituting the loftiest and largest plateau in the Western Hemisphere. The eastern and northern parts of the Republic comprise the Montaña region, sloping down from the Cordilleras to a vast plain merging into the Amazon basin, and with pampas toward the south merging into the Gran Chaco. The only important rivers are in the eastern section. In the southeast, the Paraguay and Pilcomayo rivers cross the frontier, flowing southward to their Atlantic exit through the Rio de la Plata. Practically none of the drainage of Bolivia flows into the Pacific.

One of the wonders of the Andes Mountains is Lake Titicaca, nestling on the lofty plateau on the border between Bolivia and Peru. This lake lies at an elevation of 12,545 feet and its area is 3,261 square miles.

Climate. As in other Andean regions within the tropics, climate in Bolivia ranges from tropical to arctic. On the hot, moist eastern slopes of the Cordilleras the mean annual temperature, up to a height of about 2,500 feet, is about 74°; at 8,000 to 8,500 feet elevation, it drops to about 66°; and on the central tableland at 11,900 to 12,500 feet, it drops to 50°.

Dry and wet seasons alternate—the wet or summer season lasting from December to May; the dry or winter, from June to November. Most of the rain falls on the eastern side of the mountains.

Government. Executive power is vested in a President elected for a four-year term; legislative, in a National Congress of two chambers, both elected by direct, universal suffrage.

Agriculture. About 5,000,000 acres of land are estimated to be under cultivation in Bolivia. Potatoes, coffee, cacao, and sugar-cane flourish in the valleys and plains of the east. In the temperate uplands, fruits, cereals, and vegetables are extensively cultivated, wheat, maize, barley, beans, and potatoes being grown chiefly for home consumption. On the pampas and the uplands is abundant pasturage for the great herds of live stock.

Forests. The dense forests of the Montaña region abound in valuable cabinet woods and dyewoods—ebony, mahogany, rosewood, satinwood, cedar, wax, cork, and varieties of palms. Among the many medicinal plants are the cinchona tree (yielding Peruvian bark, from which quinine is extracted), jalap, coca, and sarsaparilla. In the northerly regions draining into the Amazon, valuable rubber forests occupy a large area.

Minerals. Bolivia is amazingly rich in minerals. Almost all the known metals are found. About one-fourth of the world's total supply of tin comes from Bolivia. Silver is another metal contributing much to the wealth of the country. Ores of tungsten, lead, copper, antimony, bismuth, and zinc are also exported. Platinum is found. There are large deposits of salt, and petroleum fields have been located at different points.

Manufactures. Manufacturing industries in the Republic are comparatively few, being limited chiefly to the supply of local needs.

Sucre is really the capital of the Republic, but the present seat of administration is La Paz. The latter also is the chief commercial city of Bolivia. Cochabamba is capital of a rubber producing province and has also several flour mills.

BRAZIL

Area and Population. The area of Brazil, including the Acré Territory acquired by purchase from Bolivia in 1902, is 3,285,319 square miles. The Republic has a population of 40,272,650. Italian, Portuguese, and Spanish immigration has been the greatest. The white people, largely of Portuguese descent, with Italian, German, and Russian accessions, predominate in the south; the Indians in the north. Negroes are numerous in the eastern states.

Climate. With the exception of its three southern states, Brazil lies entirely within the torrid zone. The northwestern lowlands and plateaus, and most of the Coastal Plains have a high temperature throughout the year, with two distinctly marked seasons—the wet and the dry. In the central and southern highlands, the elevation produces a subtropical and temperate climate, while in the extreme south the four seasons of the temperate zone are distinct. The rainfall in the Amazon valley and in the interior is extremely heavy.

Government. The United States of Brazil is governed by a President, elected by the people for a term of four years, assisted by a National Congress of two houses elected by direct popular vote and acting with sanction of the President, the Senate and the Chamber of Deputies.

Agriculture is the leading industry. Coffee is the greatest product, three-fourths of the world's supply coming from the states of São Paulo, Rio de Janeiro, Espirito Santo, and Minas Geraes. Over half of the world's coffee comes from São Paulo alone. Sugar, another great product, is cultivated chiefly in Alagôas, Sergipe, Pernambuco, Bahia, and Rio de Janeiro. Tobacco is widely cultivated in Bahia, Espirito Santo, Minas Geraes, and Goyaz. Cotton is raised extensively in the Atlantic states, and maté, or Paraguay tea, used as a beverage by about 12,000,000 people in South America, is an important product. Cacao, one of the leading exports, is produced in the Amazon Valley. Rice cultivation is extensive, and silk culture is encouraged. Manioc provides a much used coarse flour.

Cattle breeding is important in the south, particularly in São Paulo, where vast numbers of cattle, horses, swine, and sheep are raised. Hides and leathers are heavily exported.

Forest Products. The forests of Brazil are of great value, although but little developed. Rubber is a very large item of export, and is produced chiefly in the Amazon valley. Nuts, vegetable wax, palm fiber, rosewood, dyewoods, medicinal leaves, and resins are obtained.

Minerals are developed only to a fair extent, although the country is rich in gold and other precious metals. Diamonds, coal, and manganese ore are worked, and the major quantity of the world's supply of monazite comes from Brazil. Iron and copper ores, platinum, mica, and talc are also found.

Manufactures are progressing rapidly under a high protective tariff. Textile mills (chiefly cotton), sugar mills, flour mills, boot and shoe factories, and lumber mills are the leading establishments.

BRITISH EAST AFRICA

British East Africa is now only a descriptive name covering various possessions comprising the main portion of the highlands of eastern equatorial Africa.

Kenya Colony (formerly East Africa Protectorate) has an area of about 245,060 square miles; population, 2,891,700 of whom 12,529 are Europeans and 30,503 Asiatics.

Agricultural products are extensive, consisting of rice, maize, cotton, grains and vegetables of temperate zones (grown in the highlands), coconuts, sisal, coffee, cassava, and rubber. Black wattle (a kind of acacia, for tanning) is one of the chief products. Stock raising is also important, principally of sheep and ostriches. Forests cover 3,600 square miles, yielding valuable timber (ebony, cedar, camphor, cork, jarrah, ironwood, olive, etc.).

Minerals are not extensive. Natron, diatomite, graphite, marble, and limestone occur in considerable quantities. Gold, manganese, and opals have been found.

Kenya Protectorate (formerly Zanzibar Protectorate) is a small strip on mainland, nominally under Sultan of Zanzibar.

Zanzibar, largest coralline island of Africa, area 640 square miles, population 216,790, with **Pemba**, area 380 square miles; population 88,691 forms a protectorate administered by a High Commissioner, Resident, and Council. Is chief source of world's supply of cloves. Coconuts also produced. Capital, Zanzibar, is a free port.

Tanganyika Territory (part of former German East Africa), between Kenya Colony and Mozambique, has an area of about 366,632 square miles; population, 4,770,539, mostly Bantus. Coast belt is low; interior mountainous. Forests very extensive—mangroves, cocoa palms, cinchona, etc., on coast; acacia, sycamore, cotton tree, banyan, etc., in uplands. Large areas cultivated. Chief products: millet, bananas, coconuts, cloves, sisal, cotton, sugar, cacao, vanilla, rubber, coffee, rice, hides, butter, wax, ivory, nuts. Goats, cattle, sheep, reared. Mica and gems (garnet, agate, etc.) abound; coal, iron, lead, copper, salt, exist.

Uganda totals 94,204 square miles in area. Population is estimated at 3,265,367 including 640,000 civilized Baganda and 1,289 Europeans. The British representative is the Governor. Native chiefs and kings conduct the administration in the provinces with the advice of the Governor.

The principal products are cotton, sugar, chilis, ghee, coffee, cacao, oil seeds, ivory, hides and skins, rubber, and groundnuts. Of the minerals, iron and copper are abundant. Alum, graphite, coal shale, mica, and gold occur. There are valuable forests.

BRITISH GUIANA

Area and Population. British Guiana has an area of 89,480 square miles. The population of British Guiana, excluding about 9,100 aborigines, is about 309,676, mostly East Indians and negroes.

Climate. The climate of all the Guianas is tropical, though in the higher altitudes in the interior, the heat is less extreme. The northeast trade winds bring a heavy rainfall to the interior highlands.

Government. The colony includes the three settlements of Essequibo, Demerara, and Berbice, so named from the rivers, and is administered by a Governor, assisted by a Court of Policy and a Combined Court (of which the majority of members are elected by the registered voters), and by an Executive Council.

Agriculture. Sugar cane and rice are the staple agricultural products. Others are coconuts, coffee, cacao, rubber, and limes. The livestock industry is important.

Forest Products. Timber, balata, rubber, and shingles are the principal products of the forests.

Minerals. Gold, diamonds, and bauxite are mined and exported.

Manufactures. The manufacture of sugar is the most important industry, though much rum, molasses, and cattle food called molascuit is also manufactured. Charcoal is an important product.

BRITISH HONDURAS

Area. The total area is 8,598 square miles.

Population. There are about 50,286 inhabitants of a mixed nature.

Government. British Honduras is a Crown Colony, administered by a Governor, an Executive Council, and a Legislative Council.

Agriculture is not extensive. Bananas, coconuts, and chicle are grown for export, and other agricultural products are coffee, cacao, plantains, Indian corn, sugar cane, rubber, and tobacco. The higher lands afford good pasturage.

Forests. The staple products of the country are mahogany, cedar, and cabinet woods.

BRITISH SOMALILAND

British Somaliland has an area of about 68,000 square miles, and a population of 347,011 Mohammedans. The exports consist chiefly of skins and hides, cattle, sheep, ghee (clarified butter), gum and resins, and specie. The gold is brought from Ethiopia. The Ethiopian trade through British territory is chiefly by way of Berbera, on southern coast of the Gulf of Aden.

BULGARIA

Area. The area is 39,814 square miles with a **population** of 5,824,900. The dominating **physical feature** is the Balkan Mountains, which begin at the great gorge of the Iron Gates on the Danube, extend south along the eastern Serbian border, and then turn eastward running through the heart of Bulgaria to the Black Sea. North of the Balkans, the surface is a plateau descending to the Danube. South of the mountains are a number of hill-girdled basins with much more advantageous conditions, and in this section the soil is fertile. The **climate** is very dry, with wide range and sudden changes of temperature. **Government:** Legislative power is vested in a single chamber, the Sobranje, elected for 4 years by universal male suffrage. Executive power rests with a Council of Ministers nominated by King.

Industries and Resources. Agriculture employs about two-thirds of the people, but methods are still primitive. About 31 per cent of the total area is cultivated. Wheat and corn are the principal crops, but fruit, wine, tobacco, beet sugar are also produced in considerable quantities, and silkworm culture extensively followed. Roses are cultivated largely on the southern slopes of the Balkans, and much attar of roses is made for export. Live stock are reared in large numbers. **Forest** lands embrace less than a third of the total area of the country. **Minerals** belong to the State. Coal and iron exist in large quantities. Gold, silver, lead, manganese, copper, salt, limestone, marble are also produced. **Manufactures** are chiefly flour, textiles, cord, cigarettes, and attar of roses.

CANADA

Area. The area of Canada is 3,794,723 square miles. This is 81,534 square miles larger than the United States, including Alaska.

Population. The population of Canada is 9,658,000 of which about 28 per cent are French-speaking, and over

50 per cent are of British descent. There are about 105,000 Indians and about 3,300 Eskimos.

Climate. The climate, on the whole, is less severe than latitude would indicate, though extremes are greater than in corresponding European latitudes. Temperature is much modified by proximity to seas and lakes, and by varying elevation. South of the St. Lawrence River, and inland in the Great Lakes region and farther west, the cold is moderated, the mean annual temperature rising from about 40° in the east to about 65° in Alberta. Toward interior, the range of variation in temperature increases, recorded extremes being 108.2° in Alberta, and –79° in Northwest Territories. Along the Pacific, the climate is mild and equable, owing to the warm Japan current.

Rainfall decreases inland, averages ranging from 38.9 inches in Nova Scotia, and 41.1 inches in British Columbia, to 14 to 22 inches in the Prairie Provinces (Manitoba, Saskatchewan, and Alberta), where irrigation is quite extensively practiced.

Government. Canada is the largest self-governing Dominion in the British Empire. As such it enjoys responsible government of the British type, administered by an executive Council (or Cabinet), acting as advisor to the representative of the Sovereign, the Governor-General. This Council is responsible to and possesses the confidence of the representatives elected to Parliament by the people, and gives place to other persons more acceptable to Parliament whenever that confidence is shown to have ceased to exist. Legislative power is exercised by a Parliament of two houses, the Senate and the House of Commons.

Forests. Timber lands rank next to farming lands as a source of national wealth, and measures looking toward timber conservation are being taken. The total forest area is about 1,200,000 square miles, less than half of which is merchantable saw-timber.

Agriculture. The leading industries of Canada are agricultural and pastoral. The Prairie Provinces, including valleys of the Red, Athabaska, Saskatchewan, and Peace rivers, lead in extent of farming lands; but there are also large, rich areas in British Columbia, southern Ontario, the Eastern Townships of Quebec, and the Maritime Provinces. Wheat, hay, and clover are the leading crops, but oats, potatoes, fodder corn, barley, turnips and other roots, rye, mixed grains, alfalfa, corn, buckwheat, flaxseed, peas, beans, tobacco, and sugar beets (in Ontario only) are also important.

Live-stock and dairy interests give Canada high rank, and cheese is a great item of export. Fur farming (especially fox) has become important. Fruit culture is prosperous in Eastern Canada and British Columbia, apples, pears, plums, peaches, apricots, grapes, etc., growing luxuriantly.

Fisheries. Canada's lakes, rivers, and 12,000 miles of shore fisheries (5,000 miles on Atlantic, 7,000 on Pacific) yield almost inexhaustible supplies of fish. The lobster fisheries of Quebec and the Maritime Provinces are the largest in the world. Salmon, forming nearly one-fourth of total fishing catch, are taken chiefly in British Columbia. Cod, sardines, halibut, herring, haddock, mackerel, whitefish, trout, pike, pickerel, sturgeon, are other important catches.

Minerals. Minerals are found in all parts of Canada, but the chief mining districts are Nova Scotia, British Columbia, Quebec, northern and western Ontario, Alberta, and Yukon Territory. Coal and lignite fields, chiefly in Atlantic and Pacific regions, cover 100,000 square miles, with estimated reserves of 1,360 billion tons, two billion of which are anthracite. Gold, silver, nickel, asbestos, copper, iron, lead, zinc, petroleum, cement, and salt are the most valuable minerals found, but other important mineral products are gypsum, natural gas, cobalt, pyrites, clay products, stone and lime.

Manufactures. The manufactures of Canada have developed notably since the adoption of a protective policy in 1879. They are concentrated principally in the Provinces of Ontario and Quebec, and are dependent chiefly on the products of the fields and forests. The future of the pulp and paper industry is of vast importance, and large pulp and paper mills have been built, using the great supplies of spruce, balsam, etc. There are also a great many flour mills.

The leading industries are as follows: flour and grist-mill products, slaughtering and meat packing, pulp and paper, saw, lath and shingle mills, butter and cheese, electric light and power, automobiles, cotton yarn and cloth, refined sugar, refined petroleum, printing and publishing, bakery products, tobacco products, shoes, hosiery and knit goods, confectionery.

CANAL ZONE

The isthmian region under American control is known as the Canal Zone. It was acquired and organized as a basis for construction, operation, maintenance, and protection of the Panama Canal. This territorial belt extends five miles on each side of the center line of the canal route, and reaches seaward at each end to the international three-mile limit from mean low-water mark on shore. The area is 549 square miles; and the **population,** 39,467, including over 7,000 Americans. In the Zone are the islands of Perico, Naos, Culebra, and Flamenco in the Bay of Panama; but the cities of Panama and Colon are outside the Zone jurisdiction, though the United States has authority to enforce sanitary ordinances and maintain public order in these cities in case the Republic of Panama should not be able, in the judgment of the United States, to do so.

The United States acquired the Zone, February 26, 1904, by treaty with Panama, paying $10,000,000 immediately, and $250,000 annually since 1913. Under the provisions of this treaty, the United States may acquire by purchase, or by exercise of the right of eminent domain, any lands, buildings, water rights, or other properties necessary and convenient for the construction, maintenance, operation, sanitation, and protection of the Canal.

The Panama Canal. The length of the canal from deep water to deep water is 43.8 nautical miles, or 50.4 statute miles. A sea-level stretch of 5.77 nautical miles from the Atlantic entrance, leads to the Gatun Locks, rising by three steps to Gatun Lake, 85 feet elevation. This lake (area 106.4 square miles, with a reservoir capacity of 183 billion cubic feet, the largest artificial reservoir in the world) was formed by damming the Chagres River. A run of 20.55 miles on the lake, to Gamboa, brings us to the famous Gaillard Cut (formerly called Culebra Cut), 6.97 miles long, 300 feet wide at bottom, extending to Pedro Miguel Lock and Dam on the Pacific slope, where the vessel is lowered one step to Miraflores Lake, 55 feet elevation. Here, a run of about one mile, to the southern end of the lake, brings us to the Miraflores Locks, where, by two steps, the vessel is lowered again to sea-level, and wends its way through a seven-mile channel leading past Balboa into the Pacific Ocean.

The minimum bottom width of the canal channel (in Gaillard Cut) is 300 feet; maximum, 1,000 feet. The depth of the channel ranges from a minimum of 41 feet, to about 80 feet in parts of Gatun Lake. The clear interior width of the lock chambers is 110 feet; length, 1,000 feet. The Gatun Dam was built by filling the space between two natural ridges, with sand and clay; it is 1½ miles long, ½ mile wide at base, and 100 feet wide at its top, which has an elevation of 105 feet.

CEYLON

Area. The area of Ceylon is 25,332 square miles with a **population** of 5,422,000, the Sinhalese comprising about 62 per cent. Europeans, about 7,300. The **climate,** although tropical, is remarkably uniform, as heat is tempered by the surrounding sea and the monsoons. The hill country is healthful; mean annual temperature at Kandy (1,665 feet elevation), 76°. Rainfall averages 40 to 200 inches—heaviest on southwest hill slopes, and in May and October.

Government. Ceylon is a British Crown Colony under the administration of a Governor, an Executive Council, and a partly elective Legislative Council.

Agriculture employs two-thirds of the people. Coconuts, rice, tea, and rubber are the chief products, but cacao, coffee, tobacco, and cinnamon are also grown in large quantities. Cotton, various fruits, and vegetables are being introduced. There are numerous cattle, sheep, goats, and pigs.

Fisheries. Pearls are the most important sea products.

Minerals. Plumbago is the chief mineral, though the island also contains gold, monazite, thorium, and mica. There are many gem quarries, where catseyes, sapphires, rubies, etc., are found.

Manufactures comprise woven materials, basket work, tortoiseshell articles, jewelry, earthenware, and metal, lacquer, and carved work.

CHILE

Area and Population. The Republic of Chile has an area of 290,195 square miles. Its extreme length is over 2,600 miles, and its width from 100 to 248 miles. The population, chiefly in central districts, is 4,427,212, the majority of European origin.

Physical Features. The Andes Mountains, forming the eastern boundary, are the dominating natural feature. At the south, submerged outliers of the Andes form a remarkable fringe of coastal islands. In the north are saline pampas traversed by volcanic uplifts. Central Chile is diversified by well-watered plains and valleys, the lofty Sierras throwing off to the west a succession of spurs which in this region extend to the sea. Southern Chile is a region of large lakes, islands, glaciers, and immense tracts of dense forest.

Climate. At the north, a tropical, dry climate prevails, rainfall being very slight as far south as Valparaiso. From there south to Tierra del Fuego, the prevailing westerly winds bring much rain, December to March. In Central Chile, climate is temperate. The mean annual temperature ranges from 74° in extreme north, to 42° in the south, being 57°, with rainfall of 13 inches at Valparaiso.

Government. Executive power is vested in a President, elected for six years by direct vote of the people. The President is assisted by a Cabinet, and is not eligible for re-election. Legislative power rests with a popularly elected National Congress of two houses.

Agriculture. Northern Chile is arid, but the central districts produce large crops of wheat, barley, beans, oats, corn, peas, potatoes and other vegetables, fruits, and wine. Cattle, horses, sheep, goats, alpacas, and swine are reared in large numbers. Wool, hides, leather, and frozen meats are exported.

Forests. The forested area of Chile is estimated at over 9,000,000 acres. It begins in the central region south of 35° S. lat., and reaches down to Cape Horn.

Minerals. Minerals are the main source of wealth in Chile. They are found chiefly in the northern district, which has the largest nitrate deposits in the world. It is estimated that the Chilean nitrate deposits will supply the increasing nitrate demands for 100 years. There are also enormous deposits of borate, and guano is found along the coast. South of Valparaiso are extensive coal mines. Other minerals produced are copper, silver, gold, iron, cobalt, manganese, salt, and sulphur.

CHINA

Area and Population. The area of China proper is 1,534,420 square miles. Including Sinkiang, Manchuria, Mongolia, and Tibet the area is 4,279,170 square miles. China's population can only be estimated. The most reliable estimate sets that of China proper at 411,356,000, and at 446,165,600 with the dependencies included.

Climate. China is a country of extremes of temperature. The north experiences very cold winters and hot summers; the central zone is temperate, and the southernmost provinces lie within the tropics. Summer is the rainy season. The central zone receives much less rain than the north or south.

Government. The Chinese Republic was established in 1912. A President, elected for five years, assisted by a Cabinet, exercises administrative powers, while a parliament of two houses exercises the legislative powers. Local government is in the hands of the provinces, which enact laws pertaining to education, police affairs, provincial debts, public works, through single-chambered assemblies, elected by the citizens. Internal disorders have prevented government from functioning with complete success.

Agriculture supports the bulk of the population. Holdings are small, implements are primitive, and irrigation is widespread. Rice is the principal crop. Wheat, barley, millet, maize, peas, and beans are cultivated in the north, and sugar, indigo, rice, and tea in the south. Tobacco and cotton are widely raised, and fruit trees frow in great variety. China furnishes over one-quarter of the world's supply of raw silk. Oxen, sheep, and pigs are the principal farm animals, but the cost of land prevents extensive raising of live stock.

Minerals. China is one of the leading coal countries of the world. Iron has been worked since ancient times and copper is plentiful. Tin is the most important mineral export, and gold, silver, antimony, lead, tungsten, quicksilver, and bismuth are also found.

Manufactures. Most industries have not passed beyond the domestic stage but the growth of cotton and wool spinning and weaving has been rapid. Silk goods are manufactured in quantities. Flour and rice milling is important. There are several iron works, and many factories for glass, porcelain, and lacquered ware, in which the Chinese excel.

Dependencies. *Manchuria* has an area of 363,610 square miles, and a population of about 27,490,000. The original Manchu population has largely been replaced by Chinese immigrants. Northern Manchuria is devoted chiefly to cattle-grazing, but the south is very fertile, and much millet, soya beans, wheat, rice, and other crops are grown. Kwantung Peninsula and Port Arthur are leased to Japan.

Mongolia. This vast region has an area of about 1,367,600 square miles and a population estimated at 1,800,000, mostly nomadic Mongols and Kalmucks who range the desert with camels, horses, and sheep. Chinese immigration has increased considerably in late years. Inner Mongolia is divided into three administrative areas, each under a governor appointed by the Chinese government. Outer Mongolia is under the Mongolian National government, influenced by China and the Soviet Union.

Tibet is a bleak, mountainous country, and was long isolated. Its area is 463,200 square miles, and estimated population, 3,000,000. Chinese suzerainty is recognized, but English influence is dominant.

Sinkiang, or the *New Dominion*, has an estimated area of 550,340 square miles, and population of 2,519,600. It is regarded as a separate province, under a civil governor. Some agriculture is practiced; wool, cotton, silk, jade, and gold are produced.

COLOMBIA

Area and Population. The Republic of the United States of Colombia, which occupies the extreme northwest of the South American continent, has an area estimated at 440,846 square miles. The population is figured at 7,967,788.

Physical Features. The western part of Colombia is traversed north and south by three ranges of the Andes Mountains. The peak of highest elevation is Mount Tolima, which has an altitude of about 18,432 feet. East of the mountains, the surface of the country slopes gradually down to the valleys of the Orinoco (toward the northeast) and the Amazon (toward the southeast). The principal river of western Colombia is the Magdalena, which is navigable 900 miles from its mouth.

The Colombian coast-line has but few good natural harbors, the greatest indentation being the Gulf of Darien.

Climate. The country lies wholly within the Torrid Zone, and temperatures are generally high, except where moderated by high altitudes (as in the western portion), by the northeast trade winds, or by the cold ocean current off the west coast. The warmest regions are along the Caribbean Sea, in the Magdalena Valley, and on the eastern Andean slopes and the llanos. On the elevated plateaus the temperature is moderate, but the climate in the low, hot, swampy lands is very unhealthful.

The annual rainfall, on the whole, is heavy. Alternate wet and dry seasons prevail in most parts of the country, but in some regions, affected by the mountains, there are permanently dry areas while in others the rain is almost continuous. On the west coast, the precipitation is 73 inches, resulting in swamps and tangled forest jungles except in a few favored regions.

Government. Executive power is vested in a President popularly elected for a four-year term and not immediately eligible for re-election. Legislative power rests with a Congress of two houses—a Senate, whose members are indirectly elected for a four-year term, by a vote of electors specially chosen for that purpose, and a House of Representatives elected for a two-year term by direct popular vote.

Agriculture. Although much of the soil of Colombia is extremely fertile, only a small part is under cultivation. The lack of adequate transportation facilities has considerably retarded the agricultural development of the country.

Coffee is the great staple agricultural product, Colombia exporting a large amount annually, of which over two-thirds goes to the United States. Other important crops are bananas, tobacco, sugar, maize, cotton, and wheat.

The live-stock industry has attained considerable proportions, and cattle, horses, swine, and sheep are extensively raised.

Forests. Colombia has extensive forests yielding many valuable products. The rubber tree grows wild, and rubber is an important item of export. Cedar, dyewoods, and copaiba trees are abundant in the Magdalena valley. Cinchona (Peruvian bark), from which quinine is obtained, was first studied in Colombia, in 1793. Other important forest products are tolu balsam, balsam copaiba, ivory nuts (vegetable ivory), and cacao.

Fisheries. The inland waters are well stocked with fish much prized by the natives for food. Pearl fisheries off the coast are a government monopoly and an important source of revenue.

Minerals. Colombia is wonderfully rich in minerals which rank as the most important of her resources. For many years she has been one of the main sources of the world's supply of platinum. Gold is found in all departments of the Republic, and silver is abundant. Rich emerald mines, located chiefly at Muzo and Coscuez, are worked as a government monopoly. Salt mines north of Bogotá are also owned by the Government, and are a great revenue-producer. Coal and petroleum deposits are extensive. Other minerals produced are copper, lead, mercury (cinnabar), manganese, iron, limestone, and fire clay.

Manufactures. The manufacturing industries of Colombia are advancing. One of the characteristic industries is the making of "Panama Hats" which are woven from the straw, paja toquilla.

Large blast furnaces, iron and steel rolling-mills, and foundries and machine shops are located in the rich mineral district around Bogotá, making pig iron, wrought iron, rails, machinery, castings, etc. Other manufacturing establishments are glass factories, shoe factories, textile mills, breweries, flour mills, etc.

Bogotá, the capital, lies in the heart of a rich agricultural and mineral region, and is considered one of the most beautiful of the world's cities.

COSTA RICA

Area. The total area is 23,000 square miles.

Population. There are 492,542 inhabitants, including 18,000 British West Indian negroes on banana plantations. The infusion of Spanish blood is greater than in any other Spanish-American country. Many uncivilized Indians live in the north.

Government. The Republic is governed by a President (4-yr. term), his six Secretaries of State, and a Constitutional Congress (4-yr. term).

Agriculture. Coffee and bananas are the chief products. Rice, corn, barley, potatoes, and beans are cultivated in the interior, and cacao, vanilla, sugar cane, cotton, and indigo are raised on the warm coast-lands.

Stock-farming is an extensive industry, and many cattle, horses, pigs, sheep, mules, and goats are raised.

Forests. The forests are remarkable for hardwoods. Mahogany, rosewood, ebony, and precious dyewoods cover the highlands, especially to the northeast. Rubber is also found.

Minerals. Gold and silver mining is carried on extensively, especially on the Pacific slope. Iron and manganese are widely distributed.

CUBA

Area. The area of the island of Cuba is 41,634 square miles. Including the Isle of Pines (area 1,180 square miles) and the many hundreds of coral islets along the coasts, the total area of the Republic is 44,164 square miles.

Population is 3,607,919, about 75 per cent of which is white.

Physical Features. Coast lands, especially in south, are marshy. Elevated interior is divided into two parts by marshy depression across east-central section. Broken ranges traverse interior, with principal mountains in southeast. The highest elevation is that of Pico Turquino, 8,320 feet. Western part is diversified by low, forest-clad hills and gently sloping plains.

Climate. Although Cuba has a generally tropical and equable climate, the higher elevations of the interior experience wide range of temperature, the freezing point often being reached in winter. The high temperatures on the coast are made oppressive by the humidity, which is, however, not excessive for a tropical country.

Government. Cuba became a Republic on May 20, 1902, when the control of the island was formally transferred from the suzerainty of the United States to the newly-elected Cuban Government.

The constitution provides for a President and Vice-President (elected for four-year term), and a Congress of two houses. The President is assisted by a Cabinet of eleven Secretaries of the various departments of the administration. The Senate is composed of six members from each of the six provinces; and the House of Representatives is made up of one member for every 25,000 inhabitants.

Agriculture. Considerably over one-fourth of the world's supply of cane sugar is obtained from Cuba. The principal sugar-producing regions are in the Cienfuegos, Cardeñas, Habana, Matanzas, and Sagua la Grande districts.

Cuban tobacco is the choicest that is cultivated, and it is very largely exported in both raw and manufactured state. It is grown to best advantage in Pinar del Rio, on the southern slopes of the Sierra de los Organos; also in Habana, Santiago de las Vegas, and Bejucal. The normal crop is about 65,000,000 pounds.

Coffee is one of the leading crops of Cuba, and is best cultivated in the Province of Oriente. Cacao, cereal, and potatoes are other crops of importance. A large export trade in fruits is carried on, principally pineapples, citrus fruits, and bananas. The tamarind grows everywhere; mangoes, though exotic, are extremely common; and pomegranates are as generally used in Cuba as apples in the United States.

Cattle are raised everywhere throughout the island.

Forests. The forests of Cuba are not only extensive, but provide many valuable cabinet woods and general forest products. Mahogany, ebony, and lignum-vitae are exported; cedar is used in the manufacture of cigar boxes; and many other hardwoods are used on the railroads, for farm implements, etc. Dyewoods, fibers, gums, resins, and oils are also produced in abundance.

Fisheries. Food fishes are relatively not abundant, but the sponge fisheries provide a livelihood for many of the people, especially in Batabano and Caibarien.

Minerals. Mineral resources are fairly abundant, but not in sufficient quantity to be of very great industrial importance. Copper is worked in the Cobre mines near Santiago, iron in Daiguiri and Nipe, and manganese in La Maya and Cristo. All of the iron ore is shipped to the United States.

There are extensive and valuable deposits of beautiful marbles in the Isle of Pines, and lesser ones near Santiago. Limestone is the principal stone existing in Cuba, however. Clays of all qualities and colors abound.

Manufactures. The many sugar mills and the tobacco factories are the principal manufacturing industrial establishments of Cuba. In the tobacco industry, the manufacture of cigars is the principal form in which the leaf is manipulated.

Rum and whiskey are manufactured, and tanning, preserving of fruit, and a few old handicraft industries such as woodworking and the making of straw hats are also carried on.

CYPRUS

This British island in the Mediterranean, 40 miles from the coast of Asia Minor and 60 from the coast of Syria is administered through a Governor, an Executive Council consisting of the Colonial Secretary, the Attorney-General, the Treasurer, three local residents, and a partly elective Legislature.

Area, 3,584 square miles, with a **population** of 330,000, mostly adherents of the Greek Orthodox faith. There are valuable sponge fisheries off the coast. Gypsum, marble, and terra umbra are found in abundance; Cupriferous iron pyrites is mined on a large scale. Asbestos is also mined. Surface is rugged and mountainous; Climate healthful; soil fertile. The chief products are corn, vetches, cotton, flaxseed, olives, raisins and other fruits, silks, and wines.

CZECHOSLOVAKIA

Area and Population. The area is 54,192 square miles and the population is 14,523,000.

Physical Features. The northern and western border regions are mountainous. In the east, the Carpathian Mountains extend along the Polish frontier, with an offshoot—the Little Carpathians. The sloping surface south merges into the plain of Hungary. The western half of Czechoslovakia comprises two great lowland basins largely surrounded by mountain chains, culminating on the German frontiers in the Böhmer Wald, Erz Gebirge, and Riesen Gebirge—outliers of the Alpine system. The Danube River forms part of the boundary with Hungary.

Climate. The climate of Czechoslovakia is of great variety. On the Carpathian slopes, a continental climate prevails, with hot summers and very rigorous winters. In the western half, a mild climate in general prevails. Rainfall varies with proximity to the mountains. In the Carpathians, the average is 40 to 50 inches, but it declines to 16 to 24 inches on the plains.

Government. Under the Constitution, Czechoslovakia is a democratic Republic, Carpathian Ruthenia receiving autonomy. Legislative power is vested in parliament of two elective houses—a Senate and a Chamber of Deputies. The President is elected for 7 years by the two houses in joint congress.

Industries and Resources. Agriculture. In natural resources, as well as advanced industrial development, Czechoslovakia is one of the richest nations of Europe. Agriculture engages about one-third of the people. Cereals are the leading crops—oats, barley, rye, wheat, and corn. Others are sugar-beets and potatoes. Hops are grown for export and brewing. Fruits are also abundant—apples, pears, and stone fruit. Live stock are reared in large numbers—cattle, pigs, sheep, horses, and goats. In **forests,** the Republic is richly endowed as nearly one-third of the surface is covered with timber. The largest trees are, in Slovakia (maple, ash) and Bohemia (oak, walnut, cherry). **Minerals** are also abundant, comprising coal (hard and soft), iron, antimony, graphite, and garnets. Gold, silver, copper, and lead are found in the Carpathians, rock salt, in Slovakia and Ruthenia. Slovakia is rich in iron, coal, petroleum, etc. **Manufactures** include numerous textile mills (linen, cotton, woolen), glassworks and factories making imitation precious stones, food-product factories, many paper mills, and many large furniture plants, besides sugar refineries, breweries, distilleries, blast furnaces and other ore-reducers, factories making machinery, electrical equipment, metal goods, gloves and other leather goods, chemicals, etc.

DENMARK

Area and Population. The total area of Denmark comprises 16,604 square miles. The population is 3,518,000. The inhabitants are almost all Danish, only 3.27 per cent being listed as foreign-born.

Physical Features. The surface of Denmark is low and generally flat, consisting of undulating plains diversified by heaths, marshes, and lakes. The highest altitude is 560 feet.

Climate. Denmark experiences a rather mild climate, due to the fact that the greater part of the country is exposed to the tempering influence of the sea. The mean annual temperature for the whole country is about 45° Fahr., the mean for the winter being 32.8°; and that for the summer, 59°.

Rainfall varies considerably in different localities and different years. It is highest on the west coast, and ranges from about 16 inches to a maximum of 28 inches.

Government. Denmark's government is that of a limited monarchy based on a constitution. The executive authority is vested in a King, assisted by a responsible ministry of eleven members. The parliament (*Rigsdag*) consists of two houses, *Landsting* (Senate) and *Folketing* (House of Representatives).

Agriculture. Eighty per cent of the total area of Denmark is productive. Most of the land is freehold. The small-holding law prohibits the union of small farms into large estates, encouraging the parceling-out of landed property.

The greatest acreage is devoted to oats. Mixed grains are given the second greatest acreage, and barley the third. Large and increasing areas are given to beet-root. Other important crops are wheat and potatoes.

Stock-raising for export dairy purposes is of great importance in Denmark. Cattle, swine, and horses are most numerous of the live stock. Butter, for which Denmark is noted, is most important of the dairy products. Butter, eggs, and bacon comprise about seven-eighths of the total exports, which are principally to England, butter alone comprising about 40 per cent.

Forests. The forests consist mainly of beech trees and are under strict government control.

Fisheries. The fisheries in coast waters provide an extensive food supply to the population of Denmark. Inland waters are also well stocked.

Minerals found in Denmark are insignificant when compared with those found in other European countries. Clays are abundant, however, and in Bornholm are quarries of marble and freestone.

Manufactures. Among the most important are iron works, manufacturing machinery, engines, and ships. Other large industries are the distilleries and breweries, sugar refineries (the latter increasing in number), woolen and cotton mills, paper mills, glove factories, tobacco factories, brick and pottery plants. A notable industry is the manufacture of porcelain. Dairying is the great national industry. Large quantities of margarine and oleomargarine are also manufactured.

DOMINICAN REPUBLIC

The Dominican Republic, embracing the eastern portion of the island of Haiti, has an area of 19,332 square miles, with a population of 1,022,485, the majority creoles and mulattoes. Legislative power is vested in a National Congress of two houses. The President is chosen for a term of six years, assisted by a Cabinet Council. The cultivation of sugar is a flourishing industry, and mahogany, logwood, cotton, tobacco, cacao, coconuts, coffee, honey, and copper are exported.

DUTCH GUIANA (SURINAM)

Area and Population. The area is 54,291 square miles. The colony has a population of 148,960, exclusive of uncivilized negroes and Indians in the forests.

Government. The administrative and executive authority of the colony is in the hands of a Governor, who is assisted by a Council and by an elected house of representatives, the "Colonial States."

Agriculture. Sugar cane, cacao, and coffee are cultivated on the larger plantations; and rice, bananas, and corn on the small farms and coast lands.

Forest Products. The forests are rich, but transportation of the products is very difficult.

Minerals. Gold output, mostly alluvial, is of the greatest importance.

Manufactures. Sugar, rum, and molasses are the chief products.

ECUADOR

Area and Population. Ecuador has an area of about 118,596 square miles. The territorial claims of Peru extend northward over the southeastern portion of the Republic. The Galapagos Islands, about 550 miles off the coast, were occupied in 1832; area 2,868 square miles, population 400. The population of Ecuador is estimated at 2,000,000, mainly Indians. People of mixed races number about 400,000.

Physical Features. The western part is traversed north and south by the Andes Mountains, the main range containing some of the loftiest peaks, including Chimborazo (20,702 feet).

Climate. The highlands of Western Ecuador enjoy a climate healthful and of moderate temperature, even along the equator. The hot, rainy season is from December to May. Rainfall is almost constant on the eastern slopes of Andes. The mean annual temperature at Quito is 55.6°; at Esmeraldas, on coast, 82°.

Government. Executive power is vested in a President elected for four years; legislative, in a Congress of two houses elected by adults who can read and write.

Agriculture. The most important agricultural crop of Ecuador is cacao. The output of coffee is also very large together with ivory nuts, used chiefly for manufacture of buttons, and rubber. Sugar, tobacco, bananas, rice, and some cotton are also cultivated. On the uplands, cereals and vegetables of temperate zone are grown. Live stock are extensively raised, and hides exported.

Forests. Equatorial forests affording timber, dyewoods, gums, resins, extracts, and rubber, cover 90,000 square miles, chiefly in east and north. One of the characteristic woods is quipe, very buoyant, used as a substitute for cork. Another unique product is kapok, a strong fiber obtained from the silk cotton tree, and from which valuable waterproof fabrics are made.

Minerals. The Republic has rich resources in gold, mercury, copper, iron, lead, and coal, and there are large deposits of sulphur. Silver and petroleum also exist, and some emeralds are found.

Manufactures. The leading manufactured product of Ecuador is the "Panama" hat, the output of which cannot adequately meet the demand. The hats are woven under carefully regulated conditions of moisture, from the straw called "paja toquilla." Commerce is chiefly with the United States.

Guayaquil is the chief seaport, and center of trade and manufacture. Quito, capital of the Republic, and ancient capital of the Incas, is noted for its position practically on the equator, but at an elevation of 9,350 feet, which gives it a temperate climate.

EGYPT

Area and Population. The total area of Egypt is 383,000 square miles. This comprises the Libyan Desert, the region between the Nile and the Red Sea, the Nile Valley and Delta, and the Sinai Peninsula. The population is 14,213,364.

The cultivated and settled portion, confined to the Nile Delta and Valley, totals about 12,226 square miles.

Climate. The mean annual temperature immediately along the coast is about 69°, with a mean January temperature of 57°, and a mean July temperature of 81°. Toward the south the range between the mean summer and winter temperatures increases considerably, as at Assuan, where 42° is the mean in January, and 118° in July. The daily range is great because of the rapid radiation of heat at night. In the mountains, the temperature falls with the rise in altitude, falling as low as 18° in January at an elevation of 2,000 feet.

Egypt is almost rainless, except in a narrow belt along the Mediterranean where eight inches fall annually. At Cairo the amount decreases to about an inch and a half.

Government. By the terms of the draft constitution promulgated in 1923, Egypt is governed by a hereditary King, his Ministers, and a Parliament of two houses. The Ministers are jointly and individually responsible to the Chamber. Cairo is the capital, and the largest city in Africa.

Agriculture. The fertile regions of Egypt are limited to the Nile Valley, where the soil is of extraordinary richness. Three crops are raised annually, in the winter, the summer, and the autumn seasons. The chief summer crops are rice, cotton, and sugar. The leading winter crops are cereals (wheat, barley, maize, etc.). Corn, millet, rice, and vegetables (onions, etc.), are the principal products of the autumn season. From the line of cliffs bounding the Nile Valley, stretch the vast deserts, devoid of vegetation except in widely scattered oases.

South of Darut, where irrigation is accomplished by periodic submersions at the time of the Nile flood, the crops are chiefly cereals and vegetables. Extensive irrigation works are converting large areas in Upper Egypt to the same conditions that exist in the Delta region. North of Darut in Upper Egypt, the same crops are grown as in the Delta, with the exception of rice. The fruits commonly produced in Egypt are dates, oranges, lemons, figs, grapes, apricots, peaches, and olives.

Of the live stock, sheep are the most numerous. The other domestic animals are camels, horses, donkeys, mules, and oxen. Travel over the vast areas of waterless sands would be impossible without the camel.

Forests. Egypt is practically without forest area, though scattered clumps of date palms abound, and rubber and gum arabic are important forest products of the Sudan.

Minerals. Gold has been mined in the region along the Red Sea at intervals since ancient times, and precious stones are found in the Sinai Peninsula and in the Red Sea Hills. Large quantities of salt are obtained from Lake Mareotis, carbonate of soda from the Natron Lakes, and alum from the oases. Petroleum is produced near the Gulf of Suez.

The granite and porphyry quarries of Egypt are famous, and have been productive for ages. Other minerals are phosphate rock, manganese ore, gypsum, and talc.

Manufactures. The largest agricultural product, cotton, supports the most important manufacturing plants—the textile mills, cottonseed oil factories, and ginning establishments. In Upper Egypt a large number of sugar refineries are located, and in the Delta a number of rice mills. Flour mills in all parts of the country prepare the grains for home consumption.

Other important industries are breweries and distilleries, soap factories, and cigarette factories. The latter are located mostly in Alexandria and Cairo, and export large quantities of their products. The tanning of leather is also an industry of importance, and there are extensive pottery works in Upper Egypt.

The Suez Canal. This international waterway connecting the Mediterranean and Red seas is a vital link in the trade route between Occident and Orient, obviating the necessity of the long voyage around the Cape of Good Hope. It is a neutral waterway, open on equal terms to vessels of all nations at all times, and is exempt from blockade. It was built 1859–69, at a cost of about $127,000,000, by an Egyptian company financed chiefly in France by Count Ferdinand de Lesseps; but the British acquired control of stock by purchase in 1875. The Company's concession will expire in 1968. Length of canal, 103 miles, including 4 miles of approaches; depth, 35 feet; bottom width, 108 feet.

ERITREA

Eritrea, an Italian colony, has an area of 45,783 square miles. Inhabitants number 402,793. The natives are to a great extent nomadic Mohammedans. There are about 4,000 Italians.

The colony is administered by a civil Governor, who is nominated by the King and is under the Italian Minister for the Colonies.

The climate is generally tropical, and the rainfall very light.

Products are largely pastoral. Camels, oxen, sheep, and goats are raised. Pearl fishing is carried on, from which the revenue is large. Large quantities of palm nuts are exported, and gold is mined. Massáua, a fortified seaport on the Red Sea coast, is an important trade center.

ESTONIA

Estonia is located on the eastern shore of the Baltic Sea, south of the Gulf of Finland, and has an area of 18,354 square miles which supports a population of

1,116,553. The executive power consists of the State Elder and his ministers, who form the Government.

Agriculture is the chief occupation of the inhabitants, the principal products being flax, grain, and livestock. The most important manufacturing industries produce paper, cement, oil, lumber, textiles, matches, and leather.

ETHIOPIA

Area and Population. Ethiopia, or Abyssinia, has a total area of 350,000 square miles with 10,000,000 inhabitants. The population is of a decidedly mixed character, consisting of Semitic Abyssinians, Somalis, Arabs, Negroes, Indians, etc.

Climate. In the lowlands below 4,000 feet, conditions are tropical and unhealthful, the annual temperature ranging from 70° to 100°. It is considerably cooler on the uplands, the mean falling to 60° to 80°. Still higher, it falls as low as 45°. Rainfall, 30 to 40 inches, heaviest in midsummer, provides much of the water for the annual overflow of the Nile in Egypt.

Government. Ethiopia comprises the kingdoms of Tigré, Amhara, and Shoa, with territories and dependencies. It is a feudal monarchy, independent since 1896.

Agriculture. Stock-raising and agriculture are the principal pursuits. There are large herds of cattle, sheep, and goats. Horses, mules, and donkeys are also raised. Very little land is cultivated, the idea of landed property scarcely being known, and all land belonging theoretically to the Negus. Coffee, the principal product, grows wild, but is also cultivated. The natives raise barley, millet, wheat, and tobacco. Cotton, sugar-cane, hops, dates, and the vine are minor products. Agriculture is most extensive in the north.

Forests yield rubber and valuable timber. Timber growth is heaviest in the tropical lowlands, in gorges and ravines.

Mineral resources consist of iron, gold, silver, copper, antimony, salt, sulphur, and coal. Iron and gold are most worked.

Manufactures are in a crude state, comprising lumber, flour, soap, and leather. The United States imports skins and coffee from, and exports cotton sheetings to, Ethiopia.

FIJI ISLANDS

Area and Population. Colony numbers about 250 volcanic islands (80 inhabited), well wooded, 1,100 miles north of New Zealand. Total area, 7,083 square miles (Viti Levu, 4,053; Vanua Levu, 2,130). The population is 176,800, of which Fijians and East Indians are most numerous.

Climate. Temperatures in Fiji are moderated by the cool sea breezes, resulting in an equable though warm climate. The wet season, from October to May, is often accompanied by severe hurricanes.

Government. The colony of Fiji, ceded by the native chiefs to Great Britain in 1874, is administered by a Governor (appointed by the Crown), an Executive Council, and a Legislative Council.

Agriculture. The cultivation of sugar-cane, coconuts, and bananas is the main agricultural industry. Maize, yams, tobacco, tea, rice, rubber, sisal, are also raised. Sugar, copra, green fruits, shell, and rubber are the principal exports. Cattle run wild in large numbers; sheep, horses, and Angora goats are also plentiful.

FINLAND

Area is 149,954 square miles; **population,** 3,611,791, of whom one-eighth are Swedes.

Physical Features. Finland presents a series of low hills and parallel valleys descending to the Gulf of Bothnia, the surface being highly glaciated. Toward the south, it is dotted with innumerable lakes which have been developed into a fine system of connected inland waterways.

The **climate** is healthful, but rigorous, with wide range of temperature. Rainfall is adequate for vegetation, being heaviest in the south and decreasing toward the east.

The **government** chief executive is the President, elected for 6 years by universal suffrage, and assisted by a Cabinet. The legislative branch is a House of Representatives.

Iron is the chief **mineral.**

Agriculture and lumbering are the main occupations. The principal crops are rye, barley, oats, hay, potatoes, flax, and hemp. Live stock are reared in considerable numbers.

Forests of pine and spruce are the chief natural wealth, covering over half the total area.

FRANCE

Area and Population. The area of France totals 212,681 square miles, or a little more than the combined area of Illinois, Ohio, Michigan, and Wisconsin. The population is 41,019,683 of which the foreign population is small. The Corsicans are of Italian stock, and several hundred thousand Italians live in southeastern France, especially about Nice. In the Department Nord, are about the same number of Belgians.

Climate. The climate is of considerable evenness, influenced by the sea on the west, and protected by the mountains on the east. East and central France, at higher altitudes, have a wider range of temperature than the west and north. Rainfall is unequally distributed, and is least along the Mediterranean.

France has many famous summer and winter resorts. The Southern coast east of Marseille is protected from the northern winds by the highlands, and this region has become a great winter resort known as the Riviera.

Government. France is a republic with a representative government. The chief executive is the President, assisted by the Ministry. Legislative power is vested in the Senate and the Chamber of Deputies.

Agriculture. A greater proportion of land is capable of cultivation than in any of the other large countries of Europe. The largest grain acreage is devoted to wheat, the leading districts in its production being the basins of the Seine, Loire, and Garonne rivers. Among the cereals, oats are given the next largest acreage, and are most important in the Seine basin. Rye, barley, and mixed grains are other important crops.

Vineyards occupy about 4,000,000 acres, and great quantities of wine are produced. The great wine regions are the departments Hérault, Aude, Gironde, Côte-d'Or, Charente, Gers, the Rhône and Saône valleys, and the districts known under the old names of Champagne, Anjou, and Touraine. France is the greatest grape-raising and wine-producing country in the world.

Potatoes and sugar beets are also grown extensively. Other agricultural products are maize, buckwheat, tobacco, colza, and hemp.

Fruits and nuts yield crops of great value. Cider apples, plums, olives, walnuts, and chestnuts are the leading products.

Silk culture is carried on extensively in the warm areas of the lower Rhône, and is progressing with government aid.

Stock-raising receives much attention, especially among the hills in the northwest, where fine pasture lands abound. Great quantities of butter and cheese are produced.

Fisheries. The fisheries are among the most important of the resources. The chief products are herring, mackerel, sardines, anchovies, tunny fish, lobsters, and oysters. The sardine fisheries are most valuable.

Forests. About 16 per cent of the country is under forest.

Minerals. Of the minerals, coal is the most important, and is mined in the departments of Nord, Pas-de-Calais, Rhône, and Loire. Until 1933 the former German coal mines in the Saar basin are to be administered for the exclusive benefit of France. Iron is mined in Meurthe-et-Moselle, and zinc in Gard and Aveyron. Other important minerals are lead and silver, copper, antimony, arsenic, gold, manganese, and salt. Quarries produce large quantities of building stone, slate, and cement.

Manufactures. Foundry work and tool-making are carried on in the Seine, Nord, Loire, Meurthe-et-Moselle, and Ardennes departments. St. Étienne, Marseille, and Bordeaux are great steel cities. Large quantities of iron ore are imported from Spain to the southern smelters.

Wool textiles are manufactured in Department Nord and the Champagne region, chiefly in the cities Roubaix, Tourcoing, Reims, and Sedan. Cotton textiles are produced in Normandy, Nord, and Vosges. Silk textiles are important in Rhône, Isére, and Loire.

Other important manufactures are sugar, alcohol, leather, wood work, pottery, scientific instruments, flour, and bakery products.

Colonies. In the extent and importance of her colonies and dependencies France is second only to Great Britain.

FRENCH EQUATORIAL AFRICA

French Equatorial Africa, with an area of 982,049 square miles and a population of 3,127,700, includes, in the south, a large area of the Congo River Basin, and in the north, part of the Sahara. The climate in the tropical forest area and the river valleys is very unhealthful, being humid and hot. In the north, desert conditions prevail. Agriculture occupies the greater portion of the population, the chief products being rubber, palm-oil, coffee, bananas, peanuts, tobacco, cacao, and vanilla. The forests contain many valuable timber trees and a great deal of private capital is being invested in the development of this resource. A Governor-general and a Council administrate the laws for France.

FRENCH GUIANA (CAYENNE)

Area and Population. The area totals about 34,740 square miles. The population is 47,341, exclusive of those in the penal settlement.

Government. French Guiana is administered by a Governor, assisted by a Privy Council, a Council-General and Municipal Councils, and is represented by one deputy in the French Parliament.

Agriculture. Rice, corn, manioc, cacao, coffee, sugar cane, tobacco, yams, bananas, bread fruit, indigo, and gutta-percha are raised in small quantities. Some hides are exported.

Forests. Vegetation is very luxuriant. Hardwoods, gutta-percha, rubber, vanilla, and many spices are abundant.

Minerals. The most important industry is placer gold-mining. Silver, iron, and phosphates are also worked.

Manufactures are represented by sugar mills, sawmills, distilleries, and brick works. The capital, Cayenne, is the only seaport.

FRENCH INDO-CHINA

Area and Population. Total area, 284,816 square miles, with a population of 20,697,000, chiefly Mongols and Malays.

Physical Features. French Indo-China comprises *Tongking* (largely a delta region), *Annam* (mountainous and heavily wooded), *Cambodia* and *Cochin-China* (mainly alluvial plains); also *Laos* and *Battambang* territories, and the leased district of *Kwangchowwan* bay and islands in the Chinese Province of Kwangtung. **Climate** governed by monsoons; wet and dry seasons. **Government** by Governor-General, through Governor (in Cochin-China) and Residents-Superior. **Agriculture:** Rice (70 per cent of exports) the great crop; also sugar, tea, cotton, tobacco, spices, maize, coffee, manioc, fruits. **Forests** contain rare hardwoods, bamboo, rubber, coconuts, dyewoods, and medicinal plants. **Minerals** include coal, gold, lead, antimony, tin, tungsten, zinc. **Manufactures,** chiefly preparation of rice, hides, sugar, etc., for market.

FRENCH SOMALILAND

French Somaliland, on Gulf of Aden, south of Eritrea, is a French protectorate. Area, 5,790 square miles; population, 85,778. The chief products are coffee, hides, skins, ivory, and salt. Coast fisheries are very valuable, chiefly in pearl products. Much of Ethiopia's external trade goes by way of the port of Djibouti, the capital.

FRENCH WEST AFRICA

French West Africa includes Senegal, French Guinea, Ivory Coast, Dahomey, French Sudan, Upper Volta, Mauritania, and Niger Territory, a total of 1,443,332 square miles, with a population of 14,318,550. The area includes, in the north, a large portion of the Sahara Desert. The climate in the desert regions is exceedingly hot with a very small percentage of humidity, while on the coast the heavy rains combined with the heat makes it very unhealthful and disagreeable to Europeans. In the southwest, toward the coast of the Gulf of Guinea and the Atlantic Ocean, are extensive forests that contain a great many very valuable products such as mahogany, palm-oil, rubber, cacao, and lumber which, when included with the valuable mineral deposits which have been discovered, makes this one of France's most valuable colonies from the standpoint of raw materials. Agriculture is carried on by the natives under very primitive conditions, except on the plantations operated by the government and Europeans. Corn, cotton, cacao, coffee, fruit, peanuts, and coconuts are the chief products. Cattle-raising is increasing.

GERMANY

Area. The area is 181,662 square miles, with a population of 64,400,000.

Physical Features. In general terms, northern Germany may be described as largely a lowland plain. South of this is a central highland region, including the Harz Mountains and other chains; while the remainder of the Republic, to the south, is a great plateau diversified by mountains, hills, and tablelands. It is only in the Bavarian Alps that the snow-line is reached.

With the exception of parts of Bavaria and Württemberg drained by the Danube into the Black Sea, practically all Germany is drained into the North and Baltic seas. The great river of western Germany is the Rhine (length 810 miles), which rises in Switzerland. Its principal tributaries are the Neckar, Main, and Moselle. Germany has a few small lakes in southern Bavaria, and a great many in the Baltic coastal plain.

Climate. Germany as a whole is remarkable for the uniformity of its climate. The west has a mild climate like that of the British Isles. In the upland districts, winters are often severe, but the lower river valleys are delightful throughout the seasons. In the sheltered valleys the Rhine and Main, subtropical fruits mature. The cold increases, however, toward the east. Rainfall averages 27 inches annually, being heaviest on the mountains. On the Harz Mountains it reaches 66 inches.

Government. Germany is a Federal Republic comprising 18 individual Republics. Each state in the federation must have a republican constitution. Powers of state are vested in the Reichsrat, or State Council. The President of the Republic is elected by the people for 7 years, and appoints a Cabinet of Ministers responsible to the Reichstag.

Agriculture. Fully nine-tenths of all the land is productive. Most holdings are small, but in the northeast, larger estates prevail. The leading crops in order of acreage are hay, rye, oats, potatoes, wheat, barley, and sugar-beets. Other important crops are vegetables, flax, hemp, hops, tobacco, fruits, and nuts. The vine-clad, terraced slopes of the valleys of the Rhine, Moselle, Neckar, and Main have long been celebrated for their wines. Stock-raising is prominent. Superior horses are reared on the Bavarian plateau and in the north. Saxony and Silesia are renowned for their wool. Great herds of Holstein and Friesian cattle are reared on the meadows reclaimed from the marshlands of the northwest coastal regions. Other stock comprises pigs, goats, poultry, and dogs.

Forests occupy about 50,000 square miles, being heaviest on the mountain slopes. About two-thirds are pine, larch, and fir, the remainder, foliage trees (oak, birch, ash, beech, etc.). The Scotch pine and white birch are characteristic trees in the northern plain.

Minerals. In mineral wealth, Germany is very rich, coal and iron being the chief products. There are silver-lead mines in Saxony, and zinc in Silesia, Westphalia, and Rhenish Prussia; the Harz Mountains are rich in gold, silver, lead, and copper. There are enormous rock salt deposits in Hannover and Saxony. Germany is also a great producer of potash salts.

The iron industry is centered in Prussia, Bavaria, and Saxony; steel, in Rhenish Prussia. Saxony leads in textiles, but linen is produced also in Westphalia and Silesia; cotton goods in Bavaria, Baden, and Württemberg; woolens in Prussia, Saxony, and Bavaria; silks in Rhenish Prussia and Baden. Glass, porcelain, and pottery are made in Silesia, Thuringia, Bavaria, and Saxony; clocks and wooden-ware in Württemberg and Bavaria. Enormous quantities of beet sugar are refined in Prussia, Brunswick, Anhalt, Bavaria, etc. Alcoholic liquors are distilled chiefly in the potato-raising districts of the northeast, and beer is brewed in every part of the country.

GREAT BRITAIN

Area and Population. The area of Great Britain (England, Wales, Scotland, Northern Ireland, Isle of Man, and Channel Islands) is 94,278 square miles, or a little less than that of Wyoming. The population is 47,382,894. About 75 per cent of the total number of inhabitants is included in England, 10½ per cent in Scotland, 9½ per cent in Ireland, and 4½ per cent in Wales.

Climate. The climate is largely influenced by the insular character of the land. The surrounding waters cause an equable temperature, the annual range varying only about seventeen degrees over the greater part of the country. Western coasts are rainy, and the eastern dry, the average yearly precipitation varying from 100 inches in the island of Skye, to 25 inches in London.

Government. Great Britain is under an Imperial Government consisting of the Sovereign and Parliament. Parliament comprises the King, House of Lords, and House of Commons. The Peers of the House of Lords hold their seats (1) by hereditary right, (2) by creation of the Sovereign, (3) by virtue of office—Law Lords and English Bishops, (4) by election for life—Irish Peers, and (5) by election for duration of Parliament. The House of Commons is elected by ballot, and consists of members who represent County, Borough, and University constituencies.

An Irish Home Rule Bill to establish separate parliaments resulted, Dec. 6, 1921, in a treaty, creating Ireland a Free State (which Ulster may join if she desires) constitutionally similar to Canada and other Dominions of the British Empire.

The executive government of Great Britain is vested nominally in the Crown, but virtually in a committee of Ministers, the Cabinet. The First Lord of the Treasury is usually Prime Minister.

Agriculture. About 58½ per cent of the total area of Great Britain is arable or pasture land. Oats, wheat, and barley are the great grain crops, and are grown to best advantage in England and Scotland. Potatoes are the important crop in Ireland. Large quantities of flax are also raised in Ireland. Sheep are the most numerous of the live stock, and are raised particularly in England and Wales.

Forests. Forest land in Great Britain totals over 2,500,000 acres.

Fisheries. Herring, haddock, cod, and plaice are caught in large numbers. Crabs and oysters are abundant on the east coast of England, and lobsters on the south coast.

Minerals. Coal is the chief mineral product of England and Wales. The fields on the eastern slope of the Pennines in England are the most important. Iron ore ranks next among the minerals and is richest in the Cleveland district which produces two-fifths of the ore mined in the Isles. There are copper, tin, zinc, and lead mines, and slate quarries are numerous in Wales, while radium has been found at Bath.

Manufactures. The metal-working industry is located in and near the iron ore and coal districts in England, and is the chief industry in Great Britain after the textile manufactures, the products of which form about half the total export of the Isles. China and pottery are manufactured in many localities, but the chief centers are Derby and Staffordshire. Shipbuilding is another great industry, particularly in the northeast. Cutlery, arms, motor vehicles, saddlery and leather goods, chemicals, paper, jewelry, clocks, watches, liquors, and many other products are also produced.

Colonies. The colonial dominions of Great Britain are the most extensive of any outlying possessions in the world. The dependencies are scattered over all the continents.

GREECE

Area and Population. The area is 54,092 square miles with a population of 6,315,000.

Physical Features. Coast deeply indented, generally rugged and barren. Interior is extremely mountainous (Mt. Olympus, 9,800 feet). Many narrow valleys and small fertile plains, but no navigable rivers. Canal across Isthmus of Corinth, opened November 9, 1893, about 4 miles long, is rarely used by foreign vessels. **Climate** ranges from temperate, with severe winters, in northern highlands, to subtropical in south. Mean annual temperature 64°. Rainfall deficient: greatest in west; annual average at Athēnai (Athens), 16 inches.

Government. The Constitution which was published in September, 1926, provides for the establishment of a legislative body consisting of an Upper and Lower House. The President, or chief executive, shall be elected by both Houses for a term of five years.

Agriculture is the chief occupation, but only one-fifth of total area is cultivated. About three-fourths is mountains, and one-third is waste land. Farming is backward, owing to dry climate and primitive methods. Cereals grown are wheat, barley, corn, and oats. Currants are the most favored and best cultivated crop. Olives are abundant. Grapes are largely grown, and much wine produced. Rice is cultivated in Macedonia, near Thessalonike (Salonika). Tobacco, cotton, figs, oranges, lemons are other important crops. Irrigation and drainage projects are making progress. Silk culture is carried on in Messenia and Thessaly. Live stock comprises sheep, cattle, asses, horses, mules, and pigs. Cheese is produced in considerable quantity.

Forests cover about one-eighth of the country. Oak, beech, and pine still flourish on the upper mountain slopes, but fire and cutting have made great ravages.

Minerals are found in great variety. Those worked include iron, copper, lignite, zinc, lead, silver, manganese, aluminum, antimony, tin, nickel, cobalt, sulphur, and chromite, ocher and other earths. High-grade magnesite is abundant.

Manufactures are advancing, leather, soap, and cotton goods making up the leading factory output. Other products are dried and preserved fruits, olive oil, wine, cheese, lumber, and metal work.

GREENLAND

Greenland is a colonial possession of Denmark and consists of a large island off northeastern North America, lying almost wholly within the Arctic Circle. It is largely buried under an ice-sheet, source of the Atlantic icebergs. Only the south and west coasts up to about 73° N. lat. are habitable. The total area is about 839,781 square miles; ice-free area 46,740 square miles. Population, 14,804. The principal exports are seal and whale oil, cod liver oil, seal, fox, and reindeer skins, eiderdown, and walrus ivory.

GUATEMALA

Area. Guatemala has an area estimated at 42,353 square miles.

Population. The population is 2,454,000, almost three-fifths pure Indians and most of the remainder half-caste.

Government. The legislative power of the Republic is vested in an elected National Assembly and a partly elected Council of State. The President is elected for a term of six years.

Agriculture is the chief occupation of the people. Coffee is by far the most important crop, and makes up three-fourths of the total value of exports of the country. Bananas form the second important product, and sugar the third. Chicle is gathered for export, and rice, corn, wheat, and beans are raised for home consumption. Germans control about a third of the coffee plantations. On the tablelands of the interior, many thousands of acres are devoted to the raising of cattle, sheep, and pigs.

Forests. Mahogany, cedar, rubber, dyewoods, and chicle are produced in abundance, especially in the Peten District, on the Atlantic slope.

Minerals. Gold, silver, copper, iron, and lead are existent, but very little worked.

HAITI

The Republic of Haiti, embracing the western portion of the island of Haiti, has an area of 10,204 square miles, with a population of 2,550,000, most of whom are negroes. Legislative power is vested in a National Assembly of two houses. Agriculture is the chief occupation, with coffee, cacao, cotton, sugar, tobacco, fruits, and honey as leading products. The most valuable export is coffee. The considerable mineral resources are undeveloped. Cigars, cigarettes, sugar, and rum are the chief manufactures. By treaty, 1915, Haiti became a virtual protectorate of the United States.

HAWAII

Area and Population. The Territory of Hawaii has a total land area of 6,406 square miles, or a little more than Connecticut and Rhode Island combined. Population, 1930, 368,336.

Physical Features. The islands are crests of a submarine mountain chain extending northwest to southeast, partly reef-surrounded. Surface much broken. Most prominent features are volcanos on island of Hawaii—Mauna Kea (quiescent), 13,825 feet elevation; Mauna Loa (intermittently active), 13,675 feet; and Kilauea, 4,090 feet. Kilauea, in constant eruption, has a crater 9 miles in circumference, 1,000 feet deep, and is the world's largest active volcano.

Climate. Lying in mid-ocean just within the tropics, the climate is warm throughout the year, though high temperatures are prohibited by the northeast trade winds, which blow for about nine months of the year. The mean annual temperature is 71.5°. The extremes are 54° and 89°. Daily range at Honolulu averages 11°. In the higher altitudes in some portions of the islands, the air is bracing and very healthful.

Rainfall is greatest on the windward (east) side of the islands, especially on the mountain slopes up to a certain elevation. At Olaa on the island of Hawaii (about 2,000 feet), the rainfall is about 175 inches; while at Kailua, on the sheltered side, it is only about 51 inches annually. Precipitation is heaviest during the winter season.

Government. On August 12, 1898, the Hawaiian Islands were annexed to the United States, and on June 14, 1900, were constituted the Territory of Hawaii. The Territory is represented in the United States Congress by a delegate elected for two years by popular vote. Executive power is vested in a Governor and a Secretary, appointed for four-year terms by the President. There is a Legislature composed of a Senate, members of which are elected for four-year terms and a House of Representatives, elected for two-year terms. Honolulu, the capital, is on Oahu.

Agriculture. Large areas of highly fertile farm lands are found on the most important islands (Hawaii, Maui, and Oahu), and especially in the lowlands. The islands are mountainous and extremely volcanic, the soil being formed by the weathering of basaltic lavas, and by sedimentary deposits washed down from the mountains, of a considerable depth and exceedingly fertile. Climatic conditions also favor agriculture.

Sugar cane is by far the most important product, although great quantities of rice are also raised. Other leading products are coffee, corn, peanuts, hay, tobacco, sisal, potatoes, sweet potatoes, and other vegetables, cassava, algaroba beans. Large quantities of pineapples are raised. Other fruit crops are bananas, oranges, figs, grapes, mangoes, berries, and taro (from root of which the staple native food "poi" is prepared). Fruit-canning is a growing industry. Except on Hawaii, irrigation is extensively employed on the sugar, taro, pineapple, banana, and other fruit plantations. Rice, of course, is irrigated everywhere.

Of the live stock, cattle, sheep, and swine are most numerous. The industry, ranking in importance next to sugar-growing, is carried on chiefly on the higher slopes, where crops cannot be so readily grown. The export of wool and hides is considerable.

Forests. There were 840,984 acres in forest reserves in 1925. The upper mountain slopes, especially the eastern, are densely forested, the trees yielding valuable ship timbers and ornamental woods.

Fisheries. Inland waters provide very little fish, the streams being small and rapid. Sea fish, however, are of great variety. Artificial ponds, formed on the beach, are stocked from the open sea, and provide free fishing grounds.

Minerals are unimportant in comparison with the agricultural resources. There are, however, unlimited quantities of building rock, and large supplies of pumice, sulphur, gypsum, and ocher. Salt, kaolin, and salammoniac also occur.

Manufactures. Manufacturing is for the most part incidental to agricultural pursuits, as sugar-refining, rice cleaning and polishing, pineapple canning, meat-packing, etc. Other establishments are the coffee mills and sisal and manioc mills. Iron works in Honolulu manufacture machinery, and there are lumber mills, soap factories, etc.

HONDURAS

Area. The area of Honduras is about 44,275 square miles.

Population. Inhabitants number 700,811, most of them Indians and half-castes.

Government. The government of the Republic is vested in a President popularly elected for four years, a Council of Ministers, and an elected Congress of Deputies.

Agriculture. Bananas, coconuts, and coffee are the chief products of Honduras. Tobacco, rubber, sisal, castor beans, vanilla, corn, wheat, rice, sugar, and beans are also raised.

There are large numbers of cattle, pigs, and sheep.

Forests. Mahogany and other cabinet woods, logwood, brazil-wood, ivory nuts, and sarsaparilla are exported. Pine grows in the highlands.

Minerals. The mineral resources of Honduras are great but inadequately developed. Gold, silver, platinum, copper, lead, zinc, iron, antimony, and coal are found widely scattered.

Manufactures. "Panama" straw hats and cigars are the only manufactured articles produced for export.

HONGKONG

The Crown Colony of Hongkong, a British commercial center, naval base, and free port, has an area of 391 square miles; population, including the mainland strip leased from China in 1898, 1,075,700, mostly Chinese. Administration is in the hands of a Governor, Executive Council, and Legislative Council. The chief industries are sugar refining, shipbuilding, rope making, tin refining, cement making, manufacture of tobacco, making knit goods, and deep-sea fishing.

HUNGARY

Area and Population. Total area is 35,875 square miles, prewar, 125,430 square miles. Prewar population, 20,886,487, now 8,525,725.

Physical Features. The larger part of Hungary occupies a great plain, sloping downward from the Austrian Highlands in the west to the valleys of the Danube River and its tributary the Tisza, which drain the heart of the country. The plain rises again toward the north and northeast, where it culminates in the Carpathian Mountains on the borders of Czechoslovakia, and elevation also increases gradually in the east, where Hungary is separated from Romania by mountainous spurs of the Transylvanian Alps or Eastern Carpathians. The plain is penetrated in places by outliers of these surrounding mountain systems.

Climate. The winters are very cold on the great plains, especially in the vicinity of the Carpathians, while the summers are warmer than those of western Europe within same parallels of latitude. Rainfall increases gradually toward the west, and is greatest during summer months. It averages 40 to 50 inches annually in the Carpathians, and 15 to 24 inches on the plains.

Government. For a brief period following the abdication in November, 1918, of King Charles (successor to the late Emperor Francis Joseph), Hungary was an independent republic. In March, 1919, it passed briefly under Soviet control. Revolutionists, however, with Romanian assistance, restored a national parliamentary government under a Regent or Protector, and in March, 1920, Hungary was again declared a monarchy (constitutional).

Agriculture. About two-thirds of the people depend on products of the soil. Their activities comprise farming, mostly dairy work, market-gardening, fruit-growing, silkworm culture, lumbering, charcoal-burning, etc. The Hungarian plain has long been known as one of the granaries of Europe. The leading crops are corn, wheat, barley, rye, oats, and potatoes; also produces tobacco, sugar beets, hops, silk cocoons, wine, honey. Live stock includes cattle, pigs, sheep, goats, horses, mules, and asses. **Forests** are beech, oak, and pine, covering about 1,357,438 acres. The chief **mineral** products are iron and coal. Gold, silver, lead, copper, mercury, antimony, sulphur, and salt are also worked. **Manufacturing** establishments include lumber mills, iron blast furnaces, steel mills, flour mills, breweries, etc.

ICELAND

Iceland is the second largest island forming a part of the European continent. It is about 400 miles from the nearest point in Scotland, and 500 miles from the nearest in Norway.

The island, which has an area of 39,709 square miles and a population of 103,317, was granted independence by Denmark, 1918, with permanent neutrality. The present King of Denmark is acknowledged as the sovereign. The climate of the southern portion is temperate, though wet and stormy. The harbors rarely freeze to the exclusion of shipping. The interior tableland is largely a barren, grassless desert, covered with volcanic and glacial detritus. Numerous grassy lowlands, affording fair pasturage, cut into the tablelands.

The principal products are hay, cattle, ponies, goats, and sheep, though it is with difficulty that forage is raised. Iceland's main importance lies in its fisheries, which are of considerable richness.

INDIA

Area and Population. The total area of India, including regions embraced in the Indian states and agencies, is 1,802,629 square miles. The total population is 318,942,480, of whom about 22 per cent live in the Feudatory States.

Physical Features. Central and southern India consists of a great undulating plain with an average elevation of about 3,000 feet. On the north this plain terminates in the Himalaya Mountains, the highest range in the world and which includes Mt. Everest, 29,002 feet, and many other mountains over 25,000 feet. The principal rivers are the Ganges and Indus, both having their source in the Himalayas.

Climate. The range of temperature is rather wide. In the plains the heat is very great throughout the year; on the coasts the temperature is high, but equable. On the plateaus the heat is tempered by the altitude. The monsoons (periodical winds) exercise a very marked effect upon the country, bringing on the wet season in summer, and the dry season during the late fall and winter.

Government. The supreme executive authority is vested in the Viceroy (or Governor-General)-in-Council. The legislature, comprising the Council of State and Legislative Assembly, both partly elective, has a limited authority. The Feudatory States are governed by their own princes, ministers, or councils, and, except for restrictions safeguarding authority of the Supreme Government, are autonomous.

Agriculture has always been the chief industry of India. Rice is cultivated to a far greater extent than any other crop. Wheat forms the chief export to Great Britain. Millet and pulse comprise the principal food crops. Large crops of cotton, linseed, rape, and mustard, sesamé, groundnut, and sugarcane are produced. Jute, indigo, tea, and tobacco are also grown. Stock-raising is important and hides and skins are exported.

Forests. The forests of British India cccupy 249,504 square miles.

Minerals. The leading minerals are coal, petroleum, gold, manganese ore, salt, saltpeter, tin, and jadestone.

Manufactures. Cotton and jute weaving are the largest manufacturing industries. Wool, silk, shawls, carpets, wood-carving, metal-working, sugar, lumber, paper, are also of importance.

Dependencies. The *Andaman Islands* comprise an area of 2,508 square miles; population, 17,814. The forests are valuable; tea, coconuts, manila hemp, aloe, and cattle are raised.

The *Nicobar Islands* have an area of 635 square miles; population, about 9,272, a variety of the Malay race. The people have pursued the coconut trade for over 1,500 years.

The *Laccadive Islands* have a population of 13,633, almost entirely Mohammedans. The staple product is coir fiber. Area 744 square miles.

IRAQ (MESOPOTAMIA)

Area and Population. Iraq has an area of 143,250 square miles with a population of 2,849,282.

Physical Features. Iraq embraces the fertile valleys of the Euphrates and Tigris Rivers, and its position is of great strategic importance as it controls the eastern terminus of the Baghdad Railway at the head of the Persian Gulf.

Government. When its independence was proclaimed, shortly after the World War, Iraq was placed under Mandate of Great Britain by the League of Nations. The Mandatory terms were defined by a treaty between England and Iraq in 1922 and accepted by the League in 1924. The administrative power rests with the King and his Cabinet who are guided by the British High Commissioner's advice. The legislative body consists of a nominated Senate and an elected Lower House.

Resources and Industries. The country consists of vast plains, fertile and well watered in most sections, but in others requiring irrigation by means of canals and pumps. The summers are hot and the winters are very agreeable. Cotton cultivation is greatly encouraged by the government. Other crops are barley, wheat, and dates. A considerable amount of wool is exported annually. The rich petroleum and asphalt deposits, for which Iraq (Mesopotamia) is famous, are also being worked.

IRISH FREE STATE

Area and Population. The total area of Irish Free State is 26,592 square miles, with a population of 2,972,000.

Physical Features. The surface is generally level in the interior, rising toward the coast in isolated groups of hills. The country is well watered, and contains numerous lakes and rivers. Coast is broken by many inlets which afford excellent harbors, especially on the south.

Climate. The climate of Irish Free State is greatly influenced by the Gulf Stream, the temperature of the southwestern part being as high as central Italy. Rainfall is heavy, in some portions nearly 100 inches.

Government. Irish Free State was given the status of self-governing Dominion in 1926, having been given its "free status" four years earlier. The government consists of a governor-general, an executive council, and a legislative body made up of two chambers, the Seanad and the Dail.

Agriculture. Irish Free State has a fertile and easily cultivated soil, though arable land forms not over 25 per cent of the total land surface. The excessive moisture in wet seasons damages the cereal crops, especially in the and west, but good drainage is aiding production.

The hay and forage crops cover as much area as the grain and green crops combined. Potatoes are raised in great quantities. Oats, barley, and wheat are the leading cereals in the order named. Beans, peas, turnips, and mangels rank next to potatoes. Considerable flax is grown, the plant flourishing in a sea climate of moderate temperature. Cattle and sheep are the principal live stock.

Forests. About half the timber products are used in mining operations. About 300,000 acres are woodland.

Fisheries. Over 20,000 men and boys are engaged directly in the fishing trade. Salmon, oysters, pollan, and mussels are the important catches.

Minerals. The mineral output of Ireland is unimportant. Coal fields are found in all provinces, but production is small

Manufactures. Cotton goods are produced in large quantities. Irish poplin, a mixture of silk and wool, was once a popular article of manufacture, and is still celebrated, but the output at the present time is small. Balbriggan, on the east coast, north of Baile Atha Claith (Dublin), is widely renowned for its hosiery.

Whisky has been distilled for several centuries. The largest whisky distilleries in the British Isles are in Baile Atha Claith. This city is also celebrated for its porter, or "stout," which is brewed in the largest establishment of its kind in the world.

ITALIAN SOMALILAND

This protectorate, the most easterly portion of Africa, including Jubaland (relinquished by British), has an area of 190,000 square miles; population, 1,028,875. It is administered by a Civil Governor. Resources are principally live-stock products. Large numbers of camels and sheep are raised. Butter, timber, hides, cotton, gum, and dura are exported.

ITALY

Area and Population. The total area is about 119,703 square miles and the population is 41,175,000. In race the Italian nation is remarkably homogeneous.

Physical Features. The peninsula is traversed lengthwise by the Apennines which culminate at Monte Corno, 9,580 feet. The Alps form the north and west boundary. On each side of the Apennines the land slopes gradually toward the sea, broken occasionally by isolated hills. The region near the mouth of the Po River is low and swampy.

Climate. The climate of Italy makes it one of the most popular winter resorts in the world. Though in a warm latitude, large districts are tempered by the mountainous conformation. Some parts experience mild winters like those of England. Approaching the sea from the high altitudes inland, the naturally high temperatures and luxuriant vegetation of the latitude prevail. The southern extremity is very hot, and in some districts malarial.

Government. Italy is a constitutional monarchy, governed by the King and a Parliament comprising a Senate and Chamber of Deputies. The Senate is composed of the princes of the royal blood over 21 years of age, and an unlimited number of members over 40 years of age who are nominated by the King for life. The Chamber of Deputies consists of members over 30 years of age, elected for five-year terms. Executive power, under the King, rests in a ministry of 15 departments.

Agriculture. Ninety-one per cent of the land area of Italy is under crops, and is held principally under one of three systems: peasant proprietorship, partnership, or rent.

Grapes occupy the greatest acreage. The twelve million acres devoted to the vine equal a fifth of the entire cultivated area. The wine output varies, but averages between 500 and 1,000 million gallons a year. Over 11,000,000 acres are given over to wheat each year. The grain is grown in all parts of the country, but the greatest production is in the Po Valley. Olives are produced on over 1,000,000 acres, principally in the south. Over three and a half million acres are devoted to corn, principally in the north, in the Po Valley. Six million acres are given over to beans and another million to oats. Potatoes, barley, rice, rye, and sugar beets are extensively grown.

Sheep and cattle are numerous, especially in the north along the Po Valley.

Silk culture is carried on in all parts of the country, most intensively in Lombardy, Piedmont, and Venezia.

Forests. Forests cover in large part the middle and higher slopes of the Alps and Apennines, consisting of hardwoods, chiefly oak, beech, chestnut, poplar; softwoods, silver fir, spruce, pine, larch.

Minerals. About three-fourths of the world's sulphur comes from Italy (chiefly Sicily). Other minerals are: building and sculptural stone—granite (Piedmont); marble (Carrara, Massa, etc., from Tuscany); lignite, pyrites, lead, zinc, iron, copper, manganese.

Manufactures. Italy is almost without coal, but has, especially on the Alpine slopes, splendid water-power. The north has therefore become the great manufacturing region of the country. Machinery, silk, cotton, and chemicals are leading products. Other important products of industry are: lace, leather, furniture, art goods, rubber, fruits, wine, automobiles, straw hats.

Colonies. Of Italy's colonies Eritrea, Italian Somaliland, Tripolitania and Cirenaica are most important. Area, 801,485 square miles.

JAMAICA

The British Crown Colony of Jamaica has an area of 4,450 square miles (including the 224 square miles of the Turks, Caicos, and Cayman islands, and Morant Cays and Pedro Cays); population, 974,742, largely blacks. The Governor is assisted by a Privy Council and a partially elected Legislative Council. Women were enfranchised in 1919. The climate is enjoyable with little humidity. Bananas, raw sugar, coffee, coconuts, oranges, cacao, ginger, and pimento are the chief agricultural products. Many cattle are raised. Logwood extract, rum, jippi-jappa ("Panama") hats, and banana food products are important exports. Large quantities of salt are produced on Turks and Caicos islands. Fishing of turtle and sponges is also carried on.

JAPAN

Area and Population. The total area of the Empire of Japan, including Chosen, Taiwan, Karafuto, the Pescadores, and the former German Oceanic islands north of the equator allotted to Japan as mandatory of the League of Nations, is 261,832 square miles. Population of the Empire is 86,732,804.

Climate. The climate in Japan proper is warmer than in other countries lying in the same latitude. This is caused by the warm currents of the Pacific. The yearly averages of temperature range from 44° in the island of Hokkaido (Yezo) to 71° in Taiwan. The annual rainfall for the whole country averages about 62 inches.

Government. Executive power is exercised by the Emperor with the advice and assistance of a Cabinet of Ministers appointed by himself. Legislative power is exercised by the Emperor with the consent of the Imperial Diet. The Diet is composed of two houses, the House of Peers and the House of Representatives.

Hokkaido, Chosen, Taiwan, and Karafuto are administered under Governors, with special organizations.

Agriculture. The cultivated lands of Japan comprise about fourteen per cent of the total land area. The great crop of the country, to which the greatest acreage is devoted, is rice, the average annual crop amounting to about 500,000,000 bushels. Most of the product is consumed within the country, rice being the chief food crop of the natives, and it is falling considerably short of being sufficient to supply the demand. Large quantities are now being imported. Other cereals raised in Japan are barley, rye, and wheat. Tobacco is raised extensively. Japan is also one of the world's great tea-growers. Sugar has become a great crop. Vegetables, fruits, and nuts are raised in large quantities. Raw silk is produced in large and increasing amounts and is the greatest article of export from Japan.

Stock-raising is being encouraged, owing to the increased demand for beef as a food, and for draft horses. Some goats are raised for milking, and a small number of swine for food. Only a very few sheep are kept.

Forests. The forests of Japan cover over 20 million acres, nearly half of which are State-owned. The lac tree is largely cultivated in northern Honshu, and camphor trees produce a great amount of camphor annually.

Fisheries. The waters surrounding Japan are plentifully stocked with fish. Enormous quantities are consumed annually for food, as well as exported to other countries, principally to China. Fish are used extensively as fertilizers.

Minerals. Of the metals found, copper is the most valuable and Japan has become an important source of coal supply. Other important minerals, in the order of their value, are: gold, silver, iron, iron pyrites, sulphur, and lead. Kaolin, used in Japan's celebrated porcelain, is also found. Large deposits of both anthracite and bituminous coal are found, and extensive mines were acquired in Manchuria after the Russo-Japanese War.

Manufactures. The manufacturing industries of Japan have developed with remarkable rapidity in recent years. European methods are being followed.

The establishments turning out products to the greatest value are the textile mills, and large quantities of hemp weaves are also turned out in addition to silk, woolen, and cotton goods. Other important manufactures are paper, matches, earthenware, lacquered ware, matting, leather, and oils. Enormous quantities of pig, bar, plate, and pipe iron are imported, and steel rails, plates, and other products are turned out in large quantities.

Drugs, cigarettes, a liquor called saké, and other minor products are manufactured for export trade.

Shipbuilding is extensively carried on, with the newest machinery and under the supervision of skilled European workmen.

Colonies. Japan's most important colonial possessions are Chosen (Korea) and Taiwan (Formosa). The former has an area of 85,206 square miles, with a population of 19,189,699. It is almost entirely an agricultural country, rice, barley, wheat, soy beans, tobacco, and cotton being the principal crops. Considerable minerals have been found but their development has been impeded by lack of means of communication.

Taiwan, a large island just north of the Philippines, with an area of 13,836 square miles and a population of 4,337,000, is also agriculturally important. In addition, utilization of its forest products occupies a large percentage of the inhabitants. The leading products are rice, raw sugar, grain, camphor, oil, soap, lumber, pith-paper, and meat.

LABRADOR

As the result of a decision handed down by the Privy Council at London during the early part of 1927, Newfoundland was granted territorial rights to the region known as Labrador. The extent of this acquisition was an **area** of about 112,400 square miles. The **population** is estimated to be 4,100, of which about 1,200 are Eskimos.

The **surface** of the large peninsula, of which Labrador forms a part, is rugged. Coast indented by deep inlets, with many good harbors, and thickly fringed with outlying islands. Interior is a tableland of about 2,000 feet general elevation, sloping gradually down to west, diversified by low hills (remnants of a former vast mountain system worn down by glacial action), and containing innumerable drainage basins discharging in all directions. Atlantic shore is precipitous, skirted by hills culminating near extreme north in unglaciated peaks 8,000 feet or more in elevation. **Forests** cover the southern watershed and river valleys. The land as a whole is **agriculturally** irredeemable. **Mineral** wealth abounds, but is undeveloped. **Climate** is rigorous; country icebound October to May.

Fishing and hunting are the principal industries, the fishing fleet, mainly from Newfoundland, employing some 15,000 people each summer. Cod is the great catch, but herring, salmon, and trout are also important. Fur animals include the marten, fox, mink, deer, wolf, and bear. The hair seal is hunted in March and April, being valued for its skin and oil.

LATVIA

Latvia is situated on the southern Baltic Littoral, and its area of 25,395 square miles supports a population of 1,896,500, chiefly Letts. The executive power of the Government is vested in a President, elected by a parliament (Saeima).

Latvia is mainly an agricultural country, although manufacturing industries are being extensively developed. The principal crops are rye, barley, oats, potatoes, and flax. Cattle-raising is also important, and large quantities of butter are exported. There is practically no mineral wealth. Latvian timber lands produce large amounts of pulp-wood and saw-timber annually.

LEEWARD ISLANDS

The British Colony of the Leeward Islands has an area of 715 square miles, with a population of 124,518. The group, administered by a Federal Executive Council and a Federal Legislative Council, is divided into five Presidencies, each with its local government: Antigua (with Barbuda and Redonda), St. Kitts-Nevis (with Anguilla), Dominica, Montserrat, and the British Virgin Islands (with Sombrero). Sugar cane, cotton, tobacco, fruits, cacao, and onions are the chief agricultural products; and sugar, molasses, rum, lime-juice, and citrate of lime are the manufactures. Some cattle are raised.

LIBERIA

Liberia, an independent republic with an elected President, House of Representatives, and Senate, was settled under an American colonization society in 1822. Its area is 43,000 square miles; population 2,250,000. The coastline is generally low and sandy, but the interior hills are diversified, with well watered fertile valleys. The climate is unhealthful, very warm and humid, but some relief is obtained from the almost constant sea breezes. The inhabitants devote most of their efforts to agriculture, the principal products being coffee, rubber, palm-oil, cacao, raffia-fiber, and spices. The forests contain many valuable trees, but little has been done along the lines of utilization.

LIECHTENSTEIN

This small principality, lying between Austria and Switzerland, consists of an area of 65 square miles with a population of 11,500, mostly of German origin. Agriculture is the chief industry. The principal products are corn, wine, fruit, wood, marble, and pottery. Stock-raising is highly developed.

LITHUANIA

Lithuania is a republic situated on the Baltic Sea, bordering east Prussia. It has an area of 21,683 square miles, with a population of 2,340,000. The executive power is in the hands of a President and his cabinet of ministers. The legislative power is vested in an elected diet.

Lithuania is an agricultural country, nearly 75 per cent being arable land. Cattle, hog, and poultry raising are about equally important. The principal agricultural crops are rye, wheat, barley, oats, potatoes, and flax. The principal manufactures include lumber, fertilizers, food-stuffs, linseed-oil, and leather.

LUXEMBOURG

Area and Population. Luxembourg has an area of 998 square miles. The population is 289,694.

Government. Luxembourg is a Grand Duchy and is governed by the Sovereign, and a Chamber of Deputies elected by universal suffrage.

Agriculture. The majority of the people are engaged in agriculture, raising grain, fruits, and vines.

Minerals and Manufactures. The region is rich in iron ore. Other minerals are copper, lead, and antimony. The chief manufactures are iron and steel, beer, distilled liquors, paper, leather, gloves, and textiles.

MADAGASCAR

Madagascar, a large island off the east coast of Africa belonging to France, has an area of 228,707 square miles, which supports a population of 3,694,007, mostly negroes. The island is picturesque and mountainous, with the most broken portion toward the east. The climate of the highland region is moderately cool and tolerable for Europeans, but on the low coastlands it is hot, humid and unhealthful. The coastal regions and many parts of the north are covered with rich tropical forest from which rubber, gums, dyewoods, and tanning-woods are obtained. Mineral resources, although not greatly developed, include gold, silver, copper, iron, lead, zinc, antimony, nickel, graphite, and coal. Agriculture and cattle-breeding are the chief industries, the most important products being rice, sugar, coffee, cotton, cacao, vanilla, tobacco, beans, and hides. Manufactures include the weaving of silk, cotton, and raffia-palm fiber.

MALAYSIA

Malaysia, the **Malay** or **Eastern Archipelago,** comprises the outlying islands of southeastern Asia which preserve a comparative continuity of physical formation and of racial, floral, and faunal characteristics with that continent. It includes six large islands—Borneo, Sumatra, Java, Celebes, Luzon, and Mindanao—and a host of minor islands. Excluding New Guinea (in Oceania), but including the Philippines, the total area is about 750,000 square miles; population, estimated at about 60,000,000, the majority Malays, a supposed mixture of Mongolian and Caucasian stock. Politically, with exception of the Philippines (U. S.), the islands of Penang, Singapore, Labuan, northern part of Borneo (British), and the eastern part of Timor (Portuguese), with neighboring isle of Pulo Cambing, the entire archipelago is a colonial dependency of the Netherlands.

The islands of Malaysia are mainly crests of partially submerged mountain ranges rising from the Asiatic shelf. They owe their present form largely to volcanic activity, and their proverbial fertility is due chiefly to the decomposition of volcanic rock into soil. The great zone of volcanic activity stretches in the form of a horseshoe from Sumatra through Java to Timor, then bending northward through the Moluccas and the eastern tip of Celebes, and extending throughout the Philippines. The highest peaks are Kinabalu in Borneo (13,680 ft.), Indrapura (Korintji) in Sumatra (12,030 ft.), and Semeru in Java (12,000 ft.). The interior of the larger islands is covered with dense forests abounding in hardwoods (teak, ebony, etc.) of great commercial value, besides numerous aromatic plants and shrubs. Coconut and other palms, bamboo, and tropical fruits abound.

DUTCH EAST INDIES. The total **area** of the Dutch East Indies is about 733,642 square miles; **population** about 51,881,862, including about 209,934 Europeans and 955,283 Orientals.

Administrative and executive authority of **government,** with certain legislative powers not conflicting with reservations of the home parliament, are vested in a Governor-General, assisted by a Council partly legislative and partly advisory. The Council has no executive authority.

Java is the most fertile and densely populated island. Most of the land is owned by the Government, and the bulk of the population are engaged in farming. Rice, sago, Indian corn, and fruits are the staple food of the people, and coffee, sugar, tobacco, rubber, indigo, tea, cinchona, nutmegs, capsicum, cotton, and coconuts are also extensively cultivated. Java is one of the world's great coffee countries, contributing most of the 100 million pounds average annual output of the colony. Kapok is extensively grown in central and eastern Java.

Sumatra has also large crops of coffee, tea, sugar, and rubber, and the high quality of its leaf tobacco, a favorite for cigar binders, is recognized the world over. Dutch Borneo produces considerable rubber. Fruits include bananas, melons, pomegranates, tamarinds, breadfruit, oranges, etc. Live stock consist of water buffaloes, cattle, horses, sheep, goats, and swine. **Manufactures** are chiefly domestic. Native women weave cotton and make mats, baskets, and earthenware. Among **minerals** tin is extensively mined in Banka, Billiton, and Riau; coal in Java, Sumatra, and Borneo; gold, copper, and iron in Borneo, Sumatra, and Celebes; petroleum in Sumatra, Borneo, Java, and Ceram; diamonds and antimony in Borneo; salt (a government monopoly) in Java.

BRITISH EAST INDIES. Under this broad name are sometimes included the British Indian Empire, Ceylon, the Straits Settlements, and the Federated and Non-Federated Malay States on the Malay Peninsula, as well as the British island colonies in Malaysia. These last-named are all on the island of Borneo.

British North Borneo occupies the extreme northeast of the island of Borneo. Area, 31,106 sq. m.; population, about 257,804, principally Mohammedan settlers on coast, aborigines in interior, with some Chinese traders and artisans, and about 550 Europeans. Tobacco, coffee, coconut, rubber, and ramie plantations have been established. Sago, rice, Indian corn, sugar cane, cotton, tobacco, ground and betel nuts, tapioca, and sweet potatoes are grown by natives. Other exports are timber, rattan, gutta-percha, camphor, sago, spices, birds' nests, and pearls. Minerals found include gold and coal in paying quantities. The region is under the jurisdiction of the British North Borneo Company, administered by a Governor in Borneo and a Court of Directors in London.

Brunei, a coastal strip southwest of and adjoining British North Borneo, with an area of about 2,500 square miles; population, 35,000. Its products are similar to those of North Borneo. Government nominally headed by a Sultan, but administered by a British Resident. Capital, Brunei, built on piles and hence sometimes called the "Venice of the East."

Sarawak, a coastal strip southwest of and adjoining Brunei. Area, about 42,000 sq. m.; coast-line, 400 miles; population, about 600,000. Has extensive level tracts along the seaboard, traversed by many navigable streams. Sago is exported in large quantities; coconuts are also abundant. India rubber, jelutong, cutch, and other forest products, besides birds' nests, are largely exported. The southern section is rich in minerals, antimony and quicksilver being exported. Coal is abundant; also gold, silver, diamonds, and petroleum found. The government is administered by a Rajah.

MALAY STATES

The Federated Malay States of *Perak* (area, 7,800 square miles), *Selangor* (3,156 square miles), *Negri Sembilan* (2,550 square miles), and *Pahang* (14,000 square miles) have a population of about 1,476,000, principally Chinese and Malays in about equal numbers. About one-sixth of the people are natives of India. Coconuts, rice, coffee, and rubber are the chief agricultural products. The forests produce excellent timber, as well as gutta-percha, oils, and resins. These states are the world's chief source of supply of tin. Gold, tungsten, coal, lead, iron, copper, bismuth, and mercury are also found.

The Unfederated Malay States (area about 23,486 square miles; population 1,232,155) comprise *Johore, Kelantan, Trengganu, Kedah,* and *Perlis.* The chief products are rubber, gambier, rice, copra, pepper, and tapioca, but tea and coffee, betel and areca nuts, and live stock are also raised. Mineral products are tin, tungsten, gold, galena, and pyrites. The manufactures are silk cloth, boats, and brick. Fishing is important.

In all the Malay states, the ruling Sultan is assisted by a Council and a British Resident Adviser, under a High Commissioner who is also Governor of the Straits Settlements.

MEXICO

Area. The area of Mexico is 767,198 square miles.

Population, 16,404,025. About 19 per cent of the people are pure or nearly pure whites, 38 per cent Indians, and 43 per cent of mixed races.

Climate. Although the country is about equally divided geographically between the temperate and the torrid zones, the great elevation of the land surface causes three distinct zones of climate: the hot zone, or *tierras calientes,* between sea-level and an elevation of about 3,000 feet; the temperate zone, *tierra templada,* between 3,000 and 6,000 feet; and the cold zone, or *tierras frias,* above 6,000 feet. In consequence, a very wide range of temperature, as much as 90 degrees, is found. The great plateau is the most favored region of the country, the temperature of the lands in the latitude of Mexico City ranging between 65° and 75° the year around. Below the parallel of 28° N., lies the zone of wet and dry seasons.

Government. Mexico, by its constitution of 1917, is a Federative Republic, governed by a President elected by direct popular vote for 4 years, assisted by a Council and a Congress of two Houses.

The Republic is composed of the Federal District, 28 States, and 2 Territories, each of which has its own constitution, governor, legislature, and judicial officers.

Agriculture. Because of primitive methods and unfavorable climatic and surface features, agriculture is undeveloped in many parts. The northwest is largely arid, and, even with irrigation, water supply is none too abundant. Many parts of the great plateau are also either too arid for agriculture or are broken by mountain masses. In the *tierras calientes* however, vegetation is luxuriant. The eastern coast is swampy and unhealthy, and rains are frequent.

The crops which are grown for home consumption are corn, wheat, barley, and beans. Sugar, tobacco, indigo, cacao, rice, and sweet potatoes are grown in the *tierras calientes.* Fruits are plentiful, both wild and cultivated, the most important being the banana, guava, plantain, orange, lemon, melon, and pineapple.

Sisal, or henequen, the fiber of the agave plant, is of great commercial importance in Mexico. It is produced chiefly on the light, shallow soil overlying the rock formations of Yucatan. Another product of this plant is the sap, which is manufactured into intoxicating liquors called "pulque" and "mescal."

Cotton has become an important crop under irrigation. It is now extensively produced in the northwest, where the Imperial Valley of southeastern California, irrigated from the lower Colorado River, extends south of the international boundary.

Chicle is the dried sap of the sapote tree, which grows in the hot belt, or *tierras calientes.* This product is exported in great quantities for the manufacture of chewing gum.

Guayule, a native bush, produces a cheap grade of rubber and its production is being rapidly developed.

Coffee, cultivated in the *tierra templada,* especially in the southern and southeastern states, is an important export.

Live stock is raised by the inhabitants of the semi-arid regions where ranching is carried on in the north and central sections much as it is in the southwestern United States.

Mineral Resources. The greater part of the wealth of Mexico is the rich supply of minerals, twenty-four of the thirty-one states and territories being active producers of minerals. Mexico has long led the world in the production of silver, and ranks high in the outout of gold. As a producer of petroleum she is among the leading nations.

Copper is mined in Baja California, Guanajuato, Guerrero, Jalisco, Michoacán, Sonora, and Tamaulipas. Lead is found in Hidalgo and Querétaro, and in many of the silver-producing districts. Coal is of a low grade, produced only in Coahuila. Iron, mercury, sulphur, antimony, bismuth, tin, platinum, tungsten, molybdenum, manganese, arsenic, opals, tourmaline, turquoise, asphalt, graphite, salt, and marble are also found.

Forests. The forest lands of Mexico cover almost 69,000 square miles, and the variety and magnificance of the timber of the *tierras calientes* can scarcely be described.

Fisheries. The pearl fisheries on the eastern coast of Baja California have been worked since the arrival of the Spaniards. Sponges and the tortoise-shell turtles are also found.

Manufactures. Foreign capital has been attracted by Mexico's vast resources, but disorders have checked development. Sugar refineries are largely American-owned, and electrical enterprises largely American-controlled. Textile mills have over 700,000 spindles, and there are many tobacco factories. There are oil refineries at Tampico, Puerto de Lobos, Tuxpan, Veracruz, and Minatitlan. Other industries are iron and steel, rubber, leather, flour, meat-packing, etc.

MONACO

Area and Population. The total area is 8 square miles. Situated in the most favored portion of the Riviera, it is visited by many tourists annually. Inhabitants number 24,927.

Government. This small principality is governed by a Prince and a National Council elected by universal suffrage. Revenue is derived mainly from the gambling tables of Monte Carlo. Monaco has its own coinage and postage stamps.

Industries and Resources. Olive oil, oranges, citrons, and perfumes are produced and exported.

MOROCCO

Area and Population. The total area is about 231,500 square miles, including the Spanish sphere of 18,300 square miles. Population of Spanish Morocco is about 600,000. French inhabitants number about 4,229,146, besides 66,223 troops. The population consists chiefly of Berbers, Tuaregs, and Arabs, and a considerable number of Jews and Negroes.

Climate. The climatic conditions are similar to those of Algeria. Along the Mediterranean coast, the influence of the sea makes the temperature equable, and the rainfall sufficient for production, but droughts are not uncommon in the southwest.

Government. Morocco, with the exception of the Spanish zone, is under the protection of France. The ruler is the Sultan, nominally an absolute despot, but administering the government with the advice of the French Resident-General in all matters. The Sultan is also the absolute head of the religion.

Morocco has four capitals, in each of which the Sultan has palaces: Fés, Marrakech or Morocco, Meknes, and Rabat.

The Spanish zone is under the control of a Spanish High Commissioner, and a Calipha who is chosen by the Sultan from two candidates named by the Spanish Government. Tangier and its district have been set apart as an international zone; the area is about 140 square miles.

Agriculture. Though the soil is capable of agricultural production, cultivation is in a primitive state. Vineyards and fruit and olive trees are very productive. The cultivation of cotton has been introduced.

Vast areas in the interior are unexploited, and their resources practically unknown. Among the principal agricultural exports are wheat, barley, beans, gums, linseed, olive oil, cumin, canary seed, cinnamon, and almonds. Wool, live stock, and eggs are also important exports.

Fisheries. Fish abound in Moroccan waters as in Tunisian, more especially sardines and tunny.

Mineral resources have not been developed, because of the hostility of interior tribes. The country is said to be rich, however, in copper, iron, lead, antimony, sulphur, silver, gold, petroleum, and phosphates. Iron and lead ores are exported from the Spanish zone.

Manufactures are few and unimportant. Natives produce carpets, slippers, and pottery, though the industries are declining.

NEPAL

The independent Kingdom of Nepal is governed nominally by the Maharaja, but is actually a military oligarchy under the Prime Minister. The country comprises an area of 54,000 square miles; population, about 5,600,000, chiefly Gurkhas. Hinduism and Buddhism dominate. Rice chief product and food. Other products: ginger, sugar, tobacco, potatoes, fruits, cattle, hides, gums, oil seeds, jute, timber, saltpeter, etc.

NETHERLANDS

Area and Population. The Netherlands has a land area of 13,202 square miles with a population of 7,808,232.

Physical Features; Climate. Surface is flat, one-fourth being below sea level, and protected from inundation by 1,500 miles of dikes. Owing to proximity of sea, the winters are moderate and the summers cool. The mean annual temperature is about 50°; the maximum, 94°; and the minimum, −5.8° Fahr. Rainfall averages twenty-eight inches annually.

Government. The Netherlands is a constitutional monarchy, governed by the Sovereign and a Parliament, called the States-General. There is a State Council composed of fourteen members, presided over by the Sovereign.

Agriculture. In careful, intensive agriculture the Netherlands is surpassed by no other country. Grain, potatoes, sugar beets, and flax are the chief products. In the provinces of North and South Holland, large areas are devoted to market gardening, fruit, and flower culture. The principal grains, according to the acreage devoted, are rye, oats, and wheat, in order named. Large areas are also devoted to peas, barley, and horse beans. Tulips and other flowering bulbs are exported. Over a third of the country is under permanent pasture for great numbers of the finest dairy cattle.

Fisheries. Herring and oysters are the most important catches.

Minerals. Coal is mined in the Province of Limburg.

Manufactures. Shipyards, breweries, distilleries, sugar refineries, vinegar factories, and salt works are the leading manufacturing establishments. Other industries produce textiles, carpets, leather, paper, chocolate, pottery, gold and silverware, and diamonds.

Colonies. Among the most important of the Dutch East Indies and the Dutch West Indies are Java, Sumatra, Dutch Guiana (Surinam), and Curaçao.

NEWFOUNDLAND

This island, the oldest of Britain's overseas colonies, lies off the northeastern American seaboard, in the latitude of North Dakota. **Area,** 42,734 square miles, not including Labrador. **Population,** 270,000.

Representative **government** granted 1832; responsible, established 1855. Created self-governing dominion in 1926. Executive powers vested in a Governor, with an Executive Council. Legislative affairs under control of the Legislative Council and elected House of Assembly.

The **surface** is a glaciated plateau diversified by hills and drainage basins. The hills usually culminate near the coast, and then spread out into an undulating country consisting largely of barrens and marshes, and intersected by numerous rivers and lakes. The coast-line, 1,200 miles, is deeply indented, affording many good harbors. The fishing ground of the "Grand Banks" stretches 600 miles eastward, a submarine plateau built up of debris deposited by icebergs carried southward by the Labrador current. The **climate** is healthful, summers being short and warm. Mean annual temperature at St. John's is about 40°, ranging from 23.6° for February, to 60.5° for August. Rainfall is abundant, averaging 40.74 inches; and winter snowfall is very heavy, 121.64 inches. Rich **forests** of black spruce, pine, and larch cover large areas, especially in river valleys. Good **agricultural** land is generally found around the lakes and along the rivers, and large tracts are valuable for grazing. The leading crops are hay, potatoes, cabbage, turnips, oats. Live stock (horses, cattle, sheep, swine) are reared. Lumbering is carried on in the north and pulp and paper industry is growing, there being large mills at Grand Falls and Bishop's Falls on Exploits River. Shipbuilding important.

The sea, however, affords the principal occupations, the cod fisheries being the largest in world. Herring and lobsters also important, and much attention given to propagation of lobster.

As to **minerals,** the island is rich in iron and copper ores, and has deposits of coal, silver, lead, gold, asbestos, and petroleum; also vast quarries of building stones, marble, and roofing slate.

Commerce is chiefly with the United States and Canada, leading exports being dried cod, pulp and paper, iron ore, cod oil, herring, seal skins and oil, and canned lobsters. Principal imports are flour, textiles, hardware, salt pork, coal, machinery, tea, and molasses.

NEW ZEALAND

Area and Population. New Zealand proper consists of a number of islands lying about 1,200 miles east of Australia with an area of 103,862 square miles and a population of 1,485,594, excluding about 50,000 native Maoris.

Physical Features. The two largest islands are mountainous, the Southern Alps in South Island culminating in Mount Cook (12,349 feet). North Island has several active and dormant volcanoes, and is noted for hot springs and geysers. Rivers abound, but few are navigable. Lakes are numerous, many of great beauty.

Climate. The climate of New Zealand is distinctly warm, equable, and healthful. The mean annual temperature at Wellington is 55°, ranging from 47° in July to 62° in January; rainfall, 48 inches. Ocean winds from the west cause considerable humidity along the western coast. Relatively dry areas are formed on the east coast, though a deficiency of rainfall is rare.

Government. New Zealand is a self-governing Dominion of the British Empire. The King is represented by the Governor who exercises the executive duties under advice of a Cabinet. Legislative power is vested in the King and a General Assembly of two houses.

In England, the Government of New Zealand is represented by a High Commissioner.

Agriculture. Two-thirds of the area of New Zealand is suitable for agriculture and grazing, but only about 27 per cent of the total area is under crops. Wheat, oats, and barley are the chief products. Large crops of hay and flax are also raised. The olive, vine, and semi-tropical fruits are grown. Live-stock products, principally wool, butter and cheese, frozen and preserved meats, hides and tallow, are the principal merchandise exports.

Forests. There are about 12,592,811 acres of forest land. Kauri pine is most valuable tree for timber and gum. Pine, beech, palm, and great ferns are also found. The woods are devoid of carnivorous animals and deadly reptiles.

Minerals. Gold, discovered in 1857, is the chief mineral product, and has been mined most successfully in Auckland and Otago. Silver is also produced. Excellent coal is found, and a small quantity exported. Kauri gum, a fossil resin, has long been dug with profit. Considerable tungsten ore is available. Other minerals produced are copper, iron, lead, zinc, antimony, and manganese. There are extensive deposits of iron ore, and petroleum has been found.

Manufactures. The leading industries are freezing and preserving meat, making butter and cheese, lumbering, tanning, and woolscouring.

NICARAGUA

Area. The area of Nicaragua is 51,660 square miles, making it the largest Central American Republic.

Population. Inhabitants number 750,000, most of whom are half-castes and aboriginal Indians. Only about 25 per cent live in the eastern half, and they are mainly Indian negroes.

Government. The Republic is governed by a President, with a responsible Council of Ministers, and a Congress of two elected Houses.

Agriculture. Coffee is the principal product. Bananas, sugar, cacao, tobacco, coconuts, and rice are also cultivated. Cattle and swine are raised in large numbers.

Forests. The forests contain mahogany, cedar, rubber, valuable timber, dyewoods, gums, and medicinal plants.

Minerals. Gold is the chief mineral export. Silver, copper, and gems are also found in considerable quantities.

Manufactures. Cheese, butter, leather, sugar, spirits, cigars and cigarettes, shoes, and furniture are the principal products.

NIGERIA

Nigeria, a British colony with an area of 336,778 square miles and a population of 19,081,672, is undoubtedly one of the best developed of the British possessions in Africa. The area includes every form of land, from the dry, hot desert type, to the tropical forests. Agriculture is the chief occupation of the inhabitants, and the principal products obtained are rubber, peanuts, ivory, hides, livestock, ostrich feathers, cacao, and coffee. Timber resources are being exploited to great profit as the forests contain many valuable trees.

NORWAY

Area and Population. The area of Norway is 124,984 square miles. The population, 2,810,592, is preponderantly Norwegian, but includes some 47,000 Swedes and 19,000 Laps, besides some Germans and Finns.

Physical Features. Norway consists of a series of elevated plateaus. The coast is deeply indented by fiords and is fringed by many islands. Most of the eastern boundary is formed by the height-of-land of a steep mountain range known as the Kjölen.

Climate. Warm ocean currents make the climate more moderate in the long winters than might be expected so far north. In the interior, however, especially the northeast, the winters are severe, 60.5° below zero being recorded. The mean annual temperature in the south and west is about 45°. The winter mean in northern Norway is about 2.5°.

Rains and fogs are frequent on the coast. Precipitation varies greatly in different localities; heaviest on coast, decreasing inland. The maximum annual average is 83 inches; the minimum, 12 inches.

Government is a constitutional monarchy, governed by the King and the Parliament (*Storting*). The Storting consists of a *Lagting* (upper house) and *Odelsting* (lower house). The King is the chief executive, exercising his authority through a Council of State.

Agriculture is the occupation of one-third of the population. Chiefly small grains and forage crops are produced. About 3.5 per cent of the total area is under cultivation, and 75 per cent is unproductive. The leading grains are oats and barley. Potatoes and hay are raised in large quantities. Other crops are wheat, rye, and mixed corn.

Stock-raising is an important industry, sheep being most numerous. There are also many cattle, pigs, goats, horses, and, in the north reindeer.

Forests. Seventy-five per cent of the forests are pine, large quantities of which are exported. Other common trees are spruce and birch.

Fisheries. Fishing provides a livelihood for about five per cent of the people. Cod, herring, mackerel, salmon, and sea trout abound, and the oyster and lobster catch is considerable. Whale, walrus, seal, and shark fisheries are also important.

Minerals. The minerals are silver, pyrites, copper, iron, nickel, cobalt, lead, aluminum, zinc, granite, marble, soapstone, slate, feldspar, and apatite.

Manufactures. Sawmills, wood-pulp mills, and smelters take the lead, but coal deficiency and abundance of water-power are stimulating electro-mechanical, chemical, and metallurgical industries.

NYASALAND

This British protectorate, formerly British Central Africa, is on south and west shores of Lake Nyasa. Area, 37,890 square miles; population, 1,329,127 (1,412 Europeans). Climate unfavorable to Europeans. Sheep, goats, horses, cattle, pigs, reared. Products exported: tobacco, coffee, cotton, tea, ivory, beeswax, rubber.

OCEANIA

Omitting Japan and the Malay Archipelago, and omitting also those smaller groups which are mere appendages of the Asiatic and American coasts, the name **Oceania** covers all the remaining islands that thickly dot the wide expanse of the Pacific.

The most convenient natural basis for grouping these islands is found in the submarine mountain systems traversing the ocean bed, of which they are the emerging crests. There are accordingly two great divisions—(1) Australasia, comprising the Australian Commonwealth and New Zealand; and (2) Polynesia, including Melanesia and Micronesia, Fiji, and many scattered groups in the mid-Pacific. The total area of Oceania is about 3,320,000 square miles, over three-fourths in Australia; population, about 8,000,000.

Polynesia proper comprises Marquesas, Phoenix, Hawaii, Samoa, Society, Tuamotu, and many other scattered groups.

The *Gilbert and Ellice Island Colony*, annexed to British Empire by request of natives, 1915, includes Gilbert, Ellice, Union (Tokelau), Fanning, Washington, Ocean, and Christmas (annexed 1919) Islands. Combined area, 166 square miles; population, 23,600 (264 foreigners). Copra, phosphates, and guano are the chief exports.

The *Phoenix Islands* comprise eight small, unattached British islands north of Samoa, near equator. Area, 16 sq. m.; pop., 59.

The *Samoan Islands* lie in mid-Pacific, about 400 miles northeast of Fiji, and 4,160 miles from San Francisco. Group was divided, 1899, between United States and Germany. The German Islands (west of the dividing meridian, 171° W. long.) were allotted, 1920, to New Zealand as mandatory of League of Nations, and are now (1927) named *Territory of Western Samoa*. Area, about 1,133 sq. m., including Savaii and Upolu, largest of group; population, 44,571.

American Samoa includes Tutuila, Manua, and four other islands. Area, 75 square miles; population, 10,055. Pago Pago, Tutuila, is a fine natural harbor and naval station.

Copra is the chief product and only export. Taro, breadfruit, yams, pineapples, oranges, and bananas are also grown.

Besides American Samoa, the Oceanic possessions of the United States include *Hawaii* (treated elsewhere); *Wake Island*, a cable landing; and *Guam* (area 206 sq. m.; pop., 18,521, including 550 whites), a naval station 5,053 miles southwest of San Francisco, 1,506 miles east of Manila. Guam, ceded by Spain in 1898, is the most southerly of the Marianas, and produces abundant fruits and timber and some cattle.

The *Tonga* or *Friendly Islands*, lying south of Samoa, are a Protectorate of Great Britain, ruled by the native sovereign, with the assistance of a partly elective Legislative Assembly. The administration is carried on under the British High Commissioner for the Western Pacific. The islands have a combined area of about 385 square miles, and have a population of 24,935 of whom 23,759 were native Tongans.

The products of the islands are coconuts, plantains, bananas, coffee, arrowroot, tapa (a textile woven from bark fiber), native-woven fishing-nets and mats, and fungus. Copra, fungus and live stock are exported to the United States, Australia, and United Kingdom. Tonga is at times a place of residence of the British High Commissioner for the Western Pacific.

The *Cook Islands* and other islands of the vicinity have belonged to the Dominion of New Zealand since 1901. Area, about 280 square miles; total population, about 14,451. The chief products of the islands are copra, coffee, pearl-shell, fruits, hats, and lime-juice.

The *French Establishments in Oceania* have an area of about 1,544 square miles, and a population of 36,860, of whom 80% are natives. They are administered by a Governor, with an Administrative Council. The main groups are the *Society* (Tahiti, Moorea, etc.), *Leeward*, *Tuamotu*, *Marquesas*, and *Gambier*, *Tubuai*, and *Rapa Islands*. The chief products are copra, phosphates, coconuts, sugar cane, bananas, oranges, and vanilla. Pearls and mother-of-pearl are important fishing products. Tahiti is the most important island.

Melanesia ("Islands of the Blacks") is the name applied to the islands stretching from New Guinea through the Bismarck Archipelago, Solomon Islands, Santa Cruz Islands, New Hebrides, and Loyalty Islands, to New Caledonia. The name is derived from the inhabitants, who are of negro type, possessing curly hair. The Melanesians are most purely represented by the Papuans of New Guinea, who are thought to be of same stock as African negroes.

Dutch New Guinea, part of New Guinea (Molucca Islands) west of 141° E. long., has an area of 160,692 square miles, and a population estimated at 195,460. It was created a province in 1920. Rich in tropical forests and plants; but little is known of the country.

Northeastern New Guinea (formerly Kaiser Wilhelm's Land) was allotted to Australia in 1920 under Mandate. Area is 91,000 square miles, population 456,900. The cultivated area is chiefly under coconuts, rubber, cotton, and tobacco. Areca and sago palms, cedar, sandalwood, bamboo, ebony, and other woods abound. Mother-of-pearl and trepang are found in the sea, and gold in the Bismarck Mountains.

The *Bismarck Archipelago*, former German Protectorate, was allotted to Australia, 1920, under mandate. Area, 14,500 square miles; population, 134,262. Large trade in copra, cotton, rubber.

The *Solomon Islands* have a total area of about 14,400 square miles (population 196,625), of which 11,000 square miles are in a British Protectorate, and 3,400 square miles (population 46,109) are former German territory allotted 1920 to Australia as mandatory of the League of Nations. Coconuts and rubber are chief products. Copra, sandalwood, vegetable ivory, and tortoise shell are exported.

The *Santa Cruz Islands* are heavily wooded. They are administered by Resident Commissioner of Solomon Islands Protectorate (British). Area, 363 square miles; population, 7,000. Copra is produced.

The *New Hebrides Islands* are jointly administered by British and French Resident Commissioners. Area, 5,700 square miles; population, about 61,644. Coconuts, maize, coffee, cotton, cacao, bananas are grown. Kauri and sandalwood exported. Sulphur, copper, iron, and nickel found.

New Caledonia is a French colony administered by a Governor, Privy Council, and elective Council-General. Area, 8,458 square miles; population, 51,363. Crops chiefly coffee, copra, cotton, maize, tobacco, fruits. Cattle and sheep extensively reared. Ranks next to Ontario as source of world's nickel supply. Chrome, lead, and cobalt ores, and coal also produced. The dependencies of New Caledonia are the Isle of Pines, Wallis Archipelago, Uvea Islands, Loyalty and Huon Islands, Futuna, and Alofi.

Micronesia ("Little Islands") comprises many islands north and northeast of Melanesia, really crests of a submarine ridge which sweeps from the east cape to New Zealand northward through the Fiji and Tonga Islands and on through the Gilbert and Ellice, Marshall, Caroline, Marianas, and Ogasawara (Bonin) groups. The Micronesian natives are a branch of the Polynesian family, somewhat hybridized by Melanesian-Asiatic infusions.

The *Marshall Islands*, annexed by Germany in 1885, were allotted under mandate to Japan, 1920. Area, 160 square miles; population, 9,800 (198 Japanese). Copra and phosphates largely exported. Nauru, just south of the equator, an islet rich in phosphates, was allotted to the British Empire.

The *Caroline* and *Pelew Islands* and the *Marianas* (*Ladrone*) *Islands* (except Guam, the largest of the Marianas) were bought by Germany from Spain, 1899, but were allotted under mandate to Japan, 1920. Combined area, about 800 square miles; population, 103,534. Copra is the principal export.

PALESTINE

Palestine, comprising that part of the "Holy Land" west of the Jordan Valley to the Mediterranean Sea, was turned over to Great Britain under Mandate by the League of Nations, with the object of establishing therein a National Home for the Jews.

Area and Population. The area of Palestine, under the terms of the Mandate, is about 9,000 square miles. The population is 816,060 of which about 80 per cent are Moslems. The Jewish Settlements are grouped in four districts, Judea, Samaria, Lower Galilee, and Upper Galilee.

Physical Features and Climate. The coastal country, devoid of many good harbors, is 15 to 20 miles wide and rises to a rough plateau which, farther east, drops steeply into the Jordan Valley and Dead Sea depression. The climate is hot during the summer, but winters are mild as in Southern Italy. Rainfall is light in the interior.

Government. The British High Commissioner and an Executive Council are responsible for the execution of the laws. Legislative power is vested in a partly elected Legislative Council. The Zionist Organization is represented by National Committee.

Resources and Industries. The majority of the inhabitants of Palestine are engaged in agriculture. Chief crops are wheat, barley, durra, lentils, olives, citrus fruits, and tobacco. Considerable life-stock is raised, principally sheep, goats, and camels. Manufactures of export importance are olive-oil, soap, and wine. There are many small factories and industries, including soap, brick, tile, and tobacco factories, oil and flour mills, and distilleries. Rock salt, sulphur, carnalite, cooking salt, and bromide are the only minerals of economic value.

PANAMA

Panama was formerly a Department of the South American Republic of Columbia, but declared its independence and was established as a separate republic in November, 1903. It has an **area** of 32,358 square miles. Its **population,** exclusive of the Canal Zone, is 472,468, largely mixed Spanish, Indian, and negro elements, with about 3,500 Chinese and 40,191 British West Indians. **Government** comprises a President, directly elected for four years and ineligible for next term, who is assisted by a Cabinet of five Ministers. Legislature, an elected Chamber of Deputies (33 members), meets biennially.

The dominant **physical feature** is the Cordilleran range of mountains traversing the length of the republic. As Panama lies only between 8 and 10 degrees north of the equator, its **climate** is distinctly tropical. The average temperature varies but slightly in different sections. Fully 85 per cent of the yearly rainfall of 127 inches comes with southeast winds between mid-April and mid-December.

Industries and Resources are developing. Commerce is chiefly with the United States, the leading products exported being bananas, cacao, coconuts, indigo, tobacco, sugar-cane, rubber, ivory nuts, turtle shells, pearls, and mahogany. Coconut plantations are increasing. Rich manganese deposits have been found.

PARAGUAY

Area and Population. Excluding the area of Gran Chaco country between the Paraguay and Pilcomayo rivers, in dispute with Bolivia, the area of Paraguay would be about 61,647 square miles. Area including Gran Chaco claims about 173,700 square miles. The population of Paraguay is 933,330, the inhabitants being largely of mixed race, descendants of Spaniards, Guarani Indians, and negroes.

Physical Features. The Paraguay River divides the Republic into two sections of different characteristics. Eastern Paraguay is an undulating plateau traversed by ranges of low hills. Western Paraguay is a low plain subject to periodical inundation. The two great rivers are the Paraná and the Paraguay.

Climate. The climate of Paraguay is subtropical, but, on the whole, cooler and more healthful than in many other regions of the same latitude. The mean annual temperature is 75°. Rainfall is abundant, averaging about 60 inches, and being heaviest in August, September, and October.

Agriculture. In Paraguay, soil and climate are favorable to nearly all tropical and temperate-zone growths, and agriculture is the main source of wealth. A characteristic plant receiving much attention is yerba maté ("Paraguay tea"), of which a great amount is exported annually, and which is used as a beverage by as many as 12 million people in South America. Tobacco is a large crop, and cotton, being indigenous, grows abundantly. Maize, manioc, sugar-cane, coffee, rice, beans, and other useful crops are also cultivated. Orange-growing is important, and bananas, grapes, and other fruits are also abundant. Stock breeding, especially of cattle and horses, is extensively pursued.

Forests. In Eastern Paraguay the forests are an important source of wealth. They contain many valuable timber trees and several species of dyewood.

Minerals. The minerals of Paraguay include rich deposits of iron and manganese, and some copper. They are, however, but little developed.

Manufactures. Meat-packing and preparation of hides, tallow, and other animal products, sugar refining, and the production of quebracho extract are well-established industries. Distillation of "oil of petit grain," from the leaves of the sour orange, is another important branch of manufacture. Brick and pottery, leather, furniture, and liquors are made for home consumption. Lace-making is an important industry.

Government. Executive power is vested in a President, elected for four years, and assisted by a Cabinet; legislative, in a Congress of two elected houses.

PERSIA

Area and Population. The area of Persia is 628,000 square miles. Inhabitants number about 9,000,000. About one-fourth of the people are nomads, of whom Turks, Kurds, and Leks are the principal races.

Physical Features. The surface is an elevated plateau bordered on the north, west, and east by lofty mountains. Interior is largely an arid, treeless desert. The maritime plains and mountain slopes are heavily forested.

Climate. The climate varies considerably according to locality. In the thickly wooded Caspian region of the north, where rains are frequent and the humidity is very great, the summers are hot; on the high tablelands the range between extremes in temperature becomes wide. The dry and barren maritime tracts of the south are very hot in summer, but the winters are agreeable.

Government. Persia is nominally a constitutional monarchy under a hereditary Shah, with legislative power vested in a National Council (Majlis). Actual administration of the country is in the hands of a Cabinet.

Persia's geographical position—that of a buffer state between rival interests, British, Russian, and (formerly) German—has made it a battleground of diplomatic controversy and intrigue.

Agriculture is limited chiefly to the higher slopes of the plateau and the well-watered mountain valleys.

Wheat, barley, rice, and cotton are the chief products. Fruit, hemp, tobacco, gums, opium poppy, oil, and dye plants are also grown and exported. Stock-raising is important.

Forests. Valuable forests grow on the Caspian slopes and in the western mountain provinces.

Minerals. Turquoise mines of Khorasan yield rich royalties. Petroleum fields near Caspian Sea have a large production. Coal worked on Elbruz slopes; lead in Khalkhal region. Gold, copper, silver, tin, sulphur, mercury, cobalt, iron, manganese, and nickel occur. Salt and borax also produced.

Manufactures. The weaving of rugs and carpets is by far the most important industry. Tabriz, Hamadan, Sultanabad, Kerman, and Kermanshahan are the great centers of manufacture. Shawls are made in Kerman and Mash-Had (Meshed), and silks in Khorasan, Kashan, and Yezd. Cotton goods are also important. The manufacture of rosewater is an important industry in Kashan and Fars.

PERU

Area and Population. The area of Peru, not including the territory claimed by Peru in Ecuador, is 552,796 square miles. The population is about 6,147,000, besides many uncivilized Indians whose numbers are not even approximately known.

Physical Features. Peru consists, in the main, of an elevated plateau traversed by three chains of the Andes Mountains. Along the coast lies a strip of land about twenty miles wide, comprising the greater part of the arid zone of western South America. In the southwest are several quiescent volcanoes, some over 20,000 feet in altitude. The highest peak in Peru is Mount Coropuna, 22,802 feet. East of the Andes lies the Montaña region, comprising the densely wooded slopes merging into the Amazonian plain. Only a few short, rapid streams flow into the Pacific. All the important rivers are headwaters of the great Amazon, which has its main source in Lake Lauricocha, on the western slope of the central Cordillera in Peru.

Climate. Rain seldom falls on the Peruvian coast; but the climate is not unhealthful. Many of the valleys of the Cordilleras and the slopes of the Montaña region are wet and hot. The mean annual temperature at Lima, near the coast, is about 70°, ranging from 56° in winter, to 84° in summer; at Cuzco (11,400 feet elevation), 59°.

Government. Executive power is vested in a President elected for five years, assisted by a Cabinet responsible to him; legislative, in a Senate and a Chamber of Deputies, both elected by direct popular vote.

Agriculture. The leading agricultural products are sugar, cotton, coffee, cacao, tobacco, and rice. The principal coffee-growing districts are in Central Peru. The coastal region, where irrigation is extensively practiced, is the chief sugar district. In the Sierra region, all the products of the temperate zone are raised. Live stock are extensively reared, the principal wool-bearing animals being the alpaca, sheep, and llama.

Forests. Luxuriant tropical forests, providing valuable cabinet and medicinal woods, cover the eastern slopes in the Montaña region. Rubber and cinchona are prominent forest products, the latter being known as "Peruvian bark," from which quinine is extracted.

Minerals. Mineral wealth is abundant, petroleum, copper, silver, gold, and coal being the most important products. About 90 per cent of the world's supply of vanadium comes from Peru. Tungsten, lead, salt, borates, antimony, molybdenum, and mercury are also produced. The extraction of guano is regulated by the government.

Manufactures. The chief manufactured products of Peru are coarse cottons, woolens, flour, leather, fine cloaks and blankets, Panama hats (for which straw is largely imported from Ecuador), and gold and silver jewelry. Olive oil, cottonseed oil, cocaine, and distilled liquors are extensively produced. Commerce is chiefly with the United States.

PHILIPPINE ISLANDS

Area and Population. The Philippine Archipelago, physically and racially a part of Malaysia, but politically an outlying possession of the United States, numbers about 7,083 islands. The total area, including the Sulu Islands, is estimated at 114,400 square miles. The population is 11,913,167.

Physical Features. As part of Malaysia, the Philippines share the general features of that archipelago. The islands are mountainous, with many volcanoes. Highest elevation, Mount Apo (9,450 feet), on Mindanao. Many fertile plains and valleys. The larger islands abound in rivers and lakes. Coasts afford many natural harbors, but are steep and rugged on the east.

Climate. The climate of the Philippines, generally speaking, is tropical, the mean temperature in Manila reaching 80°. Conditions differ considerably, however, in the different islands, the equability along the coast disappearing inland where the altitude is high. Rainfall is heavy, the mean annual at Manila amounting to 76 inches. As low as 15 inches falls in parts of Mindanao, and as high as 152 inches at Masinloc on the western coast of Luzon.

Government. The whole of the archipelago is under civil government. The chief executive is the Governor-General, under whom are Secretaries of 6 executive departments, all Filipinos except the Secretary of Public Instruction, who is also Vice-Governor, and who, like the Governor-General, is appointed by the President and confirmed by the Senate of the United States. The Departments are: Interior, Finance, Justice, Agriculture and National Resources, Commerce and Communications, and Public Instruction.

The Legislature comprises 2 houses—a Senate and a House of Representatives. Both houses are elected, excepting 9 Representatives and 2 Senators appointed by the Governor-General to represent certain "special" Provinces. Each Province has a Governor, elected in most cases, who, with two other members, forms the governing Board.

Agriculture is advancing, but native methods are still primitive. Most of the people live on the soil, and, though holdings are generally small, more than half of the 12 million acres of arable land is cultivated. Soil is very rich, and adapted to all tropical plants. Rice leads all crops in value and, with the yam or sweet potato, is the staple food of the natives. Coconuts and oil, sugar, hemp, corn, and tobacco are the other great crops. Fruits grow wild, and are not largely cultivated. Pineapples are grown chiefly for the fiber they supply.

Large areas are devoted to pasturage, supporting mainly the water buffalo or carabao, other horned cattle, and ponies. Pigs and chickens are numerous, but sheep and goats do not thrive.

Forests. About half of the land is forest-covered. The products are of great value, chiefly rare hardwoods for cabinet work, shipbuilding, etc., fibers, gums, fruits, and dyes. The trees are chiefly banyans, bamboo, pine, rubber, gum, fruit, and medicinal.

Fisheries. The waters surrounding the islands abound in food fishes of many varieties. Fish caught in inland waters provide the natives with an abundant food supply. Molluscs are particularly numerous. Pearl fishing is an important industry in the Sulu Islands.

Minerals. The Philippine Islands possess considerable mineral wealth, though little has been done to develop the resources. Gold is found in nearly all the large islands, this mineral having long been worked by the natives. Copper is also very widely distributed. Large, high-grade deposits of iron occur in Luzon, Cebu, and Panay. Silver has been found alloyed with gold, and in argentiferous galena. Platinum occurs in small amounts in Luzon. Lignite coal of exceptionally good quality has been found in Cebu and Batan and some important fields have been opened. Other mineral products are sulphur, manganese, rock salt, kaolin, borax, and gypsum.

Manufactures. Manufacturing industries are as yet only slightly developed, but are making rapid advances. The most important is cigar and cigarette manufacturing. Sugar and rice mills are numerous, and there are a few shipbuilding plants and lumber mills. Important industries are the preparation of copra and coconut oil and Manila hemp for shipment.

The principal native industries are the weaving of cloth fabrics, and making of straw hats, mats, and cordage. The beautiful Pina muslin is woven from a fiber supplied by the pineapple plant, and Manila hemp is the fiber from the leaf-stalks of a plantain or species of banana tree.

POLAND

Area and Population. The area of Poland is 149,915 square miles with a population of 30,408,247, about two-thirds Poles.

Physical Features. The surface consists in general of an undulating plain comprising gentle slopes, rich alluvial flats, and some sandy tracts and marshes. At the south it culminates in the Carpathian Mountains on the border of Czechoslovakia. Three-fourths of the country is drained into the Baltic at Danzig, by the Vistula River and its tributaries, chiefly the Bug.

Climate. The climate is invigorating, though tending to extremes. Winters are long and rigorous. Rainfall is generally ample for cultivation.

Government. Under the Constitution adopted March 18, 1921, legislative power is vested in a national parliament (*Sejm*) of two houses, a Diet and a Senate, both elected by universal suffrage (both sexes, age 21). The President is elected by both houses jointly, for a 7-year term.

Agriculture is the chief occupation. The productive area is about 85 per cent of the whole, the principal crops being rye, oats, wheat, barley, potatoes, sugar-beets, hemp, hops, tobacco, chickory. Stock-raising is extensively followed. **Forests** cover over one-fifth of the country, being densest on the Carpathian foothills. **Minerals** are abundant. Coal deposits underlie 3,200 square miles. Iron ore is another rich resource. Salt deposits are practically inexhaustible. Galicia produces over 5,000,000 barrels of petroleum annually, also much potash. **Manufactures** are of vast importance. Industrial centers are at Warszawa (Warsaw), Lodz, Kracow, Dabrowica, Katowice, and Czestochowa. Cotton and wool spinning, manufacture of various kinds of paper, chemicals, timber, and refined sugar are the leading industries.

PORTO RICO

Area. Porto Rico, one of the outlying possessions of the United States, is fourth in size of the Greater Antilles. Including its dependent islands, it has an area of 3,435 square miles.

Population. The population was 1,299,809 in 1920 and 1,543,913 in 1930. Nearly 30 per cent of the inhabitants are mulattoes or negroes.

Physical Features. The surface of Porto Rico is broken by mountain ranges of moderate elevation extending in general from northeast to southwest, with altitude ranging from 1,500 to about 3,750 feet, the highest elevation being that of El Yunque. The mountains are cultivable to their summits. Numerous rapid-flowing streams afford abundant water-supply, the largest rivers flowing northward. The coast-line has but few good natural harbors, though there are many bays, inlets, and lagoons.

Climate. In the Western Hemisphere, within the torrid zone, no region surpasses Porto Rico in general healthfulness. The temperature rarely reaches 100°, and never falls below 50°; and during summer it is never above 95° on the coast. Rainfall is copious, averaging 64.5 inches annually.

Government. Executive power is vested in a Governor, assisted by an Executive Council comprising the heads of the various departments. Legislative powers are vested in a Legislature of two elective houses—a Senate and a House of Representatives. Porto Rico is represented in the United States Congress by a Resident Commissioner elected by the islanders for a four-year term.

Agriculture. The soil of Porto Rico in general is extremely fertile, and is largely under cultivation, agriculture being the principal occupation of the people. The plantations are chiefly on the coastal plains and in the river valleys. South of the mountain ranges, because of the droughts that sometimes prevail, irrigation is widely practiced.

Cane sugar is the staple agricultural product of Porto Rico. Under American administration, efficient modern methods have supplanted the primitive methods under which the sugar industry was formerly conducted, and production has greatly increased.

Other leading products are: tobacco, coffee, pineapples, grapefruit, oranges, and other tropical fruits, coconuts, sea-island cotton, vegetable textile fibers, and vegetables. Figs, date palms, and tamarinds grow readily An extensive district in the northeast has conditions especially favorable for stock-raising. Beef and dairy cattle, horses, and swine are reared. Large numbers of beef cattle are also raised on the island of Vieques.

Minerals. The island has a varied abundance of mineral resources, but there are few established mining enterprises. Valuable salt deposits are worked at Guanica, Salinas, and Cabo Rojo. Sulphides of copper, and magnetic oxides of iron, are found in large deposits. Placer gold is taken from the beds of many of the mountain streams. Silver, bismuth, tin, mercury, nickel, and platinum are other metals found. Marble, lignite, and amber also occur, the two latter chiefly around Utuado and Moca. Clays of superior quality are plentiful.

Manufactures. Sugar factories account for about two-thirds of the total manufactured production of the island. Other leading products, named in order of value of output, are: coffee; cigars, cigarettes, and plug tobacco; bread and bakery products; foundry and machine shop products; printing and publishing; clothing; ice; boots and shoes; bay rum; mineral and soda waters; flour and grist. Among articles of native handiwork, the most important are straw hats, baskets, embroideries, drawn-work, and rush pack-saddles.

PORTUGAL

Area and Population. The area of Portugal is 35,979 square miles, including the Azores (907 square miles) and Madeira (285 square miles), which are regarded as integral parts of the Republic. The population of Portugal is 5,621,977.

Climate. The climate of the country is generally temperate and equable along the coast, but prevailing high altitudes in interior cause a considerable range between annual extremes of temperature. Rainfall is excessive on northern part of coast, but scanty south of the Tagus, where hot winds from Africa prevail. The climate of the Azores and Madeira is mild.

Government. Since the overthrow of King Manoel II in 1910, Portugal has been a Republic, governed by a President and two Chambers. The President of the Republic is elected by the Chambers for 4 years.

Agriculture. Only about one-third of the land is cultivated. Agricultural methods are very primitive, and large tracts of good lands lie idle. Corn, rye, and wheat are the chief cereals. Grapes, olives, figs, tomatoes, oranges, onions, potatoes, barley, and beans are also grown. Oxen, sheep and goats are raised on the pastures.

Forests. About 17 per cent of the country is under forests. Pine, oak, chestnut, and cork are the most important trees. The annual output of cork is high.

Minerals are but little developed. Wolfram is the most important, others being iron, copper, manganese, antimony, lead, tin, and gold.

Manufactures. Wine is the chief product (Madeira, Porto, and Villa Real). Textiles, cork products, ships, lace, porcelain tiles, chinaware, and olive oil are also important manufactures.

Fisheries. Sardines, tunny, and cod are the main catches.

Colonies. The colonies in Africa and Asia comprise an area of 936,017 square miles. The largest are Angola (West Africa), Mozambique (East Africa), Portuguese India, Timor, Guinea, and Cape Verde Islands.

RHODESIAS, THE

The Rhodesias lie south of Belgian Congo and Tanganyika Territory; divided into Northern and Southern by the Zambezi. Area of Southern, 149,000 square miles, population 1,033,000 (40,000 Europeans); of Northern, 291,000 square miles, population, about 1,262,000 (7,500 whites). Each is administered by a Governor, an Executive Council, and a Legislature. Northern Capital, Livingstone; Southern, Salisbury.

The Rhodesias are rich in gold. Other minerals produced are silver, copper, chrome ore, asbestos, zinc, lead, wolframite and scheelite (tungsten ores), antimony, diamonds, and coal.

Both countries are well adapted for agriculture and grazing. Irrigation necessary in some parts. Maize is the chief cereal crop; wheat also grown; and rubber, cotton, fruits, and tobacco are produced, principally in Northern Rhodesia. Live stock extensively reared in Southern Rhodesia. Forests in Northern Rhodesia are extensive.

ROMANIA

Area and Population. The area of Romania is 122,282 square miles and the population, 18,000,000.

Physical Features. With the exception of the Dobrudja, a steppe-like pastoral plateau along the Black Sea coast, the greater portion of Romania is level, in part an extension of the fertile Black Earth Zone of U. S. S. R. The Carpathian Mountains run down from the north, swinging in a great curve to the west throuth the heart of the country, where they are known as the Eastern Carpathians or Transylvanian Alps. The Delta of the Danube lies wholly within Romania, and almost the entire country is watered by the affluents of that great river system.

Climate. The climate is one of extremes and wide range. The mean annual temperature at Bucuresti (Bucharest) is 51°, with a range of over 100°. Insufficient and irregular rainfall makes the latter part of summer very dry.

Government is a constitutional monarchy. Legislative power rests in a Parliament of two houses. Executive power rests in a Council of Ministers.

Agriculture engages about 80 per cent of the people. The chief crops are corn, wheat, barley, oats, and rye. Under normal conditions much tobacco is grown, and considerable sugar beets, beans, oil seeds, fruit, flax, and hemp. Live stock are extensively reared. **Forests** of oak, beech, pine, and fir total 16,918,964 acres. **Minerals** abound. Coal, copper, iron, and manganese are worked, and the great salt mines have been a State monopoly since 1863. Petroleum is exported. **Manufactures** include flour, liquors, and refined sugar.

ST. HELENA

St. Helena, an island belonging to Great Britain, 1200 miles west of the coast of Angola, has an area of 47 square miles, and population of 3,795. The principal products are flax and fruits, and the leading industry is lace-making. Excellent timber flourishes on the island, but is used only for home consumption.

SALVADOR

Area. Salvador has an area of 13,176 square miles.

Population. Population estimated at 1,700,000, chiefly Indians and half-castes, besides a large foreign element.

Government. The Republic is governed by a President and Cabinet, and a Congress of Deputies.

Agriculture is the principal industry. Coffee is the great product of the country, and is extensively exported. Cacao, tobacco, cotton, sugar, fruits, indigo, bananas, hemp, and sisal are also produced. Cattle, horses, sheep, and pigs are raised, and hides are exported in considerable quantity.

Forests. The forests abound in valuable timber, resins, and gums. Rubber is an important product for export trade. Medicinal plants flourish. Balsam is extensively cultivated about Cape Remedios.

Minerals are growing in importance; gold, silver, copper, lead, iron, and mercury are worked chiefly in the Metapan District.

SAN MARINO

The area of San Marino is 38 square miles and the population is 13,013. Located on Emilia-Marches border, near the Adriatic. Republic is governed by an elected Great Council of 60 members (two appointed Regents). Independent since 1231, claims to be oldest state in Europe. It maintains an army, makes foreign treaties, and issues its own coins and postage stamps. Wine and cattle are the chief products.

SIAM

Area and Population. The total area is 200,148 square miles; population, 11,506,207. The **climate** is hot but not unhealthful. **Government** is a constitutional monarchy. The King is assisted by a Cabinet and appointed legislature.

Agriculture. Rice, chief crop and export, is staple food. Coffee, cotton, hemp, tobacco, sugar also grown; fruits abundant; silk cultivated. Other products, hides, gamboge, lac, spices, dried salt fish, cattle. **Forests,** in north, of teak, ebony, rosewood, cedar, indigo; on coast, mangroves, banyan, areca, coconut, etc. Most important **mineral,** tin; others tungsten, iron, manganese, coal, and gems. **Manufactures:** Silk and cotton cloths, shoes, gold and silver work, paper, pottery, mats, arrack.

SOUTHWEST AFRICA

Southwest Africa (formerly German Southwest Africa) has an area of 322,393 square miles, and a population of about 258,905 (24,115 whites). The chief industry is pastoral. Sheep and goats are most numerous. Irrigation necessary for agriculture, except in northwest. Principal crop, corn. Wheat, cotton, and tobacco grown.

Copper, lead, tin, and diamonds are mined, and gold, asbestos, graphite, and valuable colored marble occur.

SPAIN

Area and Population. The total area of Spain is 195,010 square miles, including the Balearic Islands and the Canary Islands, regarded as integral parts of the kingdom. The population is 22,601,753, consisting of three principal groups, Castilian, Catalan, and Galician. Besides these, there are about 400,000 Basques on the north coast, 60,000 Morescoes in the south, 50,000 gypsies, and 7,000 Jews.

Climate. With the exception of the northern and northwestern regions and the southern coast bordering on Africa, there is a wide range of temperature between summer and winter. The mean annual temperature ranges from 53° on the interior tableland, to 70° in the extreme south. The climate is generally dry. In parts of the northwest maritime regions, however, there is much rainfall.

Government. A constitutional monarchy governed by the King and the Cortes, the latter composed of a Senate and Congress.

Agriculture. About 88 per cent of the soil is capable of production, though only 44 per cent is actually used for the growing of food. Agriculture employs about one-fourth of the people, but is hampered by deficient and irregular water supply. Except in the north and northwest, the land is semi-arid and requires irrigation. The leading crops are wheat, barley, oats, rye, corn, beans, peas, tares, vetches, rice, meslin, lentils, and millet. Grapes, olives, sugar beets and cane, flax, hemp, oranges, and nuts are also grown. About six hundred million gallons of wine are produced annually.

Cattle raising and dairying are carried on in the northern provinces. The vast flocks of fine-fleeced merino sheep once raised have dwindled considerably, though there are still over 20,000,000 sheep in Spain.

Fisheries. Sardines, tunny, and cod are the main catches.

Minerals. Spain is rich in mineral wealth. Coal, lead, copper, and iron are the principal minerals. Much zinc, mercury, sulphur, silver, manganese, and salt are also mined.

Manufactures, except wine, olive oil, and corks, are chiefly for home consumption. Textiles, paper, glass, leather, and metals are the important products.

Colonies. Spain has gradually lost her great colonial possessions. All that now remain are in Africa, with a few adjacent islands. The principal colonies are Rio de Oro and Adrar, Spanish Guinea, Spanish Morocco, and Fernando Po.

STRAITS SETTLEMENTS

The Straits Settlements, a British Crown Colony, comprise *Singapore* (Singapore, Labuan, Christmas, and Cocos Islands), *Penang* (including Province Wellesley and the Dindings), and *Malacca.* **Area,** 1,600 square miles. The **population** consists chiefly of Malays, Chinese, and Indians, is 1,168,806. The colony is administered by a Governor, Executive Council, and Legislative Council.

Singapore, free port and port of call for almost all steamers between Europe and the Orient, is the world's greatest rubber market. Contains largest tin smelters. Chief exports, tin, rubber and other gums, copra, spices, tapioca, sago, rattans, gambier, hides, phosphates, and preserved pineapples.

SWAZILAND

Swaziland, annexed during the Boer War of 1899–1900, lies at southeast corner of Transvaal. It is under the control of the British Government, authority resting in the High Commissioner for South Africa, through a Resident Commissioner. Area, 6,678 square miles; population, 130,680, of whom about 2,500 are whites.

The products are maize, tobacco, millet, beans, pumpkins, ground-nuts, and sweet potatoes, grown only for local food supply. There are considerable numbers of sheep, cattle, and pigs, and some horses. Minerals are abundant, but little developed. Gold and alluvial tin are exported.

SWEDEN

Area and Population. Sweden has an area of 173,105 square miles and a population of 6,105,190.

Physical Features. The surface of Sweden consists of a narrow plain, sloping toward the Baltic Sea, which is diversified by numerous valleys and lakes. On the west the plain is bordered by the Kjölen, a range of mountains which form part of the boundary with Norway. The coast is broken by many bays and inlets.

Climate. Owing to the wide range of latitude, the extremes in temperature vary considerably north and south. In the extreme north the mean annual temperature is 26.6° Fahr. At the southern extremity, it rises to 44.6°. Temperatures vary also according to the elevation. The range between extremes for summer and winter is greatest in the north interior, where the average for winter is 3.8°. This rises in parts of the south to 32°. The July temperatures are more uniform all over the country. Rainfall, heaviest near coast, averages about 20 inches annually. It ranges from about 17 inches in the north, to 40 to 45 inches in the south.

Government. Sweden is a constitutional monarchy administered by the King, Cabinet (*Statsrad*), and Parliament (*Riksdag*). The Parliament consists of two chambers.

Agriculture employs about half the population of Sweden. Over nine per cent of the total land area is now under cultivation, an area which is constantly increasing by the reclamation of extensive wet lands. Oats and rye are raised most abundantly; potatoes, wheat, barley, beans, peas, and sugar beets are also important products. In recent years meat cattle have become valuable for export. Sheep, pigs, and horses are numerous.

Forests. About 58 per cent of the area of the country is forested. Timber and its products (lumber, pulp, paper, etc.) constitute fully half of all exports.

Minerals. Sweden is one of the chief producers of iron ore in Europe. Large quantities of silver and lead ore, zinc ore, manganese ore, sulphur, and a little gold are produced. Large deposits of coal are found in the south.

Manufactures are not very extensive, but have a great potential future in the vast water-power of the country. Iron and steel industries, sawmills, flour, paper, and sugar mills, match factories, porcelain and glass factories are the leading establishments.

SWITZERLAND

Area and Population. Switzerland has a total area of 15,940 square miles, or about twice that of the state of Massachusetts. The population of 4,018,500 consists of about 68 per cent German-speaking, over 21 per cent French-speaking, about 8 per cent Italian, and 1 per cent Romansh.

Physical Features. The surface is two-thirds mountainous, the Alps in the south and east, the Jura in the north and west. The region in between is an irregular upland diversified by lakes and valleys.

Climate. The country presents great contrasts in temperature and rainfall, owing to wide range of elevation. The mean annual temperature ranges from 53° at Lugano (elevation about 900 feet), to 29° in the great St. Bernard Pass (8,111 feet). At Bern, the mean is 46.8°, ranging from 64.8° in July to 29.4° in January; rainfall, 39.61 inches.

Precipitation (rain and snow) varies from about 87 to about 22 inches.

Government. Switzerland is a Republican confederation of twenty-two cantons. Each is locally governed on the basis of absolute popular sovereignty. The first magistrates of the Confederation are the President, and the Vice-President of the Federal Council, both elected by the Federal Assembly for one-year terms. The Federal Assembly consists of the National and State Councils chosen by popular suffrage.

Agriculture. About 22.4 per cent of the total area is unproductive. The productive area, including pasture land, arable land, and forest, is very equally divided among the population. The principal crops are wheat, rye, oats, and potatoes. Large areas are devoted to vineyards, and large quantities of wine are produced in five of the cantons. Barley, corn, tobacco, sugar beets, and vegetables are also raised. Ranked according to acreage, the principal crops are wheat, oats, rye, vines, barley, and maize. The greatest acreage, however, about 20 per cent of the productive area, is in pasture land, and the chief agricultural industry is dairying. Switzerland is noted for the quality and amount of cheese produced. Large quantities of condensed milk are also prepared for export. Beekeeping is extensively carried on.

Forests. Forest land aggregates 3,762 square miles, over two thirds of it under cantonal or municipal control. The species are chiefly maple, beech, and pine.

Fisheries. The lakes and water courses of Switzerland provide fish in considerable quantities. There are many establishments engaged in the hatching of food fishes, and large quantities are produced for home consumption.

Minerals. Salt is the chief mineral product. There are two salt mining districts. Marl, clay, and limestone are also found, and used in making cement. Asphalt is worked in Neuchâtel. Some iron, copper, and lead are produced.

Manufactures. The textile industries combined are the largest and most important branch of manufacture—silks, cottons, linen, woolens, lace, embroideries, and clothing manufacture. Silk and cotton goods comprise nearly half the total value of the country's exports.

Other important manufacturing industries are watch, clock, and jewelry making, woodworking, and metal working. There are large machinery plants, breweries, chemical works, and provision factories. Shoe making, wood carving, and making of gloves, pottery, and tobacco products are also thriving pursuits.

Resorts. The greatest industry in Switzerland, from the standpoint of receipts, is the entertainment of tourists. Millions of dollars are invested in hotels, and over 80,000 people are employed in the maintenance of these establishments.

SYRIA

(Republics of Alaouites, Djebel Druze, Lebanon, and Syria)

This territory, consisting of five former partially autonomous states, was detached from Turkey after the World War, its independence recognized, and given to France for administration under Mandate by the League of Nations. For administrative purposes it is divided into the following four states:—Syria, Lebanon, Alaouites, and Djebel Druze.

Area and Population. Syria consists of the area traversed by the mountain chains of the biblical Lebanon, together with the greater part of the valley of the Euphrates lying between the 34th and 37th parallels, an area of 57,460 square miles. The majority of the population, 3,022,646, is of Arabic origin and that language with many dialectical variations, is spoken by most of the inhabitants. Since 1920 there has been a large influx of foreigners among which are Jews, Persians, Turks, Kurds, and Armenians.

Government. Each of the states has a form of republican government, modified to meet its individual requirements. The acts of the presidents or governors, and their respective law-making and executive bodies, are subject to the sanction of the French High Commissioner who is the supreme governor under the terms of the Mandate.

The chief capital, where the French Commissioner resides, is Beyrouth (Beirut).

Resources and Industries. Syria is an agricultural country, with over 10 per cent of the land, much of which is valueless, under cultivation. Wheat is the chief cereal crop with barley, durra, corn, oats, and rye following in the order named. Vegetables and fruits are raised in profusion, and tobacco, hemp, and cotton are also produced. Considerable quantities of lentils, vetches, chickpeas, and beans are also cultivated. The citrus fruit industry has increased in recent years. Cattle-breeding and sheep-raising are also important.

Although there are indications of mineral wealth, very little development has taken place. Some iron is mined in northern Lebanon. Indications of petroleum have been found, but no successful wells have been drilled. Phosphates, copper, nickel, lead, antimony, and chrome also exist.

TRANSJORDAN

Transjordan comprises that part of old Palestine east of the Jordan River and the Dead Sea. It was included in the Mandate for Palestine, but is not open to Jews for the establishment of a national home.

Area and Population. As the boundaries have not yet been formally established, an estimate of the area cannot be given. The population, consisting mostly of Arabs, numbers about 300,000, 95 per cent of whom are of the Moslem faith.

Government. Transjordan is governed by local Arab Administration under an Amir who is assisted by an Executive Council. The British High Commissioner under the Palestine Mandate is responsible for the territory.

Resources and industries. Except for a strip along the Jordan River and the Dead Sea, the region is largely desert. Agricultural and pastoral products, phosphate and potash, are the only resources, with the possibility of oil in the south.

TRINIDAD

The British Crown Colony of Trinidad, which includes Tobago administratively, has an area of 1,972 square miles; population, estimated 1926, 397,100. The Governor is assisted by an Executive Council and a Legislative Council. Cacao occupies the greatest acreage; sugar cane, coconuts, and coffee are grown, and a considerable amount of land is devoted to pasturage. Natural asphalt is yielded by the famous "pitch lake" of Trinidad, and considerable oil is produced in the southern and southeastern part of the island.

TUNISIA

Area and Population. The area is about 48,300 square miles, and includes a large portion of the Sahara Desert.

Climate. Climatic conditions are similar to those in Algeria. Rainfall on the coast, and in the valleys between the Atlas ranges, is moderate, but sufficient for agriculture.

Population. Inhabitants number 2,159,708, with about 60,000 French, including the army of occupation. There are a great many Italians, but the majority of the population consists of Bedouin Arabs and Kabyles.

Government. Tunisia is a French protectorate under the administration of a native Bey. The government is carried on under the direction of a French Resident-General.

Agriculture is the chief industry. Wheat, barley, oats, and fruits are the principal products. Olive trees are numerous, and considerable olive oil is produced. The principal fruits grown are dates, almonds, grapes, oranges, and lemons. Stock-raising is an important industry, though the number of sheep and goats is insignificant when compared with that in Algeria. Large numbers of camels are raised.

Forest products are cork and timber. Total forest area, about 2,740,000 acres; cork forests, in northwest, cover 617,440 acres.

Fisheries employ many hands, chiefly Italians and Tunisians. Sardines, anchovies, allaches, and tunny are the important catches.

Mineral resources are being steadily developed. Lead, zinc, iron, manganese, phosphates, and fine marble are produced. The phosphate of lime output is increasing.

Manufactures. Native industries are the spinning and weaving of wool, carpet weaving, leather tanning and working, and pottery making. Other products are slippers, matting, and silks.

TURKEY

Area and Population. The area of Asiatic Turkey before the World War was about 700,000 square miles. Since then it has been reduced to 294,415. The population is 13,660,275. Before the war it was 19,382,900. Arabs predominate, but Turks are very numerous in western and northeastern Asia Minor; Kurds, on the Persian Frontier; Armenians, in eastern Asia Minor; Greeks and Jews, in the western Coast Towns.

Physical Features. Dominant features are the elevated plateau of Asia Minor, extending eastward into highlands of Kurdistan and Armenia, culminating in the snow-capped, craterless, volcanic Mount Ararat (16,925 feet), and the western highlands of Arabia. The north coast of Asia Minor is skirted by the Pontine Mountains; the south by the Taurus ranges swinging up to northeast. West coast region is broken by broad valleys. Great central plains of interior plateau, west and east of Taurus ranges, are diversified by volcanic uplifts, and contain large salt lakes.

Climate. Except in coastal regions of the west and south, Asia Minor has a trying climate—damp and enervating on north coast—with hot, dry summers and long, cold winters, ranging to extremes in interior.

Government. The Republic of Turkey is governed by the Grand National Assembly, in which is vested all legislative and executive power, and which is elected every four years by the people. Each assembly exercises its executive power through a President, elected by itself, to act throughout its life. He is President of the Republic, ipso facto President of the Assembly, nominates the Council of Ministers, and is responsible, with the cabinet, to the Assembly.

Agriculture. The coastal regions of Asia Minor are the most productive sections. Farming methods, on the whole, are most primitive. The leading crops are tobacco, cereals of all kinds, cotton, figs, olives, grapes, and other fruits, filberts and other nuts. Coffee, madder, opium, gums, and attar of roses also produced. Coffee is grown chiefly in southwestern Arabia; opium in Konia; tobacco along Black Sea coast. Silkworms are extensively raised in Brusa, and the mulberry tree is cultivated for their sustenance. Large areas are suitable for grazing, and horses, cattle, sheep, and Angora goats are reared in large numbers. The camel is the ordinary beast of burden, being especially adapted to desert conditions.

Forests. The principal forest areas, totaling over 10,500,000 acres, are in the Izmir (Smyrna) territory and the vilayets along the Black Sea coast where the mountain slopes are thickly covered with oak, ash, beech, pine, fir, larch, cedar, and other trees.

Fishing is extensively carried on, the principal products being sponges from the Mediterranean, and mother-of-pearl and pearls from the Red and Arabian Seas.

Minerals are abundant, but practically untouched. They include coal, iron, salt, gold, chrome, silver, lead, zinc, manganese, antimony, arsenic, copper, borax, meerschaum, kaolin, emery, mercury, lithographic stone.

Manufactures are chiefly domestic—leather, saddlery, swords, firearms, coarse linen, woolen and cotton goods, carpets, wine, silver and gold thread, lace, brass-turned and beaten-copper ware. Wine, olive oil, coffee, silk cocoons, barley, opium, madder, valonia, etc., are prepared for export. In Istanbul (Constantinople) rugs, brass and copper utensils, paper, glass, iron goods are produced.

UNION OF SOCIALISTIC SOVIET REPUBLICS

Area and Population. The area of the U. S. S. R. is estimated to be 8,238,348 square miles, and includes 6,530,852 square miles of Asiatic U. S. S. R. The population is 157,611,300, of which 122,114,545 are in Europe.

Physical Features. The surface of the Union is in general a succession of lowland plains, deeply cut by ravines, and sloping gradually toward the Baltic, White, Black, and Caspian seas. It attains a height of 1,100 feet in the Valdi Hills (between Leningrad and Moskva (Moscow) from which as a center most of the large rivers radiate. The Ural Mountains are a natural boundary with Asia on the East. The Caucasus Mountains are by some considered the Asiatic boundary at the south. The Volga, over 2,200 miles long, is the largest river in Europe, flowing through the heart of U. S. S. R. east and southeast into the Caspian Sea. Lake Ladoga, on the Finland border, is the largest lake in Europe, covering 7,000 square miles.

In Asia, the surface of the country presents a series of mountains, plateaus, fertile plains, and treeless tundras. It comprises three natural divisions. At the south, a highland region culminates in mountain chains along the borders of Persia, Afghanistan, and China. The Arlo-Caspian basin of Turkestan merges into the Kirghiz steppe on the north. The vast northern region of Siberia extends from the Urals east to Bering Strait. The tundras along the Arctic are constantly frozen, but bear moss, lichens, and stunted shrubs and provide fair pasturage in summer. South of the tundras is a large forest area merging into the fertile plains and plateaus of the steppes.

Climate. The climate of European U. S. S. R., despite the latitude through which the country extends, is very uniform, with hot summers and cold winters, the seasons varying in length in different locations. Rainfall ranges from 14 inches in the south to 25 inches near the Baltic, but decreases rapidly toward the east. Asiatic U. S. S. R. has a climate that is on the whole much more severe. Winters are colder and longer, and summers in the interior are hot.

Government. The Union of Socialistic Soviet Republics is, as its name implies, a union of individual states. Supreme governmental authority is vested in the Congress of Soviets, composed of representatives of town and provincial Soviets. The Congress of Soviets elects a Central Executive Committee of two bodies: the Council of the Union and the Council of Nationalities. The last named Committee is the actual power in the Union.

The government of each republic is in general the same as that of the Union. The Union conducts all foreign negotiations, establishes internal systems of trade and economy, directs the armed forces, and outlines the development and use of land and natural resources.

Agriculture is the leading industry, grains, chiefly wheat, rye, and oats, and potatoes and flax are the chief crops. Grains are now a government monopoly. The territory is normally depended upon for two-thirds of Europe's wheat. Cotton, sugar beets, hempseed, sunflower seed, and tobacco are also grown extensively and live stock are bred in nearly all parts of the country, especially in Europe.

Forests are extensive, over a billion acres being estimated as exploitable.

Mining. Coal, manganese, iron, copper, asbestos, zinc, lead, gems, and gold are mined. Ordinarily the region supplies the greater part of the world's platinum and considerable petroleum.

Manufacturing is under State control, all industries and capital having been confiscated and organized in syndicates and trusts. Enterprises are leased to individuals or corporations. Iron and steel, textiles, flour, sugar, and refined petroleum are some of the important products.

UNION OF SOUTH AFRICA

Area and Population. The Union (not including its dependency, the Southwest Africa Protectorate) has an area of 472,347 square miles. Population is 6,928,580.

Climate. The climate is generally temperate—except toward the north, where it becomes hot and unhealthful at low altitudes. On the Transvaal plateau the mean annual temperature ranges from 73° in summer to 53° in winter. The climate is generally dry, except immediately along the coast.

Government. The Union of S. Africa is one of the self-governing Dominions of the British Empire. The government is administered by an Executive Council who advise the Governor-General. Legislative power is vested in a Parliament of two houses. Each province has an elected Provincial Council and an appointed Administrator.

Agriculture. Recurrent seasons of drought make agricultural progress difficult, but much has been done by irrigation and dry farming. Stock-raising is one of the chief sources of wealth.

The leading crops are corn, wheat, oats, barley, rye, potatoes, and tobacco in Cape Province; sugar, tea, tobacco, maize, and fruits in Natal; maize, wheat, tobacco, potatoes, barley, and oats in Transvaal; and maize, Kaffir corn, oats, wheat, barley, and rye in Orange Free State. The acreage devoted to cotton and sugar is increasing.

Forests. Timber resources are not extensive. Bark for tanning is the principal product.

Fisheries. The food fishes caught in South African waters are of considerable importance, and large quantities are exported.

Minerals lead in value among the products of the Union. Gold and diamonds are most important. Other products are coal, tin, silver, copper, salt, asbestos, lime, gypsum, graphite, magnesite, manganese, lead, flint. The great gold region is in the Transvaal, and the Cape Province is the largest producer of diamonds.

Manufactures. Steady progress is being made in the manufacture of articles for local use—dairy products, leather, soap, cement, dynamite, matches, pottery, tobacco, starch, rope, beer, wine, spirits, furniture, vehicles, brooms, brushes, etc.

UNITED STATES

Area and Population. The total land area of continental United States is 3,026,789 square miles, of which the total water area is 53,015 square miles. East and west the greatest extent is 2,780 miles, and north and south 1,600 miles.

Population.	Year	Population
	1900	75,994,575
	1910	91,972,266
	1920	105,710,620
	1930	122,698,190

Topography. The topography of the United States, taken as a whole, is comparatively simple. A general view of the surface reveals a great river valley extending from the northern to the southern limits, and bordered on each side by a great mountain system. On the west, the system, more massive, rugged, high, and extended, rises almost abruptly from the Pacific. The mountains on the east are separated from the Atlantic by a plain sloping to the sea, narrow in the north and increasing in width toward the south. These mountains are older, the heights rounded, and the altitudes much less than in the western system. The rolling lands of the intervening valley rise toward the east and the west, from low altitudes along the river to high broken plateaus which merge with the mountains. The valley slopes to the south, where the lowlands of the the river continue along the Gulf Coast and unite with the Atlantic lowlands.

Climate. The climate of continental United States varies according to the wide extent of the country north and south, the surface configuration, and the influence of oceans and lakes. Lying in the southern half of the temperate zone, the climate corresponds generally with the degree of latitude, moderate in the north, and increasing in warmth toward the south. Proximity to bodies of water reduces the annual range of temperature considerably; mountainous conformation and high altitudes on the contrary cause a great increase in both the daily and annual range.

Government. The United States is a Federation of sovereign states, with a central government based on a constitution ratified by each State. The Federal Government is divided into three departments, the Executive, the Legislative, and the Judicial, vested respectively in the President assisted by a Vice-President and a Cabinet of ten Secretaries; the Congress, consisting of a Senate and a House of Representatives; and the Supreme Court, nine Circuit Courts, a Court of Claims, and a Court of Customs Appeals.

Agriculture. The great agricultural lands of the United States are concentrated in the west central part of the Mississippi Valley. The states of Kansas, Missouri, Nebraska, Iowa, North and South Dakota, and Minnesota contain more than one-fourth of the total farm land of the United States. Including the states south of Missouri and Kansas, one-half of the total farm land of the country is accounted for. Outside the Mississippi Valley, the South Atlantic States form another great agricultural region.

The three great agricultural products of the United States are the cereals, hay and forage, and cotton. The cereals predominate in the north and central Mississippi Valley; hay and forage in the north and middle Atlantic states, and in the Rocky Mountain States; cotton in the South Atlantic States and southern states of the Mississippi Valley. The products of the Pacific States are about evenly divided between cereals, hay and forage, and fruit and nuts. Other great crops of the United States are vegetables, including potatoes, flowers and plants and nursery products, tobacco, and sugar. The United States is the greatest wheat and corn producer in the world.

Coinciding with the great corn-producing regions of the valley are the swine-raising regions, Iowa leading all others as a hog producer. Vast numbers of sheep are raised on the semi-arid plateau of the northwest, and also in the east, principally in Ohio. Great herds of cattle are raised in the southwest on the great ranches in the semi-arid prairie region, and fattened for market in the central states.

Forests. The merchantable timber of the great original forests of the United States has been reduced by more than one-half up to the present time. The rate of cutting is 36 billion board feet a year, which is four times the annual growth. The chief timbers are pine, fir, hemlock, spruce, cedar, cypress, oak, ash, and hickory.

Fisheries. The value of the fishery products of the United States amounts to a vast sum annually. The important fishing grounds and catches are in the Columbia River district, where salmon is the important species, and on the north Atlantic coast where oysters and cod are the chief products.

Minerals. Our mineral resources are rich and varied. The precious metals are found principally in the Rocky Mountain division; coal in the Appalachian, Mississippi Valley, and eastern Rocky Mountain divisions; iron ore in the northern Lake States; and copper in Arizona, Montana, Michigan, and Utah.

Of the metals, iron ore is the first in value, followed by copper, silver, gold, zinc, lead, aluminum, platinum, quicksilver, manganese, antimony, and tungsten. Of the nonmetals, coal, petroleum, brick and tile, natural gas, cement, stone, salt, sulphur, lime, and gypsum are the most valuable products. The quarries produce limestone, granite, sandstone, marble, slate, and clays.

Manufactures. The manufacturing industry is concentrated in the Middle Atlantic and the East North Central States, New York, Pennsylvania, Illinois, Massachusetts, Ohio, New Jersey, Michigan, Wisconsin, Indiana, and Connecticut providing about 70 per cent of the total value of manufactured products of the United States. The Western States, however, particularly Missouri and California, are showing a rapid rate of development.

Slaughtering and meat-packing are the leading industries of the country. Next in importance are the foundries and machine shops, the lumber industries, steel mills, flour mills, printing and publishing establishments, and textile mills. The list of industries is long and varied, and the value of products in each is enormous.

URUGUAY

Area and Population. The area of Uruguay is 72,153 square miles. The population of the Republic is 1,808,286, of whom about 17 per cent are foreign-born, those of European blood being chiefly Italian and Spanish.

Physical Features. Topographically, Uruguay is rather a continuation of the mountain and plateau system of southwestern Brazil than part of the Argentina pampas formation. It has, however, no lofty mountains, the highest range, the Acegua, reaching in one peak an altitude of a little over 2,000 feet.

Along the Atlantic, the coast region is low and sandy, with numerous lakes and extensive swamps dotting the plain. The interior of the country is, in general, an undulating, grassy plateau traversed by chains of hills luxuriantly covered with vegetation. Uruguay has a magnificent system of waterways, including, besides many small streams, eleven rivers of considerable size.

Climate. The climate of Uruguay as a whole is subtropical. In the maritime regions, it is equable, with moderate summer heat and mild winters. The mean annual temperature at Montevideo is 62°, ranging from 51.8° for July, to 73° for January. Rainfall averages 40 inches, but is very unevenly distributed.

Government. Executive power is divided between the President and the National Administrative Council, both elected by direct male suffrage. Legislative power rests with a Parliament of two houses—meeting annually.

Agriculture. The most characteristic feature of Uruguay is its vast extent of pasture lands. The rearing of cattle and sheep, and the preparation of animal products, are the leading industries. Farm crops are raised on a large scale only in the southern departments, the principal products being wheat, oats, corn, barley, flaxseed, and tobacco. Olives and all fruits and vegetables of the temperate zone are successfully cultivated.

Forests. Stands of willow, poplar, mimosa, and bamboo are found along the rivers, and the ombu tree thrives where other trees will not take root.

Minerals. Gold mines are worked chiefly in the north, and silver, copper, lead, magnesium, coal, and semi-precious stones are found.

Manufactures. Preparation of animal products—jerked beef, frozen meat, beef extract, canned tongue, hides and skins, tallow, wool—is the chief manufacturing industry.

VENEZUELA

Area and Population. Venezuela stretches along the Caribbean coast of northern South America, between British Guiana on the east and Colombia on the west, and has an area of 393,874 square miles. The population is 3,053,497, nearly one-seventh of the people being native Indians, of whom about three-fourths are civilized.

Physical Features. The topographical features of Venezuela, in general terms, may be said to comprise a mountainous section in the northwest; a central region of broad, grassy plains in the Orinoco valley; and, in the southeast, a vast, densely forested, mountainous area. In the northwest, the Andes Mountains extend into Venezuela, from Colombia, in two chains.

The Orinoco, which has its entire course in Venezuela territory, is one of the great rivers of the world, being exceeded in volume, in South America, only by the Amazon and the Paraná.

Climate. Like other South American tropical countries, Venezuela has a climate dependent upon elevation rather than upon latitude. The hot zone, with a mean annual temperature of 77°, extends up to an elevation of about 3,000 feet. On the coast, the mean is 84°; at Carácas (elevation 3,018 feet), it is 77°; at Mérida, 59°. Above the hot zone, to a height of about 6,600 feet, is a belt with an average temperature of about 65°, ranging from subtropical to temperate, the coldest months being December to January; the warmest, April and May.

Rainfall is variable, being heaviest on the low, hot coast areas; while on the upland slopes, under the trade winds, it is abundant but not excessive.

Government. Executive power is vested in a President, who is elected by the Congress for a seven-year term and assisted by a Cabinet; legislative, in a Congress of two elected houses.

Agriculture. Although minerals are interesting an increasing proportion of the people of Venezuela, agriculture takes rank as the leading industry, employing about one-fifth of all the people.

Coffee is the leading agricultural product, estates numbering about 25,000, and nearly 500,000 acres are devoted to cultivation of the shrub. Cacao, grown in the lowlands, is next to coffee in importance. The annual exportation of cane sugar is large. Rice, maize, wheat, barley, beans, potatoes, and other vegetables, tobacco, and a little cotton of inferior quality are also grown.

Stock-raising monopolizes attention in the great pastoral regions of the llanos, but could be developed to much greater proportions. The stock comprises cattle, sheep, goats, horses, mules, asses, and pigs. Cattle and hides are important items in the export trade.

Forests. Nearly one-half of the area of the Republic is covered with equatorial forests. Many of the trees are of great commercial value, yielding rubber, valuable timber, beautiful cabinet woods, dyewoods, copal and other gums and resins, tonka-beans, and medicinal products such as cinchona, copaiba, and sarsaparilla.

Fisheries. Pearl-fishing, which is carried on around the islands off the coast, employs a considerable number of people.

Minerals. For many years gold, copper, silver, iron, asphalt, petroleum, salt, and coal have been profitably worked in Venezuela. The principal petroleum fields lie in the Caribbean district, around lake Maracaibo, in the Orinoco River delta, and near the mouth of the San Juan River.

Gold is found chiefly in the State of Bolivar, on the Guiana frontier. Silver is also produced. Asphalt in large quantities is taken from Lake Bermudez, this lake being about 1,000 acres in extent, larger in area than the famous lake on the British island of Trinidad, but much shallower. Copper mines are numerous, and there are deposits of tin, jet, etc.

Manufactures. The principal manufactured products are cotton textiles and coarse fiber sacks. The preparation of salt for market, and the manufacture of matches, are government monopolies.

Commerce is chiefly with the United States, which furnishes about half of the imports and buys about one-third the exports. In recent years the imports from the United States have fallen off, and those from European countries increased.

VIRGIN ISLANDS

This group, lying east of Porto Rico, was formerly known as the Danish West Indies, but was sold by Denmark to the United States for $25,000,000, during the World War, largely because of the burden of expense of mobilization considered necessary against possible German invasion. The formal transfer was made March 31, 1917. The group comprises about 50 islands (area 133 square miles), of which the three principal ones are St. Croix, St. Thomas, and St. John. Total population, 22,012, chiefly negroes. Sugar cane is the principal product; other crops are guinea grass, vegetables, corn, beans, hay, cotton, arrowroot, and limes. Considerable live stock is reared. The bay tree flourishes on St. John, and bay rum is manufactured. St. Thomas (formerly Charlotte Amalie), on St. Thomas, is chief of the three cities in the group. The other cities are Christiansted and Frederiksted, both on the Island of St. Croix.

WINDWARD ISLANDS

The British Colony of the Windward Islands, ruled by a Governor, resident at St. George's, Grenada, has a total area of 516 square miles, with a population of 183,557. The colony consists of the islands of Grenada, St. Vincent, the Grenadines, and St. Lucia. With the exception of a Common Court of Appeal, the islands have their own institutions, at times acting together for other common purposes, however. Cocoa, arrowroot, spices, cotton, sugar, and rum are the chief products.

YUGOSLAVIA

Area and Population. Total area is 96,134 square miles. Population, 13,462,500.

Physical Features. The surface of the Kingdom is largely mountainous. It is drained chiefly by the Danube and its tributaries—the Morava in the southeast, the Sava and Drava in the west-central and northwest, and the Danube and Tisza in the north.

Climate. The climate is inclined to extremes of heat and cold.

Government. Yugoslavia is a limited monarchy, the executive power resting with the king and the legislative power in a single-chambered National Assembly.

Agriculture is the main industry of the people. The cultivated area equals about 55 per cent of the land; grass lands constitute 14 per cent, pastures 23 per cent, and vines 1.47 per cent. The greatest acreage is devoted to corn, with wheat second and oats third. Barley, grapes, rye, plums, apples, olives, and tobacco are also grown in quantities.

Forests. There are about 18,000,000 acres of forests in the Kingdom, consisting largely of beech, oak, and fir.

Minerals. Coal, lignite, iron, copper, gold, lead, chrome, antimony, and cement are found in Yugoslavia. Oil is produced in Croatia.

Manufactures. Flour milling is the principal manufacturing industry, and there are many large mills in the country. Brewing and distilling, weaving, tanning, bootmaking, pottery, iron-working, and carpet weaving are also carried on. The wool carpets of Pirot in southeastern Serbia are famous the world over. The chief imports of Yugoslavia are metals and machinery, agricultural products, animal products, and chemicals. The exports include corn, wheat, cattle, horses, swine, prunes, and timber.

CITIES AND TOWNS OF THE UNITED STATES

(Alphabetically Arranged by States)

The letter and figure following the name of each place is the index to its location on the map
